Receptor Purification Procedures J. Craig Venter, Len C. Harrison, 1984-01-01 *Receptor Biochemistry and Methodology*, 1988 The Human Genome Project United States. Congress. House. Committee on Science. Subcommittee on Energy and Environment, 2001 *Steroid Receptor Methods* Benjamin A. Lieberman, 2001-08-10 A distinguished team of principal investigators and their associates describe in step by step detail a cross section of the latest research techniques available for studying the endocrine system As a basis for sophisticated biochemical analysis of receptor properties the contributors provide methods for the production and purification of a variety of receptors including progesterone glucocorticoid and androgen Other protocols allow the reader to experiment with DNA binding characteristics hormone binding assays and the use of combinatorial chemistry for drug discovery A series of novel methods utilizing the latest advances in immunochemistry yeast two hybrid screening and fluorescence are included for the detection and analysis of a variety of cellular proteins that influence steroid receptor effectiveness

Regulation of G Protein Coupled Receptor Function and Expression Jeffrey L. Benovic, 1999-11-12 Recent advances in molecular and cell biology enabling the cloning expression and mutagenesis of signal transduction proteins has prompted an explosion of knowledge in the field of receptor regulation facilitating the discovery of new classes of regulatory proteins and providing a basis and means for manipulating receptor function through multiple intracellular targets This volume covers methods used to examine how the function s of receptors are regulated Understanding how to regulate the function and expression of these receptors is critical in determining how to modify receptors and to translocating receptors away from the cell surface and its recycling Individual chapters focus on specific techniques used to characterize receptors epitope tagging measurement and analysis of receptor phosphorylation analysis of the kinetics of receptor desensitization and assessment of receptor G protein coupling the role of regulatory proteins receptor kinases and phosphatases arrestins in modulating receptor function and the methods used to measure receptor trafficking ligand binding immunofluorescence and expression transcriptional and translational regulation Covers a broad range of important concepts and methodologies which are current in the study of G protein coupled receptors GPCRs G protein coupled receptors make up over 40% of the current pharmacological targets Provides detailed protocols for executing various strategies and offers informed judgments as to what approaches are and aren t useful Volume Editor Jeffrey Benovic is a dominant world leader in the study of receptor regulation of GPCR kinases and is highly respected in the field

Amino Acids, Peptides and Proteins J H Jones, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by

1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Methods of Biochemical Analysis David Glick, 2009-09-25 Biochemical analysis is a rapidly expanding field and is a key component of modern drug discovery and research. Methods of Biochemical Analysis provides a periodic and authoritative review of the latest achievements in biochemical analysis. Founded in 1954 by Professor David Glick, Methods of Biochemical Analysis provides a timely review of the latest developments in the field.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), Ion Channel Reconstitution C. Miller, 2013-11-09 It is now over 30 years since the idea of ion conducting pores burst on the electrophysiological scene. 15 years since these were generally realized to be membrane spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made. During the past 5 years several integral membrane channel proteins have been purified in a functionally competent state: the nicotinic acetylcholine receptor, the Na channel, mitochondrial VDAC and a variety of porins. The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades: isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure. This is always a daunting task, all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins. In this volume which can be considered a biochemically slanted companion to Sakmann and Neher's Single Channel Recording I have tried to present a view of the current landscape of ion channel reconstitution. These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work.

Immunoassay Bozzano G Luisa, 2012-12-02 During the last few years immunoassay has gained tremendous popularity in clinical and research laboratories and has been applied to determine hormone, enzyme, protein, drug and infectious agents. The aim of this book is to provide clinical laboratory personnel and students with an understanding of the principle of immunoassay and the production of reagents for immunoassay. Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70. **Nuclear Receptors**, 2003-11-25 Nuclear Receptors are inducible transcription factors that mediate complex effects on development, differentiation and homeostasis. They regulate the transcription of their target genes through binding to DNA sequences.

Analysis of Nuclear Receptor Ligands Structure Function Analysis of Nuclear Receptors Analysis of Nuclear Receptor Co Factors and Chromatin Remodeling **Journal of Pineal Research** ,1984 Receptors and Hormone Action Bert O'Malley,Lutz Birnbaumer,2013-10-22 Receptors and Hormone Action Volume II is part of a multivolume series that summarizes advances in the field of hormone action The articles contained in these books are oriented toward a description of basic methodologies and model systems used in the exploration of the molecular bases of hormone action and are aimed at a broad spectrum of readers including those who have not yet worked in the field as well as those who have considerable expertise in one or another aspect of hormone action The book opens with a chapter on the relationship between steroid hormone receptor binding and biologic response This is followed by separate chapters on conformational forms of the estrogen receptor the relationship of early responses of the cell to estrogen to DNA synthesis the role of receptors in the anabolic action of androgens and biology of progesterone receptors Subsequent chapters deal with the molecular structure and analysis of progesterone receptors the regulation of gene expression by glucocorticoid hormones studies of the aldosterone receptor in the adrenalectomized rat kidney and existence of gonadal steroid receptors in brain and pituitary tissue Biochemical Messengers D. Hardie,2013-12-01 The central theme of this book is that systems of cell cell signalling via nerves hormones local mediators and growth factors are not distinct phenomena but branches of one general mechanism These topics therefore can and should be discussed in an integrated manner and the division of cell signalling studies into separate pigeonholes such as neuroscience endocrinology or cancer biology is unnecessary if not counterproductive I also believe it to be unfortunate that there is not a collective term to describe neurotransmitters hormones local mediators and growth factors other than clumsy phrases such as extracellular signal molecule The lack of a short and distinctive word for these entities genuinely hampers people from thinking about them in an integrated way Having decided that it was presumptuous to invent a new term I have chosen in this book the term first messenger to cover all types of extracellular signal molecule because of the widespread acceptance of the term second messenger to represent the intracellular signal molecules that are produced in response to many of them I have given the book the title biochemical messengers which is a global term to cover both first and second messengers The impetus for writing the book came as must often be the case when I had to put together a course on cell cell signalling for biochemistry students at the University of Dundee Neuropeptide Technology P. Michael Conn,2013-10-22 Methods in Neurosciences Volume 5 Neuropeptide Technology Gene Expression and Neuropeptide Receptors discusses procedures and tools of assay useful for the identification purification and quantification of neuropeptides and their receptors This volume is divided into two sections neuropeptide gene expression and neuropeptide receptors In these sections this book specifically discusses the assays for peptide products of somatostatin gene expression molecular assays for rat thyrotropin releasing hormone gene and structure expression and chromosomal localization of human gene The gastrin releasing peptide or mammalian bombesin semiquantitative analysis of cellular

somatostatin mRNA Levels and atrial natriuretic factor receptor assays are also elaborated This text likewise covers the receptors for opioid peptides in brain and autoradiography of somatostatin receptors in rat cerebellum This publication is beneficial to neuroscientists and students intending to acquire knowledge of gene expression and neuropeptide receptors

The Receptors P. Michael Conn, 2014-05-10 The Receptors Volume II deals with receptors for somatostatin vitamin D insulin and animal viruses as well as for the 2 adrenergic and Ah systems The significance of translational modifications of receptor ligands is discussed along with the mechanisms of receptor ligand interactions The role of receptors in development and their regulation by tumors are also considered Comprised of 12 chapters this volume begins with a detailed account of the vitamin D receptor paying particular attention to its biochemical and physical properties as well as its mechanism of action The discussion then turns to experimental discrimination between alternative mechanistic models for the receptor mediated stimulation of adenylate cyclase the role of microaggregation in hormone receptor effector interactions and the biology and biochemistry of the Ah receptor Subsequent chapters explore the interactions of animal viruses with cell surface receptors insulin receptors determination of the size of neurotransmitter receptors by radiation inactivation target size analysis and protein glycosylation and receptor ligand interactions This book will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology endocrinology and pharmacology

The Lectins Irvin Liener, 2012-12-02 The Lectins Properties Functions and Applications in Biology and Medicine is a 10 chapter text that deals with the advances in research studies on the properties functions and applications of lectins in biology and medicine The first two chapters consider the historical development physicochemical properties isolation and remarkable specificity toward sugars of lectins These topics are followed by a discussion on the molecular aspects of protein evolution with a particular emphasis on lectins which provide an excellent example of a family of homologous proteins The following chapters explore the diverse biological activities of lectins and how these properties are utilized for the isolation and characterization of carbohydrate containing compounds in solution and on cells A chapter focuses on the functions of lectins in their natural milieu This text further covers the importance of lectins in nonplant systems as exemplified by lectins that occur in vertebrates slime molds and bacteria The last chapter highlights the nutritional significance of the occurrence of lectins in plant foods such as legumes This book is an ideal source for organic chemists protein researchers and workers in the fields of biology and medicine
