## **Regulating Pollution:**

*Regulating Pollution* J. Clarence Davies, III, Jan Mazurek, 1998-04 Focusing largely on federal environmental efforts this report provides a sound basis for considering the future of the pollution control regulatory system It describes and evaluates the legislation administrative decisionmaking and federal state division of labor that are the main elements of the U S regulatory process The overall system is examined and evaluated to determine whether the most important problems have been targeted and pollution levels reduced and whether the system has been effective and cost efficient has been responsive to social values and is prepared to deal with future problems

**How the Chinese System of Charges and Subsidies**

**Affects Pollution Control Efforts by China's Top Industrial Polluters** Hua Wang, Ming Chen, 1999 China s unique combination of emissions charges and pollution abatement subsidies has given China s most heavily polluting industrial firms incentive to invest in pollution abatement

**Regulating Water Quality** Jodee Kuske, 1991

**Pollution Control for the Petrochemicals Industry** M. Brett Borup, 2018-01-18 The petrochemicals industry is very complex and requires considerable knowledge of the individual processes to develop effective pollution control plans and processes Information in this small book is intended to provide a base from which one can build It is not exhaustive in describing the segments of the industry or pollution control techniques however it does provide a basic knowledge that should lead to intelligent environmentally sound solutions to pollution prevention control and treatment

**Reauthorization of the Federal Water Pollution Control Act** United States. Congress. House. Committee on Public Works and Transportation. Subcommittee on Water Resources, 1991

Integrated Pollution Control Adrian Smith, 2018-12-21 First published in 1997 This book presents a detailed analysis of the Integrated Pollution Control IPC policy process Using developments in the late nineties in the public policy literature to analyse and produce answers to why the government introduced IPC and how has IPC policy been implemented

*The Theory and Practice of Command and Control in Environmental Policy* Peter Berck, 2018-01-12 This title was first published in 2003 Economists have had increasing success in arguing the merits of market based approaches to environmental problems By making polluting expensive market based approaches provide polluters with incentives to clean up rather than mandates to stop polluting These approaches include pollution taxes transferable emissions permits and subsidies for pollution abatement The purpose of this volume is to explore the situations where Command and Control CAC may not be all bad and in fact might even have some advantages over market based instruments MBI

*Chasing the Wind* Noga Morag-Levine, 2009-01-10 The Federal Clean Air Act of 1970 is widely seen as a revolutionary legal response to the failures of the earlier common law regime which had governed air pollution in the United States for more than a century Noga Morag Levine challenges this view highlighting striking continuities between the assumptions governing current air pollution regulation in the United States and the principles that had guided the earlier nuisance regime Most importantly this continuity is evident in the centrality of risk based standards within contemporary American air pollution regulatory policy

Under the European approach by contrast the feasibility based technology standard is the regulatory instrument of choice Through historical analysis of the evolution of Anglo American air pollution law and contemporary case studies of localized pollution disputes Chasing the Wind argues for an overhaul in U S air pollution policy This reform following the European model would forgo the unrealizable promise of complete perfectly tailored protection a hallmark of both nuisance law and the Clean Air Act in favor of incremental across the board pollution reductions The author argues that prevailing critiques of technology standards as inefficient and undemocratic instruments of command and control fit with a longstanding pattern of American suspicion of civil law modeled interventions This distrust she concludes has impeded the development of environmental regulation that would be less adversarial in process and more equitable in outcome

*Regulating Financial Innovation* Christopher Ruof,2023-08-30 This book explores the impact of Fintech on the information asymmetry between the financial regulator and the markets It details the growing regulatory mismatch and how Fintech exacerbates the pacing problem where the regulator struggles to keep up with innovation With information as a point of reference the book adds a new perspective on the latest phenomenon in financial innovation and presents a novel framework for navigating structural changes in the financial sector Based on this analysis a number of proposals to reduce the information gap and avoid regulatory mismatch are discussed Thereby new and promising regulatory concepts such as regulatory sandboxes and SupTech applications are also covered This book provides a practical framework for regulatory responses to financial innovation It will be relevant to researchers and practitioners interested in financial technology and regulation

**Pollution Control in United States** J. Clarence Davies,2014-04-04 Pollution control a key component of U S environmental policy has made important progress in recent decades Yet important problems remain and there is need for improvement in the pollution control regulatory system This book is the most extensive evaluation of that system ever produced It reveals many strengths and accomplishments but also illustrates serious shortcomings and the need for reform The volume emerges from three years of research on a fragmented system of institutions statutes and procedures that is often inefficient and ineffective hobbled by misplaced priorities Part I provides an in depth description of this system centered on the federal Environmental Protection Agency and the labyrinthine laws it must implement The authors evaluate the federal legislative administrative decisionmaking and the state federal division of labor that defines the system Davies and Mazurek assess the effectiveness and efficiency of U S pollution control They discuss the performance of U S laws and regulations in comparison with those of other nations assess the ability of the U S pollution control system to meet future problems and consider proposals for reform and repair Within this far reaching analysis they include criteria that are often overlooked by policymakers and analysts including social values equity nonintrusiveness and public participation
