Regulation Of Cerebral Blood Flow

Katherine Elliott, Maeve O'Connor

Regulation Of Cerebral Blood Flow:

Cerebral Blood Flow in Acute Head Injury Georg E. Cold, 2012-12-06 During the last decade a multitude of studies concerning the dynamic changes in cerebral blood flow CBF cerebral metabolic rate of oxygen CMRO₂ and intracranial pressure ICP in the acute phase after head injury have been published These studies have been supplemented with studies of cerebral autoregulation CO₂ reactivity and barbiturate reactivity Other investigations include studies of cerebrospinal fluid pH bicarbonate lactate and pyruvate In this book experimental and clinical studies of the dynamic changes in CBF CMRO₂ CO₂ reactivity and barbiturate reactivity are reviewed The author's own clinical studies of the dynamic changes in CBF and cerebral metabolism are summarized and discussed and the therapeutical implication as regards the use of artificial hyperventilation sedation with barbiturate and mannitol treatment are discussed **Regulation of cerebral blood flow**

Alexander David Mendelow, 1978 **The Regulation of Cerebral Blood Flow** John W. Phillis, 1993-07-06 The Regulation of Cerebral Blood Flow presents a comprehensive review of recent literature on the mechanisms by which cerebral blood flow is matched to the metabolic requirements of the brain Topics covered include techniques for monitoring cerebral blood flow the intrinsic properties of cerebral vascular smooth muscle fibers the neuronal regulation of vascular tone metabolic factors released by brain cells and changes in cerebral blood flow regulation in the neonate and aged diabetics hypertensives and migraineurs The book will benefit neurologists neurosurgeons physiologists pharmaceutical manufacturers and others interested in this critical area of vascular function **The Cerebral Circulation** Marilyn J. Cipolla, 2016-07-28 This e book

will review special features of the cerebral circulation and how they contribute to the physiology of the brain It describes structural and functional properties of the cerebral circulation that are unique to the brain an organ with high metabolic demands and the need for tight water and ion homeostasis Autoregulation is pronounced in the brain with myogenic metabolic and neurogenic mechanisms contributing to maintain relatively constant blood flow during both increases and decreases in pressure In addition unlike peripheral organs where the majority of vascular resistance resides in small arteries and arterioles large extracranial and intracranial arteries contribute significantly to vascular resistance in the brain The prominent role of large arteries in cerebrovascular resistance helps maintain blood flow and protect downstream vessels during changes in perfusion pressure The cerebral endothelium is also unique in that its barrier properties are in some way more like epithelium than endothelium in the periphery The cerebral endothelium known as the blood brain barrier has specialized tight junctions that do not allow ions to pass freely and has very low hydraulic conductivity and transcellular transport This special configuration modifies Starling's forces in the brain microcirculation such that ions retained in the vascular lumen oppose water movement due to hydrostatic pressure Tight water regulation is necessary in the brain because it has limited capacity for expansion within the skull Increased intracranial pressure due to vasogenic edema can cause severe neurologic complications and death **Cerebral Vascular Smooth Muscle and its Control** Katherine

Elliott, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **Regulation of Cerebral Blood Flow in Health and Disease**
