Journal , 1920 Ribosomes Alexander Spirin, 2013-03-09 This book is based on an advanced course of lectures on ribosome structure and protein biosynthesis that I offer at the Moscow State University These lectures have been part of a general course on molecular biology for almost three decades and they have undergone considerable evolution as knowledge has been pro gressing in this field The progress continues and readers should be prepared that some facts statements and ideas included in the book may be incomplete or out of date In any case this is primarily a textbook but not a comprehensive review It provides a background of knowledge and current ideas in the field and gives ex amples of observations and their interpretations I understand that some interpre tations and generalizations may be tentative or disputable but I hope that this will stimulate thinking and discussing better than if I left white spots The book has a prototype it is my monograph

Ribosome Structure and Protein Biosynthesis published by the Benjamin Cummings Publishing Company Menlo Park California in 1986 Here I have basically kept the former order of presentation of the topics and the subdivision into chapters The contents of the chapters however have been significantly revised and supplemented The newly written chapters on translational control in prokaryotes Chapter 16 and eukaryotes Chapter 17 are added

Handbook of Graphs and Networks Stefan Bornholdt, Heinz Georg Schuster, 2006-03-06 Complex interacting networks are observed in systems from such diverse areas as physics biology economics ecology and computer science For example economic or social interactions often organize themselves in complex network structures Similar phenomena are observed in traffic flow and in communication networks as the internet In current problems of the Biosciences prominent examples are protein networks in the living cell as well as molecular networks in the genome On larger scales one finds networks of cells as in neural networks up to the scale of organisms in ecological food webs This book defines the field of complex interacting networks in its infancy and presents the dynamics of networks and their structure as a key concept across disciplines The contributions present common underlying principles of network dynamics and their theoretical description and are of interest to specialists as well as to the non specialized reader looking for an introduction to this new exciting field Theoretical concepts include modeling networks as dynamical systems with numerical methods and new graph theoretical methods but also focus on networks that change their topology as in morphogenesis and self organization The authors offer concepts to model network structures and dynamics focussing on approaches applicable across disciplines
