Reliability Evaluation Of Engineering Systems:

Reliability Evaluation of Engineering Systems Roy Billinton, 2013-03-09 This book has evolved from our deep interest and involvement in the development and application of reliability evaluation techniques Its scope is not limited to anyone engineering discipline as the concepts and basic techniques for reliability evaluation have no disciplinary boundaries and are applicable in most if not all engineering applications We firmly believe that reliability evaluation is an important and integral feature of the planning design and operation of all engineering systems from the smallest and most simple to the largest and most complex Also we believe that all engineers involved with such systems should be aware of and appreciate not only the benefits which can accrue from reliability assessment but also how such assessments can be made Our primary objective has been to compile a book which provides practising engineers and engineering graduates who have little or no background in probability theory or statistics with the concepts and basic techniques for evaluating the reliability of engineering systems It is hoped that the material presented will enable them to reach quickly a level of self confidence which will permit them to assimilate understand and appreciate the more detailed applications and additional material which is available in the journals and publications associated with their own discipline

Dependability of Engineering Systems Jovan M. Nahman,2013-03-09 This book is intended to provide the interested reader with basic information on various issues of the dependability analysis and evaluation of engineering systems with the principal goal to help the reader perform such an analysis and evaluation By the definition of the IEC International Standard 50 191 dependability is the collective term used to describe the availability performance and its influencing factors reliability performance maintainability performance and maintenance support performance Dependability is a term used for a general description of system performance but not a quality which could be expressed by a single quantitative measure There are several other quantitative terms such as reliability unreliability time specific and steady state availability and unavailability which together form a basis for evaluating the dependability of a system A system is taken as dependable if it satisfies all requirements of the customers with regard to various dependability performances and indices The dependability deals with failures repairs preventive maintenance as well as with costs associated with investment and service interruptions or mission failures Therefore it is a very important attribute of system quality The dependability evaluation is strongly based upon experience and statistical data on the behavior of a system and of its elements Using past experience with the same or similar systems and elements the prospective operation may be predicted and improved designs and constructions can be conceived Hence the dependability analysis makes it possible to learn from the past for better future solutions *Examples of the Reliability Evaluation of Electrical, Mechanical and Civil Engineering Systems*

Information-Based Manufacturing Michael J. Shaw,2012-12-06 Because of their mutually influencing interactions information systems and modern manufacturing systems are intertwined They have been so integrated that information systems have become an embedded and critical component of any effective manufacturing system The impact of the increasing focus on information permeates throughout the manufacturing life cycle from product conceptualization design process planning all the way to production order fulfilment and customer services For these reasons it is critical that we study information based manufacturing in its entirety crossing the traditional functional boundaries and building as much synergy between Information Systems IS Information Technology IT and manufacturing as possible This is the motivation for this book and to this end the purpose of this book is threefold to establish an up to date interdisciplinary research framework for information based manufacturing that builds on the research foundation from IS and IT and manufacturing research to develop a forward looking research agenda for information based manufacturing for identifying future directions for research and applications and to foster a joint academic and industrial research agenda in information systems and manufacturing by identifying the greatest synergy possible between academic research and industrial practices
