Reliable Plan Selection By Intelligent Machines:

Reliable Plan Selection By Intelligent Machines John E McInroy, Joseph C Musto, George N Saridis, 1996-02-29 This book derives techniques which allow reliable plans to be automatically selected by Intelligent Machines It concentrates on the uncertainty analysis of candidate plans so that a highly reliable candidate may be identified and used For robotic components such as a particular vision algorithm for pose estimation or a joint controller methods are explained for directly calculating the reliability However these methods become excessively complex when several components are used together to complete a plan Consequently entropy minimization techniques are used to estimate which complex tasks will perform reliably The book first develops tools for directly calculating the reliability of sub systems and methods of using entropy minimization to greatly facilitate the analysis are explained Since these sub systems are used together to accomplish complex tasks the book then explains how complex tasks can be efficiently evaluated Design Of Intelligent Control Systems Based On

Hierarchical Stochastic Automata Pedro Lima, George N Saridis, 1996-03-20 In recent years works done by most researchers towards building autonomous intelligent controllers frequently mention the need for a methodology of design and a measure of how successful the final result is This monograph introduces a design methodology for intelligent controllers based on the analytic theory of intelligent machines introduced by Saridis in the 1970s The methodology relies on the existing knowledge about designing the different sub systems composing an intelligent machine Its goal is to provide a performance measure applicable to any of the sub systems and use that measure to learn on line the best among the set of pre designed alternatives given the state of the environment where the machine operates Different designs can be compared using this novel approach Advances in Computational Intelligence Fei-Yue Wang, Derong Liu, 2006 Computational Intelligence CI is

a recently emerging area in fundamental and applied research exploiting a number of advanced information processing technologies that mainly embody neural networks fuzzy logic and evolutionary computation With a major concern to exploiting the tolerance for imperfection uncertainty and partial truth to achieve tractability robustness and low solution cost it becomes evident that composing methods of CI should be working concurrently rather than separately It is this conviction that research on the synergism of CI paradigms has experienced significant growth in the last decade with some areas nearing maturity while many others remaining unresolved This book systematically summarizes the latest findings and sheds light on the respective fields that might lead to future breakthroughs *Advances In Computational Intelligence: Theory*

A. Lever,Fei-Yue Wang,1998 Expensive and sophisticated machines such as wheel loaders are used for earth moving This book presents a robotic control approach to the computer control of wheel loader type excavators The unpredictable and dynamic rock excavation environment poses challenges for the design of the real time control algorithm The control method developed here is based on the analysis of human operators performance it applies neural networks fuzzy logic and finite state machines to embody human excavation strategies for on line bucket digging trajectory design A behavior based control architecture organizes operation of the modules to achieve quick system response **Multisensor Fusion** Rajive Joshi,Arthur C. Sanderson,1999 The fusion of information from sensors with different physical characteristics such as sight touch sound etc enhances the understanding of our surroundings and provides the basis for planning decision making and control of autonomous and intelligent machines The minimal representation approach to multisensor fusion is based on the use of an information measure as a universal yardstick for fusion Using models of sensor uncertainty the representation size guides the integration of widely varying types of data and maximizes the information contributed to a consistent interpretation In this book the general theory of minimal representation multisensor fusion is developed and applied in a series of experimental studies of sensor based robot manipulation A novel application of differential evolutionary computation is introduced to achieve practical and effective solutions to this difficult computational problem *Modeling, Simulation, And Control Of Flexible Manufacturing Systems: A Petri Net Approach* Kurapati Venkatesh,Mengchu Zhou,1999-01-29 One critical barrier leading to successful implementation of flexible manufacturing and related automated systems is the ever increasing complexity of their modeling analysis simulation and control Research and development over the last three decades has provided new theory and graphical tools based on Petri nets and related concepts for the design of such systems The purpose of this book is to introduce a set of Petri net based tools and methods to address a variety of problems associated with the design and implementation of flexible manufacturing systems FMSs with several implementation examples There are three ways this book will directly benefit readers First the book will allow engineers and managers who are responsible for the design and implementation of modern manufacturing systems to evaluate Petri nets for applications in their work Second it will provide sufficient breadth and depth to allow development of Petri net based industrial applications Third it will allow the basic Petri net material to be taught to industrial practitioners students and academic researchers much more efficiently This will foster

further research and applications of Petri nets in aiding the successful implementation of advanced manufacturing systems

Advanced Studies Of Flexible Robotic Manipulators: Modeling, Design, Control And Applications Yanqing Gao, Fei-yue Wang, 2003-08-14 Flexible robotic manipulators pose various challenges in research as compared to rigid robotic manipulators ranging from system design structural optimization and construction to modeling sensing and control Although significant progress has been made in many aspects over the last one and a half decades many issues are not resolved yet and simple effective and reliable controls of flexible manipulators still remain an open quest Clearly further efforts and results in this area will contribute significantly to robotics particularly automation as well as its application and education in general control engineering To accelerate this process the leading experts in this important area present in this book the state of the art in advanced studies of the design modeling control and applications of flexible manipulators

Network-based Distributed Planning Using Coevolutionary Algorithms Raj Subbu, Arthur C. Sanderson, 2004 In this book efficient and scalable coevolutionary algorithms for distributed network based decision making which utilize objective functions are developed in a networked environment where internode communications are a primary factor in system performance A theoretical foundation for this class of coevolutionary algorithms is introduced using techniques from stochastic process theory and mathematical analysis A case study in distributed network based decision making presents an implementation and detailed evaluation of the coevolutionary decision making framework that incorporates distributed evolutionary agents and mobile agents The methodology discussed in this book can have a fundamental impact on the principles and practice of engineering in the distributed network based environment that is emerging within and among corporate enterprise systems In addition the conceptual framework of the approach to distributed decision systems described may have much wider implications for network based systems and applications

Intelligent Task Planning Using Fuzzy Petri Nets Tiehua Cao, Arthur C. Sanderson, 1996 This book describes an approach to intelligent task planning in a robotic system Petri net and fuzzy logic are integrated and used to represent task sequence planning and error recovery During the generation and execution of task plans different kinds of uncertainties need to be handled to ensure the efficiency and reliability of the system Following a systematic modeling procedure a fuzzy Petri net is constructed based on geometric relations fuzzy variables and reasoning structures The resulting net can be used to analyze and control the system Many examples are discussed to illustrate the theory and the applications of fuzzy Petri nets

Intelligent Systems: Safety, Reliability and Maintainability Issues Okay Kaynak, Ger Honderd, Edward Grant, 2012-12-06 This book is a collection of some of the papers that were presented during a NATO Advanced Research Workshop ARW on Intelligent Systems Safety Reliability and Maintainability Issues that was held in Kusadasi Turkey during August 24 28 1992 Attendance at this workshop was mainly by invitation only drawing people internationally representing industry government and the academic community Many of the participants were internationally recognized leaders in the topic of the workshop The purpose of the ARW was to bring together a highly distinguished group of people with the express purpose of debating where the issues of safety reliability and maintainability place direct and tangible constraints on the development of intelligent systems As a consequence one of the major debating points in the ARW was the definition of intelligence intelligent behaviour and their relation to complex dynamic systems Two major conclusions evolved from the ARW are 1 A continued need exists to develop formal theoretical frameworks for the architecture of such systems together with a reflection on the concept of intelligence 2 There is a need to focus greater attention to the role that the human play in controlling intelligent systems The workshop began by considering the typical features of an intelligent system The complexity associated with multi resolutional architectures was then discussed leading to the identification of a necessity for the use of a combinatorial synthesis approach This was followed by a session on human interface issues **Advanced**

Robotics & Intelligent Machines J. O. Gray, Darwin G. Caldwell, 1996 Advanced robotics describes the use of sensor based robotic devices which exploit powerful computers to achieve the high levels of functionality that begin to mimic intelligent human behaviour The object of this book is to summarise developments in the base technologies survey recent applications and highlight new advanced concepts which will influence future progress **Who's Who in Finance and Business**
