Lost Fields:

Structure of Typical American Oil Fields American Association of Petroleum Geologists, 1929 Geology and Technology of the California Oil Fields Ralph Arnold, Valentín R. Garfias, 1914 ePro Brian Tiplady, 2016-05-13 Patient self reported data has become increasingly important in today's clinical trials. Trials in some disease indications rely upon patient recorded diary data as the primary endpoint to demonstrate drug efficacy including for example indications such as insomnia, migraine and pain. In addition, improvements in quality of life measured using patient questionnaires can now be included as claims on drug labelling. Traditionally, these data have been collected using paper questionnaires and diaries issued to subjects. Regulators and the industry have become increasingly aware of the limitations of recording patient reported outcomes data on paper, including data quality and integrity issues. As a result, there is a growing interest in collection of patient reported outcomes data using electronic means. ePRO Solutions include handheld PDAs, Interactive Voice Response (IVR) systems and other site based hardware such as touchscreen PCs. Recently, there has been much open debate with the regulators around the use of ePRO in clinical drug submissions. US and European agencies have approved new drugs that have included ePRO data in the submission dossier, but there are many questions around the adoption of the technology that concern the community. These include: How should instruments developed on paper be adapted for electronic use and what degree of validation should be done between paper and electronic forms? How can researchers ensure they are complying with regulatory requirements including the PRO guidance published by FDA in 2009 when using ePRO solutions? Can fewer patients be exposed in a clinical trial as a result of improved data quality obtained using electronic diaries? What type of solution should be used for certain patient populations and protocols and how can ePRO solutions be designed optimally to increase patient acceptability and compliance? Bill Byrom and Brian Tiplady's ePro addresses all these issues, reviews the new FDA guidance and provides a very contemporary view on this important subject.

Writing Apache Modules with Perl and C Lincoln Stein, Doug MacEachern, 1999 Apache is the most popular web server on the Internet because it is free, reliable and extensible. The availability of the source code and the modular design of Apache makes it possible to extend web server functionality through the Apache API. For the most part, however, the Apache API has only been available to C programmers and requires rebuilding the Apache server from source. `mod_perl`, the popular Apache module used primarily for enhanced CGI performance, changed all that by making the Apache API available to Perl programmers. With `mod_perl`, it becomes simple to develop Apache modules with Perl and install them without having to rebuild the web server. *Writing Apache Modules with Perl and C* shows how to extend web server capabilities regardless of whether the programming language is Perl or C. The book explains the design of `mod_perl` and the Apache API. It then demonstrates how to use them to perform tasks like the following: Rewriting CGI scripts as Apache modules to vastly improve performance. Server side filtering of HTML documents to embed special markup or code, much like SSI. Enhancing server log functionality. Converting file formats on the

fly Implementing dynamic navigation bars Incorporating database access into CGI scripts Customizing access control and authorization to block robots or to use an external database for passwords The authors are Lincoln Stein and Doug MacEachern Lincoln is the successful author of *How to Set Up and Maintain a World Wide web Site* and the developer of the widely used Perl CGI pm module Doug is a consultant and the creator of the innovative mod_perl Apache module *Mining and Engineering World*, 1907
