

Overview: Measures of Environmental Performance and Ecosystem Condition

PETER C. SCHULZE AND ROBERT A. FROSCH

"... everything is an indicator of something but nothing is an indicator of everything."

(Cairns et al., 1993, p. 6)

No metrics were necessary to recognize a problem when the Cuyahoga River caught fire in Cleveland. Likewise, any casual observer would realize that something is wrong with the Aral Sea, where commercial fishing vessels lie stranded in their ports dozens of kilometers inland. In both cases, shortsighted human behavior led to dire, readily detectable environmental consequences.

The problem with relying on such blatant evidence is that environmental deterioration becomes critical before a response is even contemplated, let alone implemented. Rather than wait for disasters to happen, one would prefer to avoid problems in the first place. This, however, requires the ability to predict the environmental consequences of human activities, avoid activities with unacceptable impacts, and document the environmental consequences of other activities. Any sophisticated attempt to predict and detect the environmental impact of human activities requires appropriate measurement methods.

Since the modern environmental movement picked up steam in the 1960s, we as a society have effectively addressed some of the most obvious or straightforward environmental effects of human activities. Gasoline sold in the United States no longer contains lead, hence, there is less lead in the air. One rarely sees a belching smokestack. The Cuyahoga River, much cleaner now, is not likely to catch fire again.

The human impacts on the environment that receive the most attention today

Measures Of Environmental Performance And Ecosystem Condition:

Measures of Environmental Performance and Ecosystem Condition National Academy of Engineering, 1999-06-19 When Cleveland's Cuyahoga River caught fire in 1969 no environmental measurements were necessary to know the seriousness of the problem. Incidents like the Cuyahoga fire raise an important question: Can catastrophes in the making be detected early enough to be prevented? For those in industry such disasters point to the need for measures that can improve the environmental performance of processes, products, business practices, and linked industrial systems. In *Measures of Environmental Performance and Ecosystem Condition* experts share their insights on environmental metrics. The volume explores the most productive relationship between measures of environmental performance and measures of ecosystem conditions. It reviews current approaches, evaluates structures for business decisionmaking, and includes a matrix for determining the environmental performance of industrial facilities. Case studies include: Development and application of a water quality rating scheme for streams and reservoirs in the Tennessee Valley. Three years of successful experience with waste metrics at 3M. The book covers the range of environmental performance and condition metrics from the use of material flow data to monitor environmental performance at the national level to the use of bioassays to measure the toxicity of industrial effluents. This book offers something for everyone: policymakers, executives, engineers, managers, and advocates with a stake in the measurement of environmental performance and ecological conditions.

Sustainable Metals Management Arnim von Gleich, Robert U. Ayres, Stefan Gößling-Reisemann, 2007-01-16 What's in a name What in particular is metals management all about I suspect that my colleagues assumed that I would have a good answer given that the endowed Sandoz Chair I occupied from 1992 until my retirement in 2000 was entitled Environment and Management and at INSEAD I created a Center for Management of Environmental Resources CMER Metals are a subset of resources et voila However in all honesty management as such was never my core competence to use another phrase popularized by business schools Here comes the shocking secret We used the word management in those titles because INSEAD is a business school where everything has to have an application to business For my colleagues at INSEAD management is what we supposedly teach Good management they we think distinguishes successful enterprises from unsuccessful ones For some of our graduates management is what they give professional advice to corporate clients about For the rest of our graduates it is the umbrella word that describes their choice of career The implication conveyed by our choice of words is that metals can be regarded as one category of environmental resources and that resources including environmental resources can be managed in somewhat the same way that a corporation can be managed It is not even too far fetched to suggest that long run sustainability might be a management problem
