Positive Definite Functions On Infinite Dimensional Convex Cones:

Positive Definite Functions on Infinite-Dimensional Convex Cones Helge Glöckner, 2003 A memoir that studies positive definite functions on convex subsets of finite or infinite dimensional vector spaces It studies representations of convex cones by positive operators on Hilbert spaces It also studies the interplay between positive definite functions and representations of convex cones

Classification and Probabilistic Representation of the Positive Solutions of a Semilinear Elliptic Equation Benoît Mselati, 2004 Concerned with the nonnegative solutions of $\Delta u = u^2$ in a bounded and smooth domain in $\mathbb{R}^d$ this title intends to prove that they are uniquely determined by their fine trace on the boundary as defined in DK98a answering a major open question of Dy02

Kähler Spaces, Nilpotent Orbits, and Singular Reduction Johannes Huebschmann, 2004 For a stratified symplectic space a suitable concept of stratified Kähler polarization encapsulates Kähler polarizations on the strata and the behaviour of the polarizations across the strata and leads to the notion of stratified Kähler space which establishes an intimate relationship between nilpotent orbits singular reduction invariant theory reductive dual pairs Jordan triple systems symmetric domains and pre homogeneous spaces The closure of a holomorphic nilpotent orbit or equivalently the closure of the stratum of the associated pre homogeneous space of parabolic type carries a positive normal Kähler structure In the world of singular Poisson geometry the closures of principal holomorphic nilpotent orbits positive definite hermitian JTS's and certain pre homogeneous spaces appear as different incarnations of the same structure The closure of the principal holomorphic nilpotent orbit arises from a semisimple holomorphic orbit by contraction Symplectic reduction carries a positive Kähler manifold to a positive normal Kähler space in

such a way that the sheaf of germs of polarized functions coincides with the ordinary sheaf of germs of holomorphic functions
 Symplectic reduction establishes a close relationship between singular reduced spaces and nilpotent orbits of the dual groups
 Projectivization of holomorphic nilpotent orbits yields exotic positive stratified Kahler structures on complex projective spaces and on certain complex projective varieties including complex projective quadrics
 The space of in general twisted representations of the fundamental group of a closed surface in a compact Lie group or equivalently a moduli space of central Yang Mills connections on a principal bundle over a surface inherits a positive normal stratified Kahler structure
 Physical examples are provided by certain reduced spaces arising from angular momentum zero

Shock-Wave Solutions of the Einstein Equations with Perfect Fluid Sources: Existence and Consistency by a Locally Inertial Glimm Scheme

Jeff Groah, Blake Temple, 2004 Demonstrates the consistency of the Einstein equations at the level of shock waves by proving the existence of shock wave solutions of the spherically symmetric Einstein equations for a perfect fluid starting from initial density and velocity profiles that are only locally of bounded total variation

v_1 -Periodic Homotopy Groups of $SO(n)$ Martin Bendersky, Donald M. Davis, 2004 Computes the 2 primary v_1 periodic homotopy groups of the special orthogonal groups $SO(n)$ the method is to calculate the Bendersky Thompson spectral sequence a K_* based unstable homotopy spectral sequence of operatorname Spin n

Exceptional Vector Bundles, Tilting Sheaves and Tilting Complexes for Weighted Projective Lines Hagen Meltzer, 2004 Deals with weighted projective lines a class of non commutative curves modelled by Geigle and Lenzing on a graded commutative sheaf theory They play an important role in representation theory of finite dimensional algebras the complexity of the classification of coherent sheaves largely depends on the genus of these curves

Locally Finite Root Systems Ottmar Loos, Erhard Neher, 2004 We develop the basic theory of root systems R in a real vector space X which are defined in analogy to the usual finite root systems except that finiteness is replaced by local finiteness the intersection of R with every finite dimensional subspace of X is finite The main topics are Weyl groups parabolic subsets and positive systems weights and gradings

Mutually Catalytic Super Branching Random Walks: Large Finite Systems and Renormalization Analysis J. T. Cox, Jeff Groah, Donald Andrew Dawson, Andreas Greven, 2004 Studies the evolution of the large finite spatial systems in size dependent time scales and compare them with the behavior of the infinite systems which amounts to establishing the so called finite system scheme This title introduces the concept of a continuum limit in the hierarchical mean field limit

A Random Tiling Model for Two Dimensional Electrostatics Mihai Ciucu, 2005 Studies the correlation of holes in random lozenge i e unit rhombus tilings of the triangular lattice This book analyzes the joint correlation of these triangular holes when their complement is tiled uniformly at random by lozenges

Local Zeta Functions Attached to the Minimal Spherical Series for a Class of Symmetric Spaces

Nicole Bopp, Hubert Rubenthaler, 2005 Intends to prove a functional equation for a local zeta function attached to the minimal spherical series for a class of real reductive symmetric spaces

The Second Duals of Beurling Algebras

Harold G. Dales, Anthony To-Ming Lau, 2005 Let A be a Banach algebra with second dual space A'' . We propose to study the space A'' as a Banach algebra. There are two Banach algebra products on A'' denoted by $\boxtimes$ and $\diamond$. The Banach algebra A'' is Arens regular if the two products $\boxtimes$ and $\diamond$ coincide on A'' .

S. Kechris, 2005 Contributes to the theory of Borel equivalence relations considered up to Borel reducibility and measures preserving group actions considered up to orbit equivalence. This title catalogs the actions of products of the free group and obtains additional rigidity theorems and relative ergodicity results in this context.

Well-Posedness for General 2×2 Systems of Conservation Laws

Fabio Ancona, Andrea Marson, 2004 Considers the Cauchy problem for a strictly hyperbolic 2×2 system of conservation laws in one space dimension $u_t + F(u) = 0$ where $F(u)$ is neither linearly degenerate nor genuinely nonlinear.

Entropy Bounds and Isoperimetry Serguei Germanovich Bobkov, B. Zegarlinski, 2005 In these memoirs Bobkov and Zegarlinski describe interesting developments in infinite dimensional analysis that moved it away from experimental science. Here they also describe Poincaré type inequalities, entropy and Orlicz spaces, L^p and Hardy type inequalities on the line, probability measures satisfying L^p inequalities on the real line, etc.

Kleinian Groups which Are Limits of Geometrically Finite Groups Ken'ichi Ōshika, 2005 Ahlfors conjectured in 1964 that the limit set of every finitely generated Kleinian group either has Lebesgue measure 0 or is the entire S^2 . This title intends to prove that this conjecture is true for purely loxodromic Kleinian groups which are algebraic limits of geometrically finite groups.
