

The "total cost" of textbooks purchased by each student for this semester is a quantitative variable. A sample result for the following variable is shown. To find the "average cost," simply add the three numbers and divide by 3: $(238.87 + 94.57 + 139.24)/3 = \157.56 .]

Note: Arithmetic operations, such as addition and averaging, are meaningful for data that result from a quantitative variable.

Each of these types of variables (qualitative and quantitative) can be further subdivided as illustrated in the following diagram.

Qualitative variables may be characterized as nominal or ordinal.

Nominal variable A qualitative variable that characterizes (or describes, or names) an element of a population. Not only are arithmetic operations not meaningful for data that result from a nominal variable, but an order cannot be assigned to the categories.
