dependence and abuse are urgently needed In the United States alone about 50 million people regularly smoke tobacco and another 5 million are addicted to other drugs In a given year millions of these individuals attempt with or without medical assistance to quit using drugs though relapse remains the norm Furthermore each year several million teenagers start smoking and nearly as many take illicit drugs for the first time Research is advancing on promising new means of treating drug addiction using immunotherapies and sustained release depot medications The aim of this research is to develop medications that can block or significantly attenuate the psychoactive effects of such drugs as cocaine nicotine heroin phencyclidine and methamphetamine for weeks or months at a time This represents a fundamentally new therapeutic approach that shows promise for treating drug addiction problems that were difficult to treat in the past Despite their potential benefits however several characteristics of these new methods pose distinct behavioral ethical legal and social challenges that require careful scrutiny Such issues can be considered unique aspects of safety and efficacy that are fundamentally related to the distinct nature and properties of these new types of medications **Alcohol Alert** ,2003-04

cultural underpinnings of addiction have led to rapid advances in the understanding of addiction as a disease. In fact, advances in basic science and the development of new pharmacological and behavioral therapies associated with them are appearing faster than can be assimilated not only by clinical researchers but practitioners and policy makers as well. Translation of science-based addictions knowledge into improved prevention, assessment, and treatment and communication of these changes to researchers and practitioners are significant challenges to the field. The general aim of *Translation of Addictions Science Into Practice* is to summarize current and potential linkages between advances in addiction science and innovations in clinical practice. Whilst this book is primarily focused on translation, it also encompasses some scientific advances that are relevant to dissemination, and the book is itself a tool for disseminating innovative thinking. The goal is to generate interest in application opportunities from both recent research and theoretical advances. Provides a much needed resource for translating current research into clinical practice. Focuses upon alcohol, tobacco, and substance abuse addictions. Addresses method of research and best dissemination techniques.
