Recent Trends In Data Type Specification:

Recent Trends in Data Type Specification Magne Haveraaen,Olaf Owe,Ole-Johan Dahl,1996-09-04 This book contains a strictly refereed selection of revised full papers chosen from the papers accepted for presentation during the 11th Workshop on Abstract Data Types held jointly with the 8th COMPASS Workshop in Oslo Norway in September 1995 The 25 research papers included were chosen from 57 pre selected workshop presentations also included are six invited contributions The volume reports the progress achieved in the area of algebraic specification since the predecessor meeting held in May 1994 **Recent Trends in Data Type Specification** ,1996 Algebraic Foundations of Systems Specification Egidio Astesiano,Hans-Jörg Kreowski,Bernd Krieg-Brückner,2012-12-06 The aim of software engineering is the provision and investigation of methods for the development of software systems of high quality with correctness as a key issue A system is called correct if it does what one wants if it meets the requirements To achieve and to guarantee correct systems the need of formal methods with rigorous semantics and the possibility of verification is widely accepted Algebraic specification is a software engineering approach of this perspective When Liskov and Zilles Guttag and the ADJ group with Goguen Thatch er Wagner and Wright introduced the basic ideas of algebraic specification in the mid seventies in the U S A and Canada they initiated a very successful and still flourishing new area In the late seventies algebraic specification became a major research topic also in many European countries Originally the algebraic framework was intended for the mathematical foundation of ab stract data types and the formal development of first order applicative pro grams Meanwhile the range of applications has been extended to the precise specification of complete software systems the uniform definition of syntax and semantics of programming languages and to the stepwise development of correct systems from the requirement definitions to the running programs The activities in the last 25 years have led to an abundance of concepts methods approaches theories languages and tools which are mathemati cally founded in universal algebra category theory and logic **Semantic Integration of Heterogeneous Software Specifications** Martin Große-Rhode,2013-03-09 In a model based development of software systems different views on a system are elaborated using appropriate modeling languages and techniques Because of the unavoidable heterogeneity of the viewpoint models a semantic integration is required to establish the correspondences of the models and allow checking of their relative consistency The integration approach introduced in this book is based on a common semantic domain of abstract systems their composition and development Its applicability is shown through semantic interpretations and compositional comparisons of different specification approaches These range from formal specification techniques like process calculi Petri nets and rule based formalisms to semiformal software modeling languages like those in the UML family *Foundations of Algebraic Specification and Formal Software Development* Donald Sannella,Andrzej Tarlecki,2012-01-05 This book provides foundations for software specification and formal software development from the perspective of work on algebraic specification concentrating on developing basic concepts and studying their fundamental

properties These foundations are built on a solid mathematical basis using elements of universal algebra category theory and logic and this mathematical toolbox provides a convenient language for precisely formulating the concepts involved in software specification and development Once formally defined these notions become subject to mathematical investigation and this interplay between mathematics and software engineering yields results that are mathematically interesting conceptually revealing and practically useful The theory presented by the authors has its origins in work on algebraic specifications that started in the early 1970s and their treatment is comprehensive This book contains five kinds of material the requisite mathematical foundations traditional algebraic specifications elements of the theory of institutions formal specification and development and proof methods While the book is self contained mathematical maturity and familiarity with the problems of software engineering is required and in the examples that directly relate to programming the authors assume acquaintance with the concepts of functional programming The book will be of value to researchers and advanced graduate students in the areas of programming and theoretical computer science   **STACS 92** Alain Finkel,Matthias Jantzen,1992-02-04 This volume gives the proceedings of the ninth Symposium on Theoretical Aspects of Computer Science STACS This annual symposium is held alternately in France and Germany and is organized jointly by the Special Interest Group for Fundamental Computer Science of the Association Francaise des Sciences et Technologies de l Information et des Syst mes AFCET and the Special Interest Group for Theoretical Computer Science of the Gesellschaft f r Informatik GI The volume includes three invited lectures and sections on parallel algorithms logic and semantics computational geometry automata and languages structural complexity computational geometry and learning theory complexity and communication distributed systems complexity algorithms cryptography VLSI words and rewriting and systems   *Formal Methods for Open Object-based Distributed Systems* Howard Bowman,John Derrick,2016-01-09 This book presents the leading edge in several related fields specifically object orientated programming open distributed systems and formal methods for object oriented systems With increased support within industry regarding these areas this book captures the most up to date information on the subject Many topics are discussed including the following important areas object oriented design and programming formal specification of distributed systems open distributed platforms types interfaces and behaviour formalisation of object oriented methods   *Algebraic System Specification and Development* Michel Bidoit,1991-06-26 Methods for the algebraic specification of abstract data types were proposed in the early 1970s in the USA and Canada and became a major research issue in Europe shortly afterwards Since then the algebraic approach has come to play a central role in research on formal specification and development as its range of applications was extended to the specification of complete software systems to the formal description of the program development process and to the uniform definition of syntax and semantics of programming languages Today this approach extends beyond just software to the development of integrated hardware and software systems These flourishing activities in the area of algebraic specifications have led to an abundance of approaches

theories and concepts which have universal algebra category theory and logic as a common mathematical basis This volume is an annotated bibliography which provides an up to date overview of past and present work on algebraic specification No attempt is made to provide a coherent introduction to the topic for beginners the intention is rather to provide a guide to the current literature for researchers in algebraic specification and neighboring fields Some indications of how the different approaches are related are included together with some ideas concerning possible future directions **Algebraic Methodology and Software Technology** Michael Johnson,1997-12 This book constitutes the refereed proceedings of the 6th International Conference on Algebraic Methodology and Software Engineering AMAST 97 held in Sydney Australia in December 1997 The volume presents 48 revised full papers selected from an unusually high number of submissions One of the outstanding features of AMAST is its mix of serious mathematical development of formal methods in software engineering with practical concerns tools case studies and industrial development The volume addresses all current aspects of formal methods in software engineering and programming methodology with a certain emphasis on algebraic and logical foundations **Program Development by Specification and Transformation** Berthold Hoffmann,Bernd Krieg-Brückner,1993-08-30 This volume gives a coherent presentation of the outcome of the project PROSPECTRA PROgram development by SPECification and TRAnsformation that aims to provide a rigorous methodology for developing correct software and a comprehensive support system The results are substantial a theoretically well founded methodology covering the whole development cycle a very high level specification and transformation language family allowing meta program development and formalization of the development process itself and a prototype development system supporting structure editing incremental static semantic checking interactive context sensitivetransformation and verification development of transformation meta programs version management and so on with an initial libraryof specifications and a sizeable collection of implemented transformations The intended audience for this documentation is the academic community working in this and related areas and those members of the industrial community interested in the use of formal methods *Algebraic and Logic Programming* Giorgio Levi,Mario Rodriguez-Artalejo,1994-08-24 This volume constitutes the proceedings of the Fourth International Conference on Algebraic and Logic Programming ALP 94 held in Madrid Spain in September 1994 Like the predecessor conferences in this series ALP 94 succeeded in strengthening the cross fertilization between algebraic techniques and logic programming Besides abstracts of three invited talks the volume contains 17 full revised papers selected from 41 submissions the papers are organized into sections on theorem proving narrowing logic programming term rewriting and higher order programming **Multi-Agent Systems and Applications** Michael Luck,2001-06-20 This book presents selected tutorial lectures given at the summer school on Multi Agent Systems and Their Applications held in Prague Czech Republic in July 2001 under the sponsorship of ECCAI and Agent Link The 20 lectures by leading researchers in the field presented in the book give a competent state of the art account of research and development in the field of multi agent

systems and advanced applications The book offers parts on foundations of MAS social behaviour meta reasoning and learning and applications   Formal Description of Programming Concepts Erich Neuhold,Manfred Paul,1991-10-04 In software engineering there is a growing need for formalization as a basis for developing powerful computer assisted methods This volume contains seven extensive lectures prepared for a series of IFIP seminars on the Formal Description of Programming Concepts The authors are experts in their fields and have contributed substantially to the state of the art in numerous publications The lectures cover a wide range in the theoretical foundations of programming and give an up to date account of the semantic models and the related tools which have been developed in order to allow a rigorous discussion of the problems met in the construction of correct programs In particular methods for the specification and transformation of programs are considered in detail One lecture is devoted to the formalization of concurrency and distributed systems and reflects their great importance in programming Further topics are the verification of programs and the use of sophisticated type systems in programming This compendium on the theoretical foundations of programming is also suitable as a textbook for special seminars on different aspects of this broad subject   Category Theory and Computer Science Eugenio Moggi,Giuseppe Rosolini,1997-08-20 This book constitutes the refereed proceedings of the 7th International Conference on Category Theory and Computer Science CTCS 97 held in Santa Margheria Ligure Italy in September 1997 Category theory attracts interest in the theoretical computer science community because of its ability to establish connections between different areas in computer science and mathematics and to provide a few generic principles for organizing mathematical theories This book presents a selection of 15 revised full papers together with three invited contributions The topics addressed include reasoning principles for types rewriting program semantics and structuring of logical systems   **Ewa Orłowska on Relational Methods in Logic and Computer Science** Joanna Golińska-Pilarek,Michał Zawidzki,2018-12-08 This book is a tribute to Professor Ewa Or owska a Polish logician who was celebrating the 60th year of her scientific career in 2017 It offers a collection of contributed papers by different authors and covers the most important areas of her research Prof Or owska made significant contributions to many fields of logic such as proof theory algebraic methods in logic and knowledge representation and her work has been published in 3 monographs and over 100 articles in internationally acclaimed journals and conference proceedings The book also includes Prof Or owska s autobiography bibliography and a trialogue between her and the editors of the volume as well as contributors biographical notes and is suitable for scholars and students of logic who are interested in understanding more about Prof Or owska s work   Categories for Software Engineering Jose Luiz Fiadeiro,2005-08-09 Why Another Book on Category Theory In the past ten years several books have been published on category t ory either by computer scientists or having computer scientists as a target audience e g 6 12 22 89 105 to which a precious collection of little gems 90 and the chapter cum book 91 should be added Isn t the working computer scientist spoilt with choice Although each of the above mentioned books presents an approach of its own there is

one aspect in common in their view of computer science the analogy between arrows morphisms and classes of computations This type theoretic or functional approach corresponds to a view of c puter science as a science of computation i e a discipline concerned with the study of computational phenomena where the focus is on the nature and organisation of computations However there is another view of computer science where the focus is instead on the development of computer programs or systems This is the approach that supports for instance software engineering From this point of view arrows do not capture computational phenomena or abstractions thereof but instead relationships between programs or abstractions of programs that arise in the development of computer systems for instance refinement of higher level specifications into executable programs 100 104 and superposition of new features over existing systems 72   Object Orientation with Parallelism and Persistence Burkhard Freitag,Cliff B. Jones,Christian Lengauer,Hans-Jörg Schek,2012-12-06 Both object orientation and parallelism are modern programming paradigms which have gained much popularity in the last 10 15 years Object orientation raises hopes for increased productivity of software generation and maintenance methods Parallelism can serve to structure a problem but also promises faster program execution The two areas of computing science in which these paradigms play the most prominent role are programming languages and databases In programming languages one can take an academic approach with a primary focus on the generality of the semantics of the language constructs which support the respective paradigm In databases one is willing to restrict the power of the constructs in the interest of increased efficiency Inter and intra object parallelism have received an increasing amount of attention in the last few years by researchers in the area of object oriented programming At first glance an object is very similar to a process which offers services to other processes and demands services from them It has however transpired that object oriented concepts cause problems when combined with parallelism In programming languages the introduction of parallelism and the synchronization constraints it brings with it can get in the way of code reusability In databases the combination of object orientation and parallelism requires for example a generalization of the transaction model new approaches to the specification of information systems an implementation model of object communication and the design of an overall system architecture There has been insufficient communication between researchers in programming languages and in databases on these issues Object Orientation with Parallelism and Persistence grew out of a Dagstuhl Seminar of the same title in April 1995 whose goal it was to put the new research area object orientation with parallelism on an interdisciplinary basis Object Orientation with Parallelism and Persistence will be of interest to researchers and professionals working in software engineering programming languages and database systems   **Algebraic Methodology and Software Technology** Armando M. Haeberer,2003-05-20 AMAST s goal is to advance awareness of algebraic and logical methodology as part of the fundamental basis of software technology Ten years and seven conferences after the start of the AMAST movement I believe we are attaining this The movement has propagated throughout the world assembling many enthusiastic specialists who have participated not only in the conferences

which are now annual but also in the innumerable other activities that AMAST promotes and supports We are now facing the Seventh International Conference on Algebraic Methodology and Software Technology AMAST 98 The previous meetings were held in Iowa City USA 1989 and 1991 in Enschede The Netherlands 1993 in Montreal Canada 1995 in Munich Germany 1996 and in Sydney Australia 1997 This time it is Brazil s turn in a very special part of this colorful country Amazonia Thus if we have done more it is by standing on the shoulders of giants The effort started by Teodor Rus Arthur Fleck and William A Kirk at AMAST 89 was consolidated in AMAST 91 by Teodor Rus Maurice Nivat Charles Rattray and Giuseppe Scollo Then came modular construction of the building wonderfully carried out by Giuseppe Scollo Vangalur Alagar Martin Wirsing and Michael Johnson as Program Chairs of the AMAST conferences held between 1993 and 1997 *Formal Methods and Software Engineering* Chris George,Huaikou Miao,2003-06-30 This book constitutes the refereed proceedings of the 4th International Conference on Formal Engineering methods ICFEM 2002 held in Shanghai China in October 2002 The 43 revised full papers and 16 revised short papers presented together with 5 invited contributions were carefully reviewed and selected from a total of 108 submissions The papers are organized in topical sections on component engineering and software architecture method integration specification techniques and languages tools and environments refinement applications validation and verification UML and semantics **Handbook of Logic in Computer Science: Volume 5. Algebraic and Logical Structures** S. Abramsky,Dov M. Gabbay,T. S. E. Maibaum,2001-01-25 This handbook volume covers fundamental topics of semantics in logic and computation The chapters some monographic in length were written following years of co ordination and follow a thematic point of view The volume brings the reader up to front line research and is indispensable to any serious worker in the areas
