Recent Progress In Hormone Research Vol 5:

Recent Progress in Hormone Research Roy O. Greep, 2013-10-22 *Recent Progress in Hormone Research* Volume 32 covers the proceedings of the 1975 Laurentian Hormone Conference. The book discusses genetic approaches to steroid hormone action, the cytochemical bioassay of hormones and crystal structure of steroids. The text also describes the gonadotropin releasing hormone and thyrotropin releasing hormone, the ontogenesis of pituitary hormones and hypothalamic factors in the human fetus and the etiologies of sexual maturation. The epidemiologic studies of diabetes in the Pima Indians and the adrenal cortex and essential hypertension are also considered. The book further tackles the testicular control of follicle stimulating hormone secretion and nuclear receptors and the initiation of thyroid hormone action. The text then encompasses the receptor function and ion transport in turkey erythrocytes, the regulation of adenylate cyclase coupled beta adrenergic receptors and the control of cyclic AMP metabolism in parental and hybrid somatic cells. The molecular mechanisms of cyclic AMP action are also looked into. Endocrinologists, physiologists, molecular biologists and biochemists will find the book invaluable.

Recent Progress in Hormone Research E. B. Astwood, 2013-10-22 *Recent Progress in Hormone Research* Volume 26 covers the proceedings of the 27th annual meeting of the Laurentian Hormone Conference held at Mont Tremblant, Quebec, Canada, on August 24-29, 1969. The book presents papers on the pituitary and gonadal hormones in women during spontaneous and induced ovulatory cycles, the mechanisms regulating the menstrual cycle in women, some physical and hydrodynamic properties of human FSH and LH and the biological significance of the prostaglandins. The text also includes papers on thyroid peroxidase and thyroxine biosynthesis, the significance of circulating triiodothyronine, the multiple hormone interactions in the development of mammary gland in vitro and the intranuclear metabolism of testosterone in the accessory organs of reproduction. Papers on the aspects of androgen dependent events as studied by antiandrogens, the hormonal control of hepatic gluconeogenesis and the control of fat cell development and lipid content are also encompassed. The book further encompasses papers on the properties of thymosin, the study of spermatogenesis and steroid metabolism in cultures of mammalian testes and the role of ACTH on the metabolism of adrenal cell cultures.

Recent Progress in Hormone Research C. Wayne Bardin, 2014-05-10 *Recent Progress in Hormone Research* Volume 48 provides information pertinent to endocrine research dealing with all aspects of biological organization. This book covers a variety of topics including differentiation of the embryo, development and growth at puberty, maintenance of adult well being and aging. Organized into 29 chapters, this volume begins with an overview of the role of oncogenes in fetal development. This text then compares the molecular descriptions of the genes for growth hormone and prolactin receptors to receptors for a variety of other hormones, peptide and growth factors. Other chapters consider the three dimensional structure of the growth hormone receptor. This book discusses as well the conventional and nonconventional uses of human growth hormone with emphasis on the wide availability of protein that is possible only through molecular biology. The final

chapter deals with the effect of hormones on primate behavior This book is a valuable resource for geneticists and biologists

Recent Progress in Hormone Research - Volume 50 C. Wayne Bardin, 2013-10-22 Recent Progress in Hormone Research Volume 50 Proceedings of the 1993 Laurentian Hormone Conference focuses on the advancements of processes methodologies techniques and approaches involved in hormone research The selection first offers information on the molecular design of the NMDA receptor channel synthesis and signaling of growth hormone releasing hormone and signaling mechanisms during the response of pituitary gonadotropes to GnRH The discussions focus on calcium economy of gonadotropes role of oscillations structure and expression of the GHRH gene transgenic animal models for GHRH action and functional determinants in NMDA receptors The text then elaborates on signaling mechanisms during the response of pituitary gonadotropes to GnRH molecular genetic analysis of cAMP and glucocorticoid signaling in development and activins and the receptor serine kinase superfamily The publication takes a look at MAP kinase cascade expression and signal transduction pathways of gonadotropin releasing hormone receptors ovarian cell differentiation and the role of oxytocin and its receptor in parturition The book also examines the role of prolactin in developmental differentiation of hypophysiotropic tuberoinfundibular dopaminergic neurons and calcitonin gene expression in rat uterus during pregnancy The selection is a valuable source of data for researchers interested in hormone research Neuroendocrinology Transmembrane signaling Reproduction Steroids and the steroid receptor family Hypertension

Recent Progress in Hormone Research - Volume 49 C. Wayne Bardin, 2013-10-22 Among the topics covered in Volume 49 are neurotransmitter transporters circadian rhythms transgenic model for studying isles development protein phosphatases the androgen receptor molecular genetics of steroid 5 α reductases and benign and malignant prostatic neoplasms

Recent Advances in Polyphenol Research, Volume 5 Kumi Yoshida, Véronique Cheynier, Stéphane Quideau, 2017-02-06 Plant polyphenols are secondary metabolites that constitute one of the most common and widespread groups of natural products They express a large and diverse panel of biological activities including beneficial effects on both plants and humans Many polyphenols from their structurally simplest representatives to their oligo polymeric versions also referred to as vegetable tannins are notably known as phytoestrogens plant pigments potent antioxidants and protein interacting agents Sponsored by the scholarly society Groupe Polyphenols this publication which is the fifth volume in this highly regarded Recent Advances in Polyphenol Research series is edited by Kumi Yoshida Véronique Cheynier and Stéphane Quideau They have once again like their predecessors put together an impressive collection of cutting edge chapters written by expert scientists internationally respected in their respective field of polyphenol sciences This Volume 5 highlights some of the latest information and opinion on the following major research topics about polyphenols Chemistry physicochemistry materials science Biosynthesis genetic metabolic engineering Plant ecosystem lignocellulosic biomass Food nutrition health Natural medicine Kambo Tannins their functions Chemists biochemists plant scientists pharmacognosists and pharmacologists biologists ecologists food scientists and nutritionists will

all find this book an invaluable resource Libraries in all universities and research institutions where these disciplines are studied and taught should have copies on their bookshelves Recent Progress in Hormone Research James H.

Clark,2013-10-22 Recent Progress in Hormone Research Volume 46 provides a superior summary of the developments in the field of hormone research The book discusses the molecular basis of androgen insensitivity the tissue specific expression of the growth hormone gene and its control by growth hormone factor 1 and the molecular characterization of mammalian tachykinin receptors and a possible epithelial potassium channel The text also describes the properties of the guanylate cyclase receptor family insulin like growth factor binding proteins and growth hormone receptor and binding protein Mutations in the insulin receptor gene in genetic forms of insulin resistance the characteristics of the cAMP response unit and the role and secretion of inhibin in the rat are also considered The book further tackles the structure of the lutropin choriogonadotropin receptor and the gene for multiple endocrine neoplasia type 2a Endocrinologists physiologists and biochemists will find the text invaluable *Behavior, Health, and Environmental Stress* Sheldon Cohen,Gary W.

Evans,Daniel Stokols,David S. Krantz,2013-06-29 Eight years ago four psychologists with varying backgrounds but a common interest in the impact of environmental stress on behavior and health met to plan a study of the effects of aircraft noise on children The impetus for the study was an article in the Los Angeles Times about architectural interventions that were planned for several noise impacted schools under the air corridor of Los Angeles International Airport These interventions created an opportunity to study the same children during noise exposure and then later after the exposure had been attenuated The study was designed to test the generality of several noise effects that had been well established in laboratory experimental studies It focused on three areas the relationship between noise and personal control noise and attention and noise and cardiovascular response Two years later a second study designed to replicate and extend findings from the first was conducted **Cumulated Index Medicus** ,1989 Research Grants Index National Institutes of Health (U.S.).
