Performance Algorithms and Software for Nonlinear Optimization Gianni Pillo,Almerico Murli,2013-12-01 This volume contains the edited texts of the lectures presented at the Workshop on High Performance Algorithms and Software for Nonlinear Optimization held in Erice Sicily at the G Stampacchia School of Mathematics of the E Majorana Centre for Scientific Culture June 30 July 8 2001 In the first year of the new century the aim of the Workshop was to assess the past and to discuss the future of Nonlinear Optimization and to highlight recent achieve ments and promising research trends in this field An emphasis was requested on algorithmic and high performance software developments and on new computational experiences as well as on theoretical advances We believe that such goal was basically achieved The Workshop was attended by 71 people from 22 countries Although not all topics were covered the presentations gave indeed a wide overview of the field from different and complementary stand points Besides the lectures several formal and informal discussions took place We wish to express our appreciation for the active contribution of all the participants in the meeting The 18 papers included in this volume represent a significant selection of the most recent developments in nonlinear programming theory and practice They show that there is plenty of exciting ideas implementation issues and new applications which produce a very fast evolution in the field Innovations in Neural Information Paradigms and Applications Monica Bianchini,Marco Maggini,Franco Scarselli,2009-10-13 Tremendous advances in all disciplines including engineering science health care business avionics management and so on can also be attributed to the development of artificial intelligence paradigms In fact researchers are always interested in desi ing machines which can mimic the human behaviour in a limited way Therefore the

study of neural information processing paradigms have generated great interest among researchers in that machine learning borrowing features from human intelligence and applying them as algorithms in a computer friendly way involves not only Mathematics and Computer Science but also Biology Psychology Cognition and Philosophy among many other disciplines Generally speaking computers are fundamentally well suited for performing automatic computations based on fixed programmed rules i.e. in facing efficiently and reliably monotonous tasks often extremely time consuming from a human point of view Nevertheless unlike humans computers have troubles in understanding specific situations and adapting to new working environments Artificial intelligence and in particular machine learning techniques aim at improving computers behaviour in tackling such complex tasks On the other hand humans have an interesting approach to problem solving based on abstract thought high level deliberative reasoning and pattern recognition Artificial intelligence can help us understanding this process by recreating it then potentially enabling us to enhance it beyond our current capabilities
