Regulatory Mechanisms in Gastrointestinal Function (1995) Timothy S. Gaginella, 2017-11-22 *Regulatory Mechanisms in Gastrointestinal Function* includes a collection of contemporary topics in gastrointestinal research The control of gastroduodenal electrolyte transport and the influence of drugs on bicarbonate secretion are reviewed in detail The importance of the interactions between calcium and cyclic AMP in intestinal secretion is emphasized in a comprehensive chapter that systematically addresses each link in the mechanisms that regulate chloride secretion Other important topics included in the book are neural reflex modulation of intestinal epithelial transport the influence of the microcirculation on intestinal secretion and nitric oxide as a mediator of physiologic and pathophysiologic secretion The expertise of the authors has resulted in a breadth of important contemporary topics covered in depth

system Recently multi omics analysis strategies raised much concern about the proximal and distal cross talks between immunocytes and tissue specific cell types Methods for the diagnosis treatment and prognosis of digestive diseases related to immunity such as stem cell therapies small molecule chemical drugs biologics and phytochemicals have been successively developed and applied However the specific functions and related mechanisms of immune cells such as T cells B cells macrophages and other immune cells in digestive diseases still need further exploration Thus investigating the potential and promising immunomodulatory targets would help us uncover the initiation and development of molecular events of immune disorders in digestive system diseases which in turn would promote their prevention and treatment The goal of this Research Topic is to provide a forum to advance research on the comprehensive understanding of immune regulatory mechanisms and the role of abnormal mechanisms in the occurrence and development of digestive diseases as well as to explore innovative immune oriented drugs or treatment interventions in the attempt to achieve a beneficial impact on the diagnosis prevention therapy and prognosis of digestive diseases Bullet points are as below 1 The specific functions and clinical significance of immune cells e g T cells B cells macrophages and other immune cells etc in digestive diseases 2 The mechanism of immune cells participate in inflammatory reactions and tissue damage in digestive diseases 3 The mechanism of regulators affecting the inflammatory response of the digestive system e g nuclear receptor membrane receptor pathway etc 4 The role of small molecules in digestive diseases e g cytokines chemical factors anti inflammatory agents immune regulatory molecules etc 5 Development of novel anti inflammatory and immunomodulatory drugs for digestive diseases Bibliometric studies are outside of the scope of this section and may be rejected or redirected to other journals sections as appropriate Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease such as inflammatory disease are not in scope unless they have a strong focus on the immune system

Wood,2006-05-10 FROM THE PREFACE The original purpose of the First Edition of Physiology of the Gastrointestinal Tractto collect in one set of volumes the most current and comprehensive knowledge in our fieldwas also the driving force for the Fourth Edition The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation signaling networks in development apoptosis and mechanisms in malignancies Most of the chapters in this section were edited by Juanita L Merchant Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing

not only the movement of the various parts of the digestive tract but also cell physiology neural regulation stress and the regulation of food intake Almost all of the chapters were recruited and edited by Jackie D Wood The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E Barrett The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion The last section on Digestion and Absorption contains new chapters on the intestinal barrier protein sorting and ion channels along with those focusing on the uptake of specific nutrients These chapters were recruited and edited by Hamid M Said and Fayez K Ghishan Collected in one set the most current and comprehensive coverage of gastrointestinal physiology Information presented in a style that is both readable and understandable Valuable to the specialized researcher the clinical gastroenterologist the teacher and the student Features an entirely new section on Immunology and Inflammation Each section edited by the preeminent scientist in the field *Research Grants Index* National Institutes of Health (U.S.). Sanderson, W. Allan Walker, 2000 The authors chronicle the development of the gastrointestinal system beginning with the embryology of the gastrointestinal tract through development of cells to hormones and enzymes Each section provides detailed explanation of that stage of development so residents and clinicians can better understand the interrelationships of each structure Special attention is given to the latest cellular information and gene promoters in the regulation of intestinal development Coverage of defects due to trauma and infections is also included **Inflammatory Immune Disease: Molecular Mechanisms, Translational Approaches and Therapeutics** Tao Xu, Jian Gao, Sung Hwan Ki, Emanuela Ricciotti, 2022-07-05 [Psychophysiology of the Gastrointestinal Tract](#) Rupert Holz, 2012-12-06 Over a quarter century ago Flanders Dunbar in her 1954 compendium on Emotion and Bodily Changes surveyed over 5 000 references on psychosomatic interrelationships including a literature on psychic factors in gastrointestinal disorders dating back to 1845 The title of the present volume suggests a line of descent from these early initiatives but important changes are in the making Indeed the form and substance of long overdue reformulations are clearly reflected in

the scholarly contributions which enhance this report of the 1980 Munich symposium proceedings Traditional psychosomatic approaches to understanding the gastrointestinal system and its functional disorders have been based in large part on two virtually unchallenged assumptions In the first instance unobserved indeed unobservable psychological processes have been considered causally related to disease onset and or to fluctuations in the course of the disease And secondly it has been assumed that psychotherapeutic interventions for disease management should be designed to alter these hypothesized psychic antecedents More recently however a new paradigm for analyzing the relationships involving disordered physiological functions and behavioral interactions has been developed within the framework of what has been termed behavioral medicine The conceptual boundaries of this relatively new approach to behavioral physiology have not yet been firmly established but the major differences between the new behavioral model and the traditional psychosomatic model are brought into sharp relief by the experimental and clinical contributions to the present volume
