Regulatory Models For The Online World:

Regulatory Models for the Online World Rolf Weber, 2002-10-03 Global networks have become a major political economic and legal topic in discussions among the participants of the global community Around the world governments legal scholars and practitioners are in the process of developing theories in respect of the regulation of the online world These attempts are usually based on a given national legal culture this approach however underestimates the importance of an umbrella concept The purpose of this study accordingly consists in the comparative discussion of basic regulatory models traditional government regulation international agreements self regulation code based regulation and in the evaluation of their merits related to different topics that play a role in the online world market entry access infrastructure stability intellectual property privacy bad content etc An easy solution is obviously not possible however a detailed examination on a comparative legal basis can give some insights for future regulatory initiatives

Weber, 2002-01-01 Internet Governance Roy Balleste, 2015-03-06 Internet Governance Origins Current Issues and Future Possibilities deals with Internet governance and includes computer history Internet beginnings institutions and stakeholders proposed models of governance and human rights The concept of Internet governance covers an exceptionally complex and rapidly changing field of norms and rules Its origins and conflicts engage many disciplines and give rise to technical standards with contributions from a wide range of stakeholders At the same time the Internet has increasingly become the dominant reality for all the information processing industries The ultimate goal of the book is to establish a foundation for identifying a new model of governance for the Internet In doing so the book honors the efforts of previous scholars who have considered and proposed other models for the governance of the Internet Among its aims the book is intended as an introduction for the novice to the subject of internet governance The first two chapters offer a historical foundation of the institutions and the debate The next two chapters discuss the evolution of that debate over the last twenty years The final two discuss the present and future ramifications of the debate and include the author's attempts to sketch a practical plan for a new concept of Internet governance This book provides an introductory multidisciplinary account of the forces at work in the evolving concept of internet governance for scholars in the information studies fields including computer information and library science It should also be useful for scholars in the fields of international law international relations diplomacy studies and political science

Researching Internet Governance Laura Denardis, Derrick Cogburn, Nanette S. Levinson, Francesca Musiani, 2020-09-08 Scholars from a range of disciplines discuss research methods theories and conceptual approaches in the study of internet governance The design and governance of the internet has become one of the most pressing geopolitical issues of our era The stability of the economy democracy and the public sphere are wholly dependent on the stability and security of the internet Revelations about election hacking facial recognition technology and government surveillance have gotten the public's attention and made clear the need for scholarly research

that examines internet governance both empirically and conceptually In this volume scholars from a range of disciplines consider research methods theories and conceptual approaches in the study of internet governance

Multi-stakeholder Governance and the Internet Governance Forum Jeremy Malcolm, 2008 Multi stakeholder governance is a fresh approach to the development of transnational public policy bringing together governments the private sector and civil society in partnership The movement towards this new governance paradigm has been strongest in areas of public policy involving global networks of stakeholders too intricate to be represented by governments alone Nowhere is this better illustrated than on the Internet where it is an inherent characteristic of the network that laws and the behaviour to which those laws are directed will cross national borders resulting not only in conflicts between national regimes but also running up against the technical and social architecture of the Internet itself In this book Jeremy Malcolm examines the new model of multi stakeholder governance for the Internet regime that the Internet Governance Forum IGF represents He builds a compelling case for the reform of the IGF to enable it to fulfil its mandate as an institution for multi stakeholder Internet governance

Provided by publisher Deconstructing Digital Capitalism and the Smart Society Mel van Elteren, 2025-01-01 Today s critics of big online platforms tend to consider privacy breaches monopolistic practices and the deployment of surveillance technologies as the main problems Internet reformers suggest the answers to these issues reside in more and better regulations While the questions of privacy data and size are indeed important they are secondary however to a deeper set of concerns about platform ownership and control and who benefits from the current status quo This book examines these issues and offers an historical overview and in depth analysis of digital capitalism and its prevailing practices as it has become increasingly intertwined with various forms of online surveillance behavior modification and the delegation of managerial functions to algorithmic and automated systems in platform economies The approach taken extends to the wider array of data driven internet connected and automated systems that involve digital devices and technologies centered on three smart spaces the smart self the smart home and the smart city Antitrust and other regulatory measures by the European Union and the United States that are aimed at restraining platform capitalism are also discussed The focus in particular is on recent developments regarding artificial intelligence and their potentially harmful implications This is followed by a critical look at proposals for more far reaching institutional reforms revolving around the creation of forms of platform socialism that build partly on existing practices of platform cooperativism The book concludes with a diagnosis of the global situation among the competing digital empires the United States the European Union and China and considers whether or not under the present conditions any form of democratic platform socialism could materialize on a wider scale in the near future

Internet of Things Rolf H. Weber, Romana Weber, 2010-06-10 The Internet of Things as an emerging global Internet based information architecture facilitating the exchange of goods and services is gradually developing While the technology of the Internet of Things is still being discussed and created the legal framework should be established before

the Internet of Things is fully operable in order to allow for an effective introduction of the new information architecture. If a self-regulatory approach is to be adopted to provide a legal framework for the Internet of Things and this seems preferable, rulemakers can draw on experiences from the current regime of Internet governance. In the near future, mainly businesses will operate in the Internet of Things. Civil society is only expected to make use of the Internet of Things as it now does of the Internet at a later stage, e.g. for healthcare. The Internet of Things will have an impact in various areas. The regulatory framework must provide for provisions ensuring the security of the structure as well as the privacy of its users. Furthermore, legal barriers that may stand in the way of the coming into operation of the Internet of Things will have to be considered. However, the Internet of Things will also have positive effects in different fields such as the inclusion of developing countries in global trade, the use of search engines to the benefit of civil society, combating product counterfeiting, tackling environmental concerns, improving health conditions, securing food supply and monitoring compliance with labor standards.

Realizing a New Global Cyberspace Framework Rolf H. Weber, 2014-09-23 In many respects cyberspace has created a new world. The online phenomena encompass social, cultural, economic and legal facets. Exceeding the present Internet Governance concept, the book analyses the normative foundations and guiding principles of a global cyberspace regime that includes the exchange of people, businesses, governments and other entities. Based on this assessment and philosophical theories, the book attempts to outline a model for a general legal framework enshrining key principles of civil society such as human rights, ethics. The proposed global framework, not in the form of a multilateral treaty but a morally convincing declaration, could then be complemented by additional polycentric regulations with binding effect developed on the basis of multistakeholder participation in a multi-layer concept.

Classification of Services in the Digital Economy Rolf H. Weber, Mira Burri, 2012-09-20 The classification of services in the digital economy proves critical for doing business but it appears to be a particularly complex regulatory matter that is based upon a manifold set of issues. In the context of the General Agreement on Trade in Services (GATS) when the services classification scheme was drafted in the early 1990s, convergence processes had not unfolded yet and the internet was still in its infancy and not a reality in daily life. Therefore, policy makers are now struggling with the problem of regulating trade in electronic services and are in search of a future-oriented solution for classifying them in multilateral and preferential trade agreements. In late fall 2011, the authors of this study were mandated by the European Union Delegation to Vietnam in the context of the Multilateral Trade Assistance Project 3 (MUTRAP 3) to work out a report clarifying the classification of services in the information digital economy and to assess the impact of any decision regarding the classifications on the domestic and external relations policy of Vietnam as well as to discuss the relevant issues with local experts during three on-site visits.

Television without frontiers? Great Britain: Parliament: House of Lords: European Union Committee, 2007-02-05 The draft Audiovisual Media Services (AMS) Directive published in December 2005 was met with some alarm. It sought to extend the existing Television without Frontiers Directive to new

services which were seen to be competing for audience and revenue. In doing so it would have introduced inappropriate regulation on the new media sector. There have now been some changes to the original draft and a tightening of the definition of television like services. Although an improvement the Committee is concerned that there is still not enough legal certainty. They are also worried about the need to defend the Country of Origin approach to single market legislation and reject the idea that regulators should act to preserve the market dominance of existing players from new entrants. They are also unconvinced of the need for any quantitative restriction on advertising.

Digital Empires Anu Bradford, 2023-08-28
Financial Times Best Books of 2023 in Economics. The global battle among the three dominant digital powers the United States, China and the European Union is intensifying. All three regimes are racing to regulate tech companies with each advancing a competing vision for the digital economy while attempting to expand its sphere of influence in the digital world. In *Digital Empires* her provocative follow up to *The Brussels Effect* Anu Bradford explores a rivalry that will shape the world in the decades to come. Across the globe people dependent on digital technologies have become increasingly alarmed that their rapid adoption and transformation have ushered in an exceedingly concentrated economy where a few powerful companies control vast economic wealth and political power, undermine data privacy and widen the gap between economic winners and losers. In response world leaders are variously embracing the idea of reining in the most dominant tech companies. Bradford examines three competing regulatory approaches: the American market driven model, the Chinese state driven model and the European rights driven regulatory model and discusses how governments and tech companies navigate the inevitable conflicts that arise when these regulatory approaches collide in the international domain. Which digital empire will prevail in the contest for global influence remains an open question yet their contrasting strategies are increasingly clear. Digital societies are at an inflection point. In the midst of these unfolding regulatory battles governments, tech companies and digital citizens are making important choices that will shape the future ethos of the digital society. *Digital Empires* lays bare the choices we face as societies and individuals, explains the forces that shape those choices and illuminates the immense stakes involved for everyone who uses digital technologies.

Internet Governance at the Point of No Return Rolf H. Weber, 2021-04-14. The book begins with an analysis of the technological infrastructure environment and of the manifold regulatory theories developed in the Internet Governance context. Based on this foundation the transnational normative ecosystem is outlined followed by a detailed discussion of the substantive Internet Governance principles such as legitimacy, participation, transparency, accountability. These considerations lead to the presentation of relevant international legal concepts: duty of co-operation, global public goods, shared spaces, due diligence, State responsibility that merit more attention. The outlook proposes potential approaches for improving the future of the Internet Governance design.

Handbook of Transnational Economic Governance Regimes Christian Tietje, Alan Brouder, 2009-10-14. Non governmental organizations, transnational business associations, private standard setting bodies, public private partnerships and institutionalized incentive

schemes now occupy a central place in the regulation and governance of transnational economic affairs alongside states and intergovernmental organizations Much of the literature on these new and emerging patterns of governance has focused on the legal political and normative implications of this rapidly evolving landscape The Handbook of Transnational Economic Governance Regimes expands on this scholarship by identifying describing and analysing more than 85 of the most significant actors in transnational governance The Handbook examines the origins evolution structure membership financing and strategies of key organizations and regulatory networks in almost every sphere of global economic activity and analyses their role and influence in contemporary transnational economic governance
