Landscapes of Memory and Experience

Jan Birksted, 2012-12-06 It has been argued that the history of landscape and of gardens has been marginalized from the mainstream of art history and visual studies because of a lack of engagement with the theories methods and concepts of these disciplines This book explores possible ways out of this impasse in such a way that landscape studies would become pivotal through its theoretical advances since landscape studies would challenge the underlying assumptions of traditional phenomenological theory Thus the history and theory of twentieth century landscape might not only once again share concepts and methods with contemporary art and design history but might in turn influence them A complementary sequel to Relating Architecture to Landscape this volume of essays explores further areas of interest and discussion in the landscape architecture debate and offers contributions from a team of well known researchers teachers and writers The choice of topics is wide ranging and features case studies of modern and contemporary schemes from the USA Far East and Australasia

Architecture and the Nazi Cultural Landscape David H. Haney, 2022-09-13 This book traces cultural landscape as the manifestation of the state and national community under the Nazi regime and how the Nazi era produced what could be referred to as a totalitarian cultural landscape For the Nazi regime cultural landscape was indeed a heritage resource but it was much more than that cultural landscape was the nation The project of Nazi racial purification and cultural renewal demanded the physical reshaping and reconceptualization of the existing environment to create the so called new Nazi cultural landscape One of the most important components of this was a set of monumental sites thought to embody blood and soil beliefs through the harmonious synthesis of architecture and

landscape This special group of landscape bound architectural complexes was interconnected by the new autobahn highway system itself thought to be a monumental work embedded in nature Behind this intentionally aestheticized view of the nation as cultural landscape lay the all pervasive system of deception and violence that characterized the emerging totalitarian state This is the first historical study to consider the importance of these monumental sites together with the autobahn as evidence of key Nazi cultural and geographic strategies during the pre war years This book concludes by examining racial and nationalistic themes underlying cultural landscape concepts today against this historic background *The American Architect*, 1914 **American Architect and the Architectural Review**, 1906 *Connecticut Historic Places Dictionary* Lorrie Owens, 2008-01-01 A 1 volume set that contains detailed information on the historic places in the state of Connecticut The listings in the reference work were obtained from the official list of the National Register of Historic Places in Washington DC The National Register of Historic Places is a government program designed to coordinate and support public and private efforts to identify evaluate and protect historic and archeological properties The properties include historic districts sites buildings structures and objects that are significant to American history architecture engineering and culture The entries are arranged alphabetically within each county This allows the user to find historic places by locations in Connecticut Photographs are also included in this set The Publisher used the nomination form of the Historic Place entry that describes the work in great detail The detailed historic information is not published in the National Register and is what makes this publication the definitive reference work on the Historic Places in the state of Connecticut **Architectural Record**, 1917 **The Routledge Handbook of Teaching Landscape** Karsten Jørgensen, Nilgöl Karadeniz, Elke Mertens, Richard Stiles, 2019-03-04 Written in collaboration with the European Council of Landscape Architecture Schools ECLAS and LE NOTRE The Routledge Handbook of Teaching Landscape provides a wide ranging overview of teaching landscape subjects from geology to landscape design reflecting different perspectives and practices at university level landscape curricula Focusing on the didactics of landscape education this fully illustrated handbook presents and discusses pedagogy teaching traditions experimental teaching methods and new teaching principles The book is structured into three parts reading the landscape representing the landscape and transforming the landscape Contributions from leading experts in the field such as Simon Bell Marc Treib J rg Rekittke and Susan Herrington explore landscape analysis history and theory design visualisation creativity and art planning studio teaching field trips and site engineering Aimed at engaging academic researchers and instructors across disciplines such as landscape architecture geography ecology planning and archaeology this book is a must have guide to landscape pedagogy as it stands today **Landscape Architecture** William A.
