## Processing Disorder Affect Learning in Elementary Aged Children and what is the Impact of Sensory Integration Therapy

Jessica M. Park, 2009 Children with Sensory Processing Disorder SPD have difficulty organizing and processing sensory stimuli into their daily lives. These difficulties of integrating sensory experiences can lead to other difficulties such as learning. This thesis examines critical research into the correlations between SPD and other disabilities such as Attention Deficit Hyperactivity Disorder, Learning Disabilities, and Autism Spectrum Disorders, and how the combination of these disorders affects learning. It examines the relationship between SPD and learning in elementary aged children, particularly the affects of visual and auditory processing in learning. The research suggests there may be a correlation between SPD and reading disabilities such as Dyslexia. Finally, this thesis examines the effect of Sensory Integration therapy (SIT) in improving learning. SIT has been compared with Perceptual Motor Therapy as well as academic tutoring. Parent, Teacher, and Therapist perspectives have also been considered in research. Overall, there are conflicting results as to the relationship between SPD and learning difficulties, as well as the effectiveness of SIT in the remediation of academic abilities. Still, there is enough evidence to suggest SPD is a disorder educators need to be informed about and should learn strategies for incorporating multisensory activities within the classroom. leaf 4
