Relearning To Teach Arithmetic:

Relearning Mathematics Rina Zazkis, 2011-08-01 This book is grounded in the author's experiences of teaching mathematics for prospective elementary school teachers and conducting research on their understanding of mathematical concepts. It is a reflection on practice and an attempt to cope with a double challenge that of a teacher in helping prospective teachers make sense of mathematics and that of a researcher in an attempt to understand and describe the challenges faced by students. This work fits within the current community interest on teacher education and provides a novel focus with both theoretical and practical considerations. The central claim in this book is that encounters with mathematical content by prospective elementary school teachers constitute relearning rather than learning of mathematics. The specific focus is on topics related to elementary number theory e.g. divisibility, prime factorization which is referred to as a forgotten queen following Gauss' reference to number theory as a queen of mathematics. This is the content area that has not received significant attention in mathematics education research. The book can be summarized as an attempt to address the following questions: What is relearning of mathematical content and how is it similar to or different from learning? What are the examples of specific mathematical topics or concepts that require relearning? What pedagogical approaches can support relearning? The detailed analysis of research data and pedagogical approaches presented in the book are intertwined with stories of personal experiences of the author which makes the reading not only intellectually stimulating but also enjoyable.

Teaching Resources for Low-achieving Mathematics Classes Kenneth J. Travers, 1972 Beyond Classical Pedagogy Terry Wood, Barbara Scott Nelson, Janet E. Warfield, 2014-04-04 The emergence of the National Council of Teachers of Mathematics Standards in 1989 sparked a sea change in thinking about the nature and quality of mathematics instruction in U.S. schools. Much is known about transmission forms of mathematics teaching and the influence of this teaching on students' learning, but there is still little knowledge about the alternative forms of instruction that have evolved from the recent widespread efforts to reform mathematics education. *Beyond Classical Pedagogy: Teaching Elementary School Mathematics* reports on the current state of knowledge about these new instructional practices which differ in significant ways from the traditional pedagogy that has permeated mathematics education in the past. This book provides a research-based view of the nature of facilitative teaching in its relatively mature form along with opposing views and critique of this form of pedagogy. The focus is on elementary school mathematics classrooms where the majority of the reform-based efforts

have occurred and on the micro level of teaching classroom interaction as a source for revealing the complexity involved in teaching teachers learning and the impact of both on children s learning The work in elementary mathematics teaching is situated in the larger context of research on teaching Research and insights from three disciplinary perspectives are presented the psychological perspective centers on facilitative teaching as a process of teachers learning the mathematical perspective focuses on the nature of the mathematical knowledge teachers need in order to engage in this form of teaching the sociological perspective attends to the interactive process of meaning construction as teachers and students create intellectual communities in their classrooms The multidisciplinary perspectives presented provide the editors with the necessary triangulation to provide confirming evidence and rich detail about the nature of facilitative teaching Audiences for this book include scholars in mathematics education and teacher education teacher educators staff developers and classroom teachers It is also appropriate as a text for graduate courses in mathematics education teacher education elementary mathematics teaching methods and methods of research in mathematics education
