*Mathematical Geoenergy* Paul Pukite, Dennis Coyne, Daniel Challou, 2019-01-07  
A rigorous mathematical problem solving framework for analyzing the Earth's energy resources  
GeoEnergy encompasses the range of energy technologies and sources that interact with the geological subsurface  
Fossil fuel availability studies have historically lacked concise modeling tending instead toward heuristics and overly complex processes  
Mathematical GeoEnergy Oil Discovery Depletion and Renewal details leading edge research based on a mathematically oriented approach to geoenergy analysis  
Volume highlights include Applies a formal mathematical framework to oil discovery depletion and analysis Employs first order applied physics modeling decreasing computational resource requirements Illustrates model interpolation and extrapolation to fill out missing or indeterminate data Covers both stochastic and deterministic mathematical processes for historical analysis and prediction Emphasizes the importance of up to date data accessed through the companion website Demonstrates the advantages of mathematical modeling over conventional heuristic and empirical approaches Accurately analyzes the past and predicts the future of geoenergy depletion and renewal using models derived from observed production data Intuitive mathematical models and readily available algorithms make Mathematical GeoEnergy Oil Discovery Depletion and Renewal an insightful and invaluable resource for scientists and engineers using robust statistical and analytical tools applicable to oil discovery reservoir sizing dispersion production models reserve growth and more

**A Combined Parametric and Nonparametric Approach to Time Series Analysis** Stefan Kriebol, 1999  
The analysis and prediction of natural phenomena is an interesting and challenging task  
Time series obtained from the observation of one or more features of a phenomenon are often the only access to the data generating system  
Unfortunately time series analysis is usually done by specialists in the field of the phenomenon with traditional analysis techniques  
The application of modern analysis and prediction tools is often avoided due to their complexity or the risk of failure  
This issue can be surmounted by an interdisciplinary approach  
This

work is an example for the possible synergetic effect of interdisciplinary research In the field of oceanography the coastal upwelling phenomenon is analysed in experimental studies with a numerical model in order to develop a parametric prediction model Artificial neural networks seem to be a suitable parametric model However in the field of computer science traditional artificial neural techniques showed limitations in the analysis and prediction of time series obtained from natural phenomena particularly with nonlinear and nonstationary time series Motivated by this limitations a new approach to time series analysis and prediction is presented in this work the mixture of nonparametric segmented experts MONSE The MONSE approach is exploiting the synergetic effect of a combined nonparametric and parametric analysis It is supposed to be applied to explorative time series analysis and prediction in various fields i e in a context where hardly any knowledge about the time series of concern is available
