**Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems**  
Mario Lucertini, Ana Millàn Gasca, Fernando Nicolò, 2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLO 1  
Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of science and technology have devoted much attention to the problem of technology as knowledge and to the emergence of an autonomous engineering science in the Industrial Age This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowledge linked to the consolidation of autonomous academic engineering research in the 20th century A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb

procedures But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity

Mathematical Modelling Murray S. Klamkin, 1987-01-01 Designed for classroom use this book contains short self contained mathematical models of problems in the physical mathematical and biological sciences first published in the Classroom Notes section of the SIAM Review from 1975 1985 The problems provide an ideal way to make complex subject matter more accessible to the student through the use of concrete applications Each section has extensive supplementary references provided by the editor from his years of experience with mathematical modelling

*Ways of Thinking, Ways of Seeing* Chris Bissell,Chris Dillon,2012-02-03 This fascinating book examines some of the characteristics of technological engineering models that are likely to be unfamiliar to those who are interested primarily in the history and philosophy of science and mathematics and which differentiate technological models from scientific and mathematical ones Themes that are highlighted include the role of language the models developed for engineering design have resulted in new ways of talking about technological systems communities of practice related to the previous point particular engineering communities have particular ways of sharing and developing knowledge graphical re presentation engineers have developed many ways of reducing quite complex mathematical models to more simple representations reification highly abstract mathematical models are turned into objects that can be manipulated almost like components of a physical system machines not only the currently ubiquitous digital computer but also older analogue devices slide rules physical models wind tunnels and other small scale simulators as well as mechanical electrical and electronic analogue computers mathematics and modelling as a bridging tool between disciplines This book studies primarily modelling in technological practice It is worth noting that models of the type considered in the book are not always highly valued in formal engineering education at university level which often takes an applied science approach close to that of the natural sciences something that can result in disaffection on the part of students Yet in an informal context such as laboratories industrial placements and so on a very different situation obtains A number of chapters considers such epistemological aspects as well as the status of different types of models within the engineering education community The book will be of interest to practising engineers and technologists sociologists of science and technology and historians and philosophers of science and mathematics It will also be written in a way that will be accessible to non specialists
