Computability In Context: Computation And Logic In The Real World S Barry Cooper, Andrea Sorbi, 2011-02-25 Computability has played a crucial role in mathematics and computer science leading to the discovery understanding and classification of decidable undecidable problems paving the way for the modern computer era and affecting deeply our view of the world Recent new paradigms of computation based on biological and physical models address in a radically new way questions of efficiency and challenge assumptions about the so called Turing barrier This volume addresses various aspects of the ways computability and theoretical computer science enable scientists and philosophers to deal with mathematical and real world issues covering problems related to logic mathematics physical processes real computation and learning theory At the same time it will focus on different ways in which computability emerges from the real world and how this affects our way of thinking about everyday computational issues a

Algebraic Logic and Complexity of Proofs Ivo Düntsch,Edwin Mares,2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart's work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book contains a response to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He

produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell's Collected Papers

New Computational Paradigms S.B. Cooper, Benedikt Löwe, Andrea Sorbi, 2007-11-28 This superb exposition of a complex subject examines new developments in the theory and practice of computation from a mathematical perspective with topics ranging from classical computability to complexity from biocomputing to quantum computing This book is suitable for researchers and graduate students in mathematics philosophy and computer science with a special interest in logic and foundational issues Most useful to graduate students are the survey papers on computable analysis and biological computing Logicians and theoretical physicists will also benefit from this book

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy

and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

Logic, Rationality, and Interaction Hans van Ditmarsch, Jerome Lang, Shier Ju, 2011-10-07 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the Third International Workshop on Logic Rationality and Interaction LORI 2011 held in Guangzhou China in October 2011 The 25 revised full papers presented together with 12 posters were carefully reviewed and selected from 52 submissions Among the topics covered are semantic models for knowledge for belief and for uncertainty dynamic logics of knowledge information flow and action logical analysis of the structure of games belief revision belief merging logics and preferences compact preference representation logics of intentions plans and goals logics of probability and uncertainty logical approaches to decision making and planning argument systems and their role in interaction norms normative interaction and normative multiagent systems and logical and computational approaches to social choice

The Life and Work of Leon Henkin María Manzano, Ildikó Sain, Enrique Alonso, 2014-10-23 This is a comprehensive book on the life and works of Leon Henkin 1921–2006 an extraordinary scientist and excellent teacher whose writings became influential right from the beginning of his career with his doctoral thesis on The completeness of formal systems under the direction of Alonzo Church Upon the invitation of Alfred Tarski Henkin joined the Group in Logic and the Methodology of Science in the Department of Mathematics at the University of California Berkeley in 1953 He stayed with the group until his retirement in 1991 This edited volume includes both foundational material and a logic perspective Algebraic logic model theory type theory completeness theorems philosophical and foundational studies are among the topics covered as well as mathematical education The work discusses Henkin's intellectual development his relation to his predecessors and contemporaries and his impact on the recent development of mathematical logic It offers a valuable reference work for researchers and students in the fields of philosophy mathematics and computer science

Logic, Language, Information, and Computation Juliette Kennedy, Ruy J.G.B. de Queiroz, 2017-07-10 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 24th Workshop on Logic Language Information and Communication WoLLIC 2017 held in London UK in August 2017 The 28 contributed papers were carefully reviewed and selected from 61 submissions They cover interdisciplinary research in pure and applied logic aiming at interactions between logic and the sciences related to information and computation

Nonclassical Logics and Their Applications Shier Ju, Alessandra Palmigiano, Minghui Ma, 2020-01-31 This edited book focuses on non classical logics and their applications highlighting the rapid advances and the new perspectives that are emerging in this area Non classical logics are logical formalisms that violate or go beyond classical logic laws and their

specific features make them particularly suited to describing and reason about aspects of social interaction The richness and diversity of non classical logics mean that this area is a natural catalyst for ideas and insights from many different fields from information theory to game theory and business science This volume is the post proceedings of the 8th International Conference on Logic and Cognition held at Sun Yat Sen University Institute of Logic and Cognition ILC in Guangzhou China in December 2016 The conference series started in 2001 and is organized by the ILC often in collaboration with various international research groups This eighth installment was jointly organized by ILC and Alessandra Palmigiano s Applied Logic research group The conference series aims to foster the development of effective logical tools to study social behavior from a philosophical cognitive and formal perspective in order to challenge the field of logic in ways that open up new and exciting research directions Chapter The Category of Node and Choice Forms with Subcategories for Choice Sequence Forms and Choice Set Forms of this book is available open access under a CC BY 4 0 license at link.springer.com
