Mathematical Models of Small Watershed Hydrology and Applications Vijay P. Singh, Donald K. Frevert, 2002
Comprehensive account of some of the most popular models of small watershed hydrology and application of interest to all hydrologic modelers and model users and a welcome and timely edition to any modeling library **Watershed Models**
Vijay P. Singh, Donald K. Frevert, 2010-09-28 Watershed modeling is at the heart of modern hydrology supplying rich information that is vital to addressing resource planning environmental and social problems Even in light of this important role many books relegate the subject to a single chapter while books devoted to modeling focus only on a specific area of application Recognizing the **MathMod2**, 2002 **Water Resources Management**, 2006 Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can

be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned Floods in a Changing Climate P. P. Mujumdar,D. Nagesh Kumar,2012-11-22

Various modeling methodologies are available to aid planning and operational decision making this book synthesises these with an emphasis on methodologies applicable in data scarce regions such as developing countries Problems included in each chapter and supported by links to available online data sets and modeling tools engage the reader with practical applications of the models Academic researchers in the fields of hydrology climate change and environmental science and hazards and professionals and policy makers working in hazard mitigation remote sensing and hydrological engineering will find this an invaluable resource This volume is the second in a collection of four books on flood disaster management theory and practice within the context of anthropogenic climate change The others are Floods in a Changing Climate Extreme Precipitation by Ramesh Teegavarapu Floods in a Changing Climate Inundation Modelling by Giuliano Di Baldassarre and Floods in a Changing Climate Risk Management by Slodoban P Simonovi Mathematical Models of Large Watershed Hydrology Vijay P.
