Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free **Early Periodical Indexes** Robert Balay, 2000 Balay s Early Periodical Indexes is the most comprehensive guide available to the indexing of periodical literature from the 16th century until the end of the 19th century limited in scope to European languages The material itself is widely scattered difficult to find and until now without a systematic way to identify it This extraordinarily useful tool lists and describes titles in a wide range of disciplines including indexes published prior to 1900 that are restricted to periodicals such as Poole s those published later such as Wellesley as well as serial and topical bibliographies citing publications in all formats and Balay explains the relationships among them Electronic databases both Web based and CD ROMs are included Indexes are by author title topical subjects and dates of coverage This landmark resource should be a familiar sight in every research library

**Mathematical Reviews** , 1999 **Bulletin - Institute of Mathematical Statistics** Institute of Mathematical Statistics, 1992 *Women in the Biological Sciences* Carol A. Biermann, Louise S. Grinstein, Rose K. Rose, 1997-07-16 Biology textbooks and books on the history of science generally give a limited picture of the roles women have played in the growth and development of the biological sciences mentioning primarily the Nobel laureates This book provides a definitive archival collection of essays on a larger group of women profiling both their work and their lives The volume includes 65 representative women from different countries and eras and from as many branches of biological investigation as possible In addition to biographical information and an evaluation of the woman s career and significance each entry provides a full

bibliographic listing of works by and about the subject The volume includes entries on women who have gained recognition through attainment of advanced degrees despite familial and societal pressures innovative research results influence exerted in teaching and guidance of students active participation and leadership in professional societies extensive scholarly publication participation on journal editorial boards extensive field experience and influence on public and political scientific policymaking A woman was considered eligible for inclusion if she met several of these criteria Providing a historical perspective the book is limited to women who were born before 1930 or are deceased **Walford's Guide to Reference**

Gray,Karen Hunger Parshall,2011-08-31 Algebra as a subdiscipline of mathematics arguably has a history going back some 4000 years to ancient Mesopotamia The history however of what is recognized today as high school algebra is much shorter extending back to the sixteenth century while the history of what practicing mathematicians call modern algebra is even shorter still The present volume provides a glimpse into the complicated and often convoluted history of this latter conception of algebra by juxtaposing twelve episodes in the evolution of modern algebra from the early nineteenth century work of Charles Babbage on functional equations to Alexandre Grothendieck s mid twentieth century metaphor of a rising sea in his categorical approach to algebraic geometry In addition to considering the technical development of various aspects of algebraic thought the historians of modern algebra whose work is united in this volume explore such themes as the changing aims and organization of the subject as well as the often complex lines of mathematical communication within and across national boundaries Among the specific algebraic ideas considered are the concept of divisibility and the introduction of non commutative algebras into the study of number theory and the emergence of algebraic geometry in the twentieth century The resulting volume is essential reading for anyone interested in the history of modern mathematics in general and modern algebra in particular It will be of particular interest to mathematicians and historians of mathematics *Catalogue* American Mathematical Society,2000 *Index to American Reference Books Annual, 1990-1994* D Aviva Rothschild,1994-07-15 The annuals to which this is the index are cited in Sheehy and BCL3 This five year index gives access to 8771 reviews of references reviewed in ARBA volumes 16 through 20 American Reference Books Annual ARBA is an essential tool not only for libraries but for reference book publishers as well we at Book News would not be without it and is cited in BCL3 Sheehy and Walford This five year cumulative index provides access by subject title and author to reviews of
