Mathematical Structures Of Nonlinear Science:

Mathematical Structures of Nonlinear Science Melvyn S. Berger, 2012-12-06 This is the first volume of a series of books that will describe current advances and past accompli shments of mathemat i ca 1 aspects of nonlinear sCience taken in the broadest contexts This subject has been studied for hundreds of years yet it is the topic in which a number of outstanding di scoveri es have been made in the past two decades Clearly this trend will continue In fact we believe some of the great scientific problems in this area will be clarified and perhaps resolved One of the reasons for this development is the emerging new mathematical ideas of nonlinear science It is clear that by looking at the mathematical structures themselves that underlie experiment and observation that new vistas of conceptual thinking lie at the foundation of the unexplored area in this field To speak of specific examples one notes that the whole area of bifurcation was rarely talked about in the early parts of this century even though it was discussed mathematically by Poi ncare at the end of the ni neteenth century I n another di rect ion turbulence has been a key observation in fluid dynamics yet it was only recently in the past decade that simple computer studies brought to light simple dynamical models in which chaotic dynamics hopefully closely related to turbulence can be observed Nonlinear Systems and Their Remarkable Mathematical Structures Norbert Euler, Maria Clara Nucci, 2019-12-06 Nonlinear Systems and Their Remarkable Mathematical Structures Volume 2 is written in a careful pedagogical manner by experts from the field of nonlinear differential equations and nonlinear dynamical systems both continuous and discrete This book aims to clearly illustrate the mathematical theories of nonlinear systems and its progress to both non experts and active researchers in this area Just like the first volume this book is suitable for graduate students in mathematics applied mathematics and engineering sciences as well as for researchers in the subject of differential equations and dynamical systems Features Collects contributions on recent advances in the subject of nonlinear systems Aims to make the advanced mathematical methods accessible to the non experts Suitable for a broad readership including researchers and **Nonlinear Systems and Their Remarkable** graduate students in mathematics and applied mathematics Mathematical Structures Taylor & Francis Group, 2020-12-18 Nonlinear Systems and Their Remarkable Mathematical Structures aims to describe the recent progress in nonlinear differential equations and nonlinear dynamical systems both continuous and discrete Written by experts each chapter is self contained and aims to clearly illustrate some of the mathematical theories of nonlinear systems The book should be suitable for some graduate and postgraduate students in mathematics the natural sciences and engineering sciences as well as for researchers both pure and applied interested in nonlinear systems. The common theme throughout the book is on solvable and integrable nonlinear systems of equations and methods theories that can be applied to analyze those systems Some applications are also discussed Features Collects contributions on recent advances in the subject of nonlinear systems Aims to make the advanced mathematical methods accessible to the non expert in this field Written to be accessible to some graduate and postgraduate students in mathematics and applied mathematics Serves as a literature source in nonlinear systems Mathematical Structures in Continuous Dynamical Systems E. W. C. van Groesen, Eduardus Marie de Jager, 1994 This work addresses several aspects of continuous dynamical systems all of which can be viewed as generalizations of methods from classical mechnics Equations such as the Korteweg de Vries non linear Schrodinger Sine Gordon and Boussinesq equations are treated in detail Nonlinear Systems and Their Remarkable Mathematical Structures Volumes 1 2 And 3 Taylor & Francis Group, 2021-09-30

Nonlinear Science Zensho Yoshida,2010-03-10 Modern science has abstracted as compensation for establishing rigorousness the complexity of the real world and has inclined toward oversimpli ed ctitious n ratives as a result a disjunction has emerged between the wisdom of science and reality Re ecting on this we see the need for science to recover reality can it reveal new avenues for thought and investigation of the complexity The study of science is the pursuit of clarity and distinctness Physics after Galilei placed it in the realm of mathematics has been trying to establish clearness by mathematical logic While physics and mathematics respectively have different intellectual incentives they have intersected in history on countless occasions and have woven a awless system of wisdom The core of rigorous science is always made of mathematical logic the laws of science cannot be represented without the language of mathematics Conversely it is undoubtedly dif cult to stimulate ma ematical intellect without a reference to the interests of science that are directed to the real world However various criticisms have been raised against the discourses of sciences that explain the events of the real world as if they are governed by mathematical laws Sciences being combined with technologies have permeated in the form of technical rationalism the domain of life politics and even the psychological world The criticisms accuse seemingly logical scientic narratives of being responsible for widespread destruction and emergence of crises unprecedented suffering of hum ity

Nonlinear Systems and Their Remarkable Mathematical Structures Norbert Euler, Da-jun Zhang, 2021-09-07 The third volume in this sequence of books consists of a collection of contributions that aims to describe the recent progress in nonlinear differential equations and nonlinear dynamical systems both continuous and discrete Nonlinear Systems and Their Remarkable Mathematical Structures Volume 3 Contributions from China just like the first two volumes consists of contributions by world leading experts in the subject of nonlinear systems but in this instance only featuring contributions by leading Chinese scientists who also work in China in some cases in collaboration with western scientists Features Clearly illustrate the mathematical theories of nonlinear systems and its progress to both the non expert and active researchers in this area Suitable for graduate students in Mathematics Applied Mathematics and some of the Engineering sciences Written in a careful pedagogical manner by those experts who have been involved in the research themselves and each contribution is reasonably self contained
