**Mathematics in the Primary School** Christine Hopkins,Susan Gifford,Sandy Pepperell,1996      Mathematics in the Primary School Sandy Pepperell,Christine Hopkins,Sue Gifford,Peter Tallant,2014-03-18 Now in its third edition Mathematics in the Primary School has been updated to reflect recent mathematics curriculum documentation and revised standards for QTS Key areas include The role of talk in learning maths Teacher questioning Development of children s reasoning Creative engagement with maths Assessment for learning and self assessment Suggested resources for teachers including ICT Providing a coherent set of principles for teaching primary mathematics across the main topics in the curriculum the authors explore children s understanding of key areas of mathematics at reception infant and junior levels Important principles and teaching approaches are identified including the use of calculators and computers and there is an emphasis on mental mathematics and problem solving supporting key issues raised by the Williams review 2008 Case studies are used throughout to illustrate how different teaching approaches are put into practice and how children respond to them and there is advice on planning organisation and assessment of mathematical learning in the classroom Emphasising the importance of teachers own mathematical knowledge and offering clear guidance and practical advice this book is essential reading for students NQTs and practising teachers with a focus on primary mathematics      Teaching and Learning with ICT in the Primary School Marilyn Leask,John Meadows,2000 Teaching and Learning with ICT in the Primary School introduces teachers to the range of ways in which ICT can be used to support and extend the teaching and learning opportunities in their classrooms Chapters cover areas such as literacy numeracy science and their relationship with ICT managing curriculum projects using ICT creating and using multimedia applications Ideas and activities for teachers to try are based on tried and tested methods from innovative schools around the UK and abroad Practising teachers and students will find this an invaluable guide on how to work together to extend their skills and knowledge in the area of ICT      **Mathematics in the Primary School** Sandy Pepperell,2009 First published in 1996      **Meeting the Standards in Primary Mathematics** Tony Brown,2003-09-02 Written in response to the new ITT NC requirements for student teachers Comprehensive guide covering all aspects of primary teacher training relating to mathematics and the Standards required to reach qualified teacher status A strong and adoptable series for all ITT courses Informs teachers of exactly what they need to know to teach the subject and provides further information in continuing professional development issues There is increasing pressure on student teachers to develop their subject classroom competence in a short space of time this should help relieve the burden Part of the successful Meeting the Standards Series which students on BEd and PGCE courses and teachers will already be familiar with Includes a chapter dealing with the transition from teacher training to being a Newly Qualified Teacher      *Dyslexia, Dyspraxia and Mathematics* Dorian Yeo,2008-04-30 Written by a teacher with many years experience of teaching mathematics to primary school dyslexic and dyspraxic children with a wide range of abilities this book is designed to be a practical teaching guide It

offers detailed guidance and specific teaching suggestions to all specialist teachers support teachers classroom teachers and parents who either directly teach mathematics to dyslexic and dyspraxic children or who support the mathematics teaching programmes of dyslexic or dyspraxic children Although the book has grown out of teaching experience it is also informed by widely acknowledged contemporary and international research which explores the cognitive aspects of learning mathematics and tries to understand why it is that some children fail to learn mathematics Many of the teaching principles described in the text have specific and quite far reaching implications The theoretical arguments should therefore also be of interest to special needs co ordinators heads of maths departments head teachers or other professionals who are responsible for designing or modifying the maths learning programmes of children with special learning and maths difficulties In more general terms the book hopes to contribute to the broad discussion of the cognitive features and educational needs of dyslexic and dyspraxic children

*Issues In Teaching Numeracy In Primary Schools* Thompson, Ian, 2010-06-01 The new edition of this bestselling book provides an accessible guide to a wide range of research evidence about teaching and learning mathematics

**Mathematics Performance in Primary Schools** Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2009 In 2007 08 the National Strategy to improve performance in primary mathematics cost some 104 million to implement The Strategy aims to raise performance through extensive teaching and learning resources supported by professional development programmes for teachers In 2006 07 some 2 3 billion was spent on teaching mathematics in primary schools out of a total expenditure of 10 billion on primary teaching and teaching support staff Yet improvements in the mathematics results of primary school pupils have levelled off since 2000 In 2008 79 per cent of pupils met the Government s expected standard at Key Stage 2 age 11 This means that over one in five children are starting secondary school without a secure foundation in mathematics There are persistent gaps in the mathematics performance of primary school pupils from different backgrounds and with different characteristics In contrast to other subjects boys are making more progress than girls The biggest attainment gap 18 percentage points is related to deprivation Performance varies across England and between local authorities with the percentage of pupils achieving the expected standard at KS2 ranging from 70 to 87 per cent The Primary National Strategy has contributed to improvements in primary mathematics teaching and learning but weaknesses persist in vital areas such as the use and application of mathematics to real life situations and the assessment of pupils progress The lack of depth in subject knowledge of many primary school teachers and the lack of take up of continuing professional development in mathematics are major concerns which the Department has only recently begun to address through a ten year programme to train 13 000 specialist teachers

**Understanding Mathematics in the Lower Primary Years** Derek Haylock, Anne D Cockburn, 1997-04-28 This is a substantially revised and expanded edition of the authors earlier book *Understanding Early Years Mathematics* It is written for teachers and student teachers working with children 4 8 It aims to provide them with a clearer understanding of the mathematical material they

deal with in the classroom This revised edition includes new chapters on number patterns and calculations data handling and the characteristic ways of thinking mathematically that are at the heart of using and applying mathematics Each chapter includes a section of activities for use with children annotated suggestions for further reading and a summary of key ideas

Leading Primary Mathematics Catherine Foley, Jane McNeill, Stephanie Suter, 2019-03-18 This book provides guidance and insight into what mathematics leadership looks like in practice and shows readers how they can develop from a confident teacher into a curriculum subject leader It does this through a careful blend of pedagogy and practical application supported by a range of real world case studies and opportunities to reflect critically on classroom practice Key coverage includes The planning and application that underpins subject leadership How international perspectives can influence leadership of mathematics How to develop fluency through problem solving and reasoning How to champion inclusive practice in mathematics Assessing children's understanding This is essential reading for anyone studying primary mathematics on initial teacher education courses including undergraduate BA Ed BA with QTS and postgraduate PGCE PGDE School Direct and SCITT routes NQTs seeking to develop into curriculum leadership roles and those already leading mathematics in their school

**Assessment in Geographical Education: An International Perspective** Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27 In recent years there has been increased attention paid to the importance of assessment in Geographical Education the chosen subject for this book Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students teachers parents and policymakers To be effective assessment needs to be valid reliable and fair Validity is about ensuring that we assess what we claim we are assessing Reliability is about measuring performance and understanding in a consistent way Without validity and reliability assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning While there is a substantial literature on evidence based assessment in secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia USA South Korea Germany Switzerland and Singapore What unifies the work in this book is

that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student s knowledge and skills

**Researching and Using Progressions (Trajectories) in Mathematics Education** ,2019-02-04 The relationship between research and practice has long been an area of interest for researchers policy makers and practitioners alike One obvious arena where mathematics education research can contribute to practice is the design and implementation of school mathematics curricula This observation holds whether we are talking about curriculum as a set of broad measurable competencies i e standards or as a comprehensive set of resources for teaching and learning mathematics Impacting practice in this way requires fine grained research that is focused on individual student learning trajectories and intimate analyses of classroom pedagogical practices as well as large scale research that explores how student populations typically engage with the big ideas of mathematics over time Both types of research provide an empirical basis for identifying what aspects of mathematics are important and how they develop over time This book has its origins in independent but parallel work in Australia and the United States over the last 10 to 15 years It was prompted by a research seminar at the 2017 PME Conference in Singapore that brought the contributors to this volume together to consider the development and use of evidence based learning progressions trajectories in mathematics education their basis in theory their focus and scale and the methods used to identify and validate them In this volume they elaborate on their work to consider what is meant by learning progressions trajectories and explore a range of issues associated with their development implementation evaluation and on going review Implications for curriculum design and future research in this field are also considered Contributors are Michael Askew Tasos Barkatsas Michael Belcher Rosemary Callingham Doug Clements Jere Confrey Lorraine Day Margaret Hennessey Marj Horne Alan Maloney William McGowan Greg Oates Claudia Orellana Julie Sarama Rebecca Seah Meetal Shah Dianne Siemon Max Stephens Ron Tzur and Jane Watson

Pupils in Transition John Gardner,Professor Gill Nicholls,2013-03-07 Focusing on the move from primary to secondary school this book aims to help teachers and school managers to recognize and deal with the often traumatic effects that this transition has on young people s lives The book explores the links between primary and secondary

curricula offers specific advice on how to meet the needs of children in transition provides materials for investigating transition which will enable schools to identify the strengths and weaknesses in their approach *Primary Mathematics: Teaching Theory and Practice* Claire Mooney, Mary Briggs, Alice Hansen, Judith McCullouch, Mike Fletcher, 2021-02-10 An extensive knowledge of the primary Mathematics curriculum is not enough for you as a trainee teacher you need to know how to teach Mathematics in the primary classroom This is the essential teaching theory and practice text for primary Mathematics that takes a focused look at the practical aspects of teaching It covers the important skills of classroom management planning monitoring and assessment and relates these specifically to primary Maths Practical guidance features and resources help you translate your learning to the classroom and understand the wider context of teaching Online practical lesson ideas for the classroom The Primary National Curriculum for Mathematics in Key Stages one and two Tips for planning primary Maths Useful weblinks for primary Mathematics teaching The ninth edition of this popular book includes a new chapter on Mathematics in the primary classroom exploring primary mathematics teaching today It is also updated to include the new Ready to progress criteria **Educating Tomorrow's Engineers** Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-02-08 In the UK we teach young people to become computer users and consumers rather than programmers and software engineers This is creating a chronic skills gap in ICT We need around 82 000 engineers and technicians just to deal with retirements up to 2016 and 830 000 SET professionals by 2020 On the plus side the Government's proposal to include computer science as a fourth science option to count towards the EBac is welcomed The Committee also welcomes the EBac's focus on attainment of mathematics and science GCSEs but is concerned that subjects such as Design and Technology D T might be marginalised A Technical Baccalaureate TechBac is being designed but if it is to be a success schools should be incentivised to focus on the TechBac by making it equivalent to the EBac Reforms to vocational education following the Wolf Review meant that Level 2 of the Engineering Diploma a qualification highly regarded would count as equivalent to one GCSE despite requiring curriculum time and effort equivalent to several GCSEs The Engineering Diploma however is currently being redesigned as four separate qualifications The Committee also expressed concerns over the Department for Education's DfE lack of clarity on its research budget and use of evidence in decision making The DfE needs to place greater focus on gathering evidence before changes to qualifications are made and must leave sufficient time for evidence to be gathered on the effectiveness of policies before introducing further change The possibility of gathering evidence from randomised controlled trials RCTs should be seriously considered
