An illustration of a whimsical desert scene at night. A small, white, round robot with large, expressive eyes and a propeller on its head is flying in the sky. A crescent moon and stars are visible in the dark blue night sky. In the foreground, a small brown owl is perched on a large, green saguaro cactus. The background features rolling desert hills and several other cacti under a soft purple and pink twilight glow.

Gray,Anton Leijnse,Randall L. Kolar,Cheryl A. Blain,2020-01-29 Mathematical Tools for Changing Scale in the Analysis of Physical Systems presents a new systematic approach to changing the spatial scale of the differential equations describing science and engineering problems It defines vectors tensors and differential operators in arbitrary orthogonal coordinate systems without resorting to conceptually difficult Riemann Christoffel tensor and contravariant and covariant base vectors It reveals the usefulness of generalized functions for indicating curvilinear surficial or spatial regions of integration and for transforming among these integration regions These powerful mathematical tools are harnessed to provide 128 theorems in tabular format most not previously available in the literature that transform time derivative and del operators of a function at one scale to the corresponding operators acting on the function at a larger scale Mathematical Tools for Changing Scale in the Analysis of Physical Systems also provides sample applications of the theorems to obtain continuum balance relations for arbitrary surfaces multiphase systems and problems of reduced dimensionality The mathematical techniques and tabulated theorems ensure the book will be an invaluable analysis tool for practitioners and researchers studying balance equations for systems encountered in the fields of hydraulics hydrology porous media physics structural analysis chemical transport heat transfer and continuum mechanics     **Subject Guide to Books in Print** ,1997
