Scientific & Mathematical Bodies SungWon Hwang, Wolff-Michael Roth, 2011-11-19 This book is about the sensuous living body without which individual knowing and learning is impossible It is the interface between the individual and culture Recent scholarship has moved from investigated knowing and learning as something in the mind or brain to understanding these phenomena in terms of the body embodiment literature or culture social constructivism These two literatures have expanded the understanding of cognition to include the role of the body in shaping the mind and to recognize the tight relation between mind and culture However there are numerous problems arising from ways in which the body and culture are thought in these separate research domains In this book the authors present an interdisciplinary scientific initiative that brings together the concerns for body and for culture to develop a single theory of cognition centered on the living and lived body This book thereby contributes to bridging the gap that currently exists between theory knowing that and praxis
