Korn, Theresa M. Korn, 2013-04-26 Convenient access to information from every area of mathematics Fourier transforms Z transforms linear and nonlinear programming calculus of variations random process theory special functions combinatorial analysis game theory much more **Mathematics for Engineers and Scientists** A. Jeffrey, 1996-09-15 Undergraduate text **Worked Examples in Mathematics for Scientists and Engineers** Geoffrey Stephenson, 1985-01-01 **Advanced Mathematical Methods for Scientists and Engineers I** Carl M. Bender, Steven A. Orszag, 1999-10-29 A clear practical and self contained presentation of the methods of asymptotics and perturbation theory for obtaining approximate analytical solutions to differential and difference equations Aimed at teaching the most useful insights in approaching new problems the text avoids special methods and tricks that only work for particular problems Intended for graduates and advanced undergraduates it assumes only a limited familiarity with differential equations and complex variables The presentation begins with a review of differential and difference equations then develops local asymptotic methods for such equations and explains perturbation and summation theory before concluding with an exposition of global asymptotic methods Emphasizing applications the discussion stresses care rather than rigor and relies on many well chosen examples to teach readers how an applied mathematician tackles problems There are 190 computer

generated plots and tables comparing approximate and exact solutions over 600 problems of varying levels of difficulty and an appendix summarizing the properties of special functions
