Mathematics Of Stochastic Manufacturing Systems:

Hierarchical Decision Making in Stochastic Manufacturing Systems Suresh P. Sethi, Qing Zhang, 2012-12-06 One of the most important methods in dealing with the optimization of large complex systems is that of hierarchical decomposition. The idea is to reduce the overall complex problem into manageable approximate problems or subproblems to solve these problems and to construct a solution of the original problem from the solutions of these simpler problems Development of such approaches for large complex systems has been identified as a particularly fruitful area by the Committee on the Next Decade in Operations Research 1988 42 as well as by the Panel on Future Directions in Control Theory 1988 65 Most manufacturing firms are complex systems characterized by sev eral decision subsystems such as finance personnel marketing and op erations They may have several plants and warehouses and a wide variety of machines and equipment devoted to producing a large number of different products Moreover they are subject to deterministic as well as stochastic discrete events such as purchasing new equipment hiring and layoff of personnel and machine setups failures Mathematics of Stochastic Manufacturing Systems George Yin, Qing Zhang, 1997-01-01 In this volume and repairs leading experts in mathematical manufacturing research and related fields review and update recent advances of mathematics in stochastic manufacturing systems and attempt to bridge the gap between theory and applications The topics covered include scheduling and production planning modeling of manufacturing systems hierarchical control for large and complex systems Markov chains queueing networks numerical methods for system approximations singular perturbed systems risk sensitive control stochastic optimization methods discrete event systems and statistical quality control
