Usability Niels Ole Bernsen, Laila Dybkjær, 2009-10-03 This preface tells the story of how Multimodal Usability responds to a special challenge Chapter 1 describes the goals and structure of this book The idea of describing how to make multimodal computer systems usable arose in the European Network of Excellence SIMILAR Taskforce for creating human machine interfaces SIMILAR to human human communication 2003 2007 www.similar.cc SIMILAR brought together people from multimodal signal processing and usability with the aim of creating enabling technologies for new kinds of multimodal systems and demonstrating results in research prototypes Most of our colleagues in the network were in fact busy extracting features and figuring out how to demonstrate progress in working interactive systems while claiming not to have too much of a notion of usability in system development and evaluation It was proposed that the authors support the usability of the many multimodal prototypes underway by researching and presenting a methodology for building usable multimodal systems We accepted the challenge first and foremost no doubt because the formidable team spirit in SIMILAR could make people accept outrageous things Second having worked for nearly two decades on making multimodal systems usable we were curious curious at the opportunity to try to understand what happens to traditional usability work that is work in human computer interaction centred around traditional graphical user interfaces GUIs when systems become as multimodal and as advanced in other ways as those we build in research today New Seasons Course Book 4, 2/e Manuja Sarita, 2007-09 *Education* 3-13 Mark Brundrett, 2013 There is a growing interest internationally in research that helps us to understand the best ways to help young children engage with the curriculum in order that they may have the best possible life chances This text helps to address these issues and consists of seminal articles derived from the forty year history of the journal *Education* 3 13

Mathematical Subjects Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the

design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other
