Matrices and Society Ian Bradley, Ronald L. Meek, 2014-07-14 Matrices offer some of the most powerful techniques in modern mathematics. In the social sciences they provide fresh insights into an astonishing variety of topics. Dominance matrices can show how power struggles in offices or committees develop. Markov chains predict how fast news or gossip will spread in a village. Permutation matrices illuminate kinship structures in tribal societies. All these invaluable techniques and many more are explained clearly and simply in this wide-ranging book. Originally published in 1986, The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

quantitative study of scientific communication challenges science and technology studies by demonstrating that organized knowledge production and control is amenable to measurement First the various dimensions of the empirical study of the sciences are clarified in a methodological analysis of theoretical traditions including the sociology of scientific knowledge and neo conventionalism in the philosophy of science Second the author argues why the mathematical theory of communication enables us to address crucial problems in science and technology studies both on the qualitative side e g the significance of a reconstruction and on the quantitative side e g the prediction of indicators A comprehensive set of probabilistic entropy measures for studying complex developments in networks is elaborated In the third part of the study applications to S T policy questions e g the emergence of a European R D system to problems of Bayesian knowledge representations and to the study of the sciences in terms of self organizing paradigms of scientific communication are provided A discussion of directions for further research concludes the study
