Patel, F. Shadpey, 2005-05-04 This monograph provides a comprehensive and thorough treatment of the problem of controlling a redundant robot manipulator It presents the latest research from the field with a good balance between theory and practice All theoretical developments are verified both via simulation and experimental work on an actual prototype redundant robot manipulator This book is the first text aimed at graduate students and researchers working in the area of redundant manipulators giving a comprehensive coverage of control of redundant robot manipulators from the viewpoint of theory and experimentation H-infinity Control and Estimation of State-multiplicative Linear Systems Eli Gershon, Uri Shaked, Isaac Yaesh, 2005-06-24 Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector Such systems are relevant for example in radar measurements where larger ranges involve higher noise level This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions Topics covered include convex H_2 and H_∞ norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic and static output feedback of stochastic bilinear systems tracking controllers for stochastic bilinear systems utilizing preview information Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered two such examples are taken from the aerospace and guidance control areas Hybrid Estimation of Complex Systems Michael W. Hofbaur, 2005-06-09 This monograph provides a tool set for hybrid estimation that can successfully monitor the behavior of complex artifacts with a large number of possible operational and failure modes such as production plants automotive or aeronautic systems and autonomous robots For this purpose ideas from the fields of System Theory and Artificial Intelligence are taken and hybrid estimation is reformulated as a search problem This allows to focus the estimation onto highly probably operational modes without missing symptoms that might be hidden among the noise in the system Additionally a novel approach to continue hybrid estimation in the presence of unknown behavioral modes and to automate system analysis and synthesis tasks for on line operation are presented This leads to a flexible model based hybrid estimation scheme for complex artifacts that robustly

 develops for the first time a complete and connected nonlinear theory for the analog Phase Locked Loop PLL which clarifies
 the obscure points of its complex non linear behaviour The book suggests new non linear models for the PLL components and
 applies the averaging method to analyse PLL The book presents the physical interpretation of the PLL operation locates the
 difficulties presented by its operation and suggests solutions to overcome these problems Finally it provides closed form
 expressions for all the important measures of the PLL and proposes new design criteria Mechatronic Servo System
Control Masatoshi Nakamura,Satoru Goto,Nobuhiro Kyura,2004-06-08 This monograph presents the fundamentals as well as
 the application techniques of servo control systems which are a key element of Mechatronics The industrial applications and
 problems of Mechatronic Servo System Control are demonstrated as well as its theoretical and applicable solutions The book
 is unique in its kind in converting a know how only suitable for special situations until now into a more universal technology
 This introductory monograph is aiming at students and engineers who are involved in the field of Mechatronics and Robotics
