Matter Of Life The Story Of A Medical Breakthrough:

A matter of life, the story of a medical breakthrough Robert Edwards, 1976 **Nobel Lectures In Physiology Or Medicine (2006-2010)** Goran K Hansson, 2015-02-16 Physiology or medicine was the third prize area Alfred Nobel mentioned in his will Nobel had an active interest in medical research He came into contact with Swedish physiologist J ns Johansson through Karolinska Institute around 1890 Johansson worked for a brief period in Nobel s laboratory in Sevrans France during the same year The Nobel Prize in Physiology or Medicine is awarded by the Nobel Assembly at Karolinska Institute This volume is a collection of the Nobel lectures delivered by the Nobel Laureates together with their biographies and the presentation speeches for the period 2006 2010 List of Laureates and their award citations 2006 Andrew Z Fire and Craig C Mello for their discovery of RNA interference gene silencing by double stranded RNA 2007 Mario R Capecchi Martin J Evans and Oliver Smithies for their discoveries of principles for introducing specific gene modifications in mice by the use of embryonic stem cells 2008 Harald zur Hausen for his discovery of human papilloma viruses causing cervical cancer and Fran oise Barr Sinoussi and Luc Montagnier for their discovery of human immunodeficiency virus 2009 Elizabeth H Blackburn Carol W Greider and Jack W Szostak for the discovery of how chromosomes are protected by telomeres and the enzyme telomerase 2010 Robert G Edwards for the development of in vitro fertilization Who's Afraid of Human Cloning? Gregory E. Pence, 1998 Gregory Pence offers a candid look at the arguments for and against human cloning A Matter of Life, the Story of a Medical Breakthrough Robert Geoffrey Edwards, Patrick Christopher Steptoe, 1980 The two British scientists responsible for the first successful test tube baby recount the research work and luck that led to their momentous scientific achievement **Babies for Sale?** Miranda Davies, 2017-03-15 Transnational surrogacy the creation of babies across borders has become big business Globalization reproductive technologies new family formations and rising infertility are combining to produce a quiet revolution in social and medical ethics and the nature of parenthood Whereas much of the current scholarship has focused on the US and India this groundbreaking anthology offers a far wider perspective Featuring contributions from over thirty activists and scholars from a range of countries and disciplines this collection offers the first genuinely international study of transnational surrogacy Its innovative bottom up approach rooted in feminist perspectives gives due prominence to the voices of those most affected by the global surrogacy chain namely the surrogate mothers donors prospective parents and the children themselves Through case studies ranging from Israel to Mexico the book outlines the forces that are driving the growth of transnational surrogacy as well as its implications for feminism human rights motherhood and masculinity **Stealing Dreams** Mary Dodge, Gilbert Geis, 2003 When three whistle blowers informed authorities and the media in 1995 that doctors at the prestigious and lucrative Center for Reproductive Health a fertility clinic operated by the University of California Irvine UCI were taking eggs from some women and implanting them into others without donor consent a scandal unfolded that ended careers destroyed reputations and forever altered the lives

of many families This first incident of egg and embryo theft as well as claims of insurance fraud research misconduct and misappropriation of funds grabbed headlines around the world and was featured on television programs from Primetime to The Oprah Winfrey Show By the time the scandal had subsided several years later two of the clinic's preeminent physicians had fled the country to avoid prosecution one doctor was convicted on criminal charges in a highly controversial trial and UCI had paid over twenty million dollars to settle lawsuits filed by former patients The full story behind the much publicized case is unveiled for the first time in this riveting book The authors untangle an intricate web of repeated cover ups scapegoats evasions self interest nastiness and injustice They scrutinize how a complex interplay of circumstances set the stage for wrongdoing at the clinic reveal how the dramatic events were played out on both the public and legal battlefields and examine the personal histories motivations and actions of the major players the physicians the whistle blowers the claimants the lawyers the various investigatory committees the overzealous media and UCI administrators *Stealing Dreams* provides an absorbing evenhanded look at the evolution of the fertility clinic scandal and illuminates the complex ethical medical and legal issues surrounding the largely unregulated field of reproductive medicine *Making Babies: Biomedical Technologies, Reproductive Ethics, and Public Policy* Inmaculada de Melo-Martín, 2013-03-09 Each year roughly a million new cases of cancer appear in the US and more than 500 000 Americans die annually of premature death Although medical progress has slowed cancer mortality its incidence is increasing roughly six times faster than cancer mortality is decreasing Breast cancer in particular has been increasing about one percent each year since 1973 At least two of the factors responsible for this surge in breast cancer are women's use of medically prescribed synthetic hormones and the exposure of the entire population to chemicals such as dioxin Both exposures increase the likelihood of breast cancer Although many ethicists worry about involuntary societal imposition of chemicals such as dioxin through industrial and agricultural processes allegedly voluntary exposures also constitute both a public health problem and a biomedical ethics difficulty Physicians recommend synthetic hormones for example to women who apparently take them voluntarily In the case of in vitro fertilization doctors prescribe hormones to induce egg production and to increase the chances of reproduction for couples who are unable to have children Despite the benefits of medical technologies such as hormone stimulation and in vitro fertilization they also carry great risks The price that childless women pay for their opportunity to have children through in vitro fertilization may be their own increased risk of diseases such as breast cancer that are hormone dependent IVF and Assisted Reproduction Sarah Ferber, Nicola J. Marks, Vera Mackie, 2020-12-17 This is the first transnational history of IVF and assisted reproduction It is a key text for scholars and students in social science history science and technology studies STS cultural studies and gender and sexuality studies and a resource for journalists policymakers and anyone interested in assisted reproduction IVF was seen as revolutionary in 1978 when the first two IVF babies were born in the UK and India Assisted reproduction has now contributed to the birth of around ten million people The book traces the work of IVF teams as

they developed new techniques and laid the foundations of a multi billion dollar industry It analyses the changing definitions and experience of infertility the markets for eggs and children through surrogacy cross border reproductive treatment and the impact of regulation Using interviews with leading IVF figures archives media reports and the latest science it is a vital addition to the field of reproduction studies This pathbreaking account of the global forces behind the rapid rise of the fertility industry is the first to offer such a truly comprehensive overview of this hugely important topic Sarah Franklin Chair of Sociology University of Cambridge In this compelling overview of one of the most significant technological and social interventions ever developed the cultural and scientific imaginaries of assisted reproduction meet the obdurate histories of laboratory experiments biological materials and personal quests It is an indispensable read for anyone interested in IVF and assisted reproduction Andrea Whittaker Professor of Anthropology Monash University

In the Shadow of Progress Eric Cohen, 2008-07-15 We live in an age of unprecedented human mastery over birth and death body and mind nature and human nature In every realm of life science and technology have brought remarkable advances and improvements we are healthier wealthier and more comfortable than ever before But our gratitude for the benefits of progress increasingly mixes with concern about the meaning and consequences of our newfound powers If we can dream about a new age of genetic medicine we can also shudder at a new age of weapons of mass destruction As we welcome longer lives we wonder if we will still value human life as we should In the Shadow of Progress Being Human in the Age of Technology is a deep and lively reflection on the moral challenges of the technological age Eric Cohen a leading voice in America's bioethics debates offers a tour of the complex dilemmas at the intersection of science and morality moving seamlessly from contemporary subjects like stem cells and evolution to classic texts like the Hebrew Bible and Francis Bacon's New Atlantis Why are the wealthiest people in human history the least likely to want children What kind of civilization will we become if we seek cures for the sick by destroying human embryos What is lost when we relieve human sadness by altering the chemical balance of the brain or enhance human performance by altering the biological workings of the body In this age of scientific wonders have we forgotten what sets human beings apart from everything else in the natural world Can the fruits of modern science ever satisfy our deepest longings for love for virtue and for transcendence In the end Cohen argues there are no easy answers Our challenge is to live simultaneously with gratitude and fear pride and shame sobriety and hope in this new age of technology

Technologies of Procreation Jeanette Edwards, 1993 An anthropology research team drawn from four British universities explores how assisted conception techniques create the potential for a redefinition of relationships because it is now possible to create life on behalf of another person They draw data and ideas from ethnographic studies household interviews and debates in Parliament and among clinicians Distributed by St Martin's Press Annotation copyright by Book News Inc Portland OR

Embryo Politics Thomas Banchoff, 2011-05-15 Since the first fertilization of a human egg in the laboratory in 1968 scientific and technological breakthroughs have raised ethical dilemmas and generated policy controversies on both sides of

the Atlantic Embryo stem cell and cloning research have provoked impassioned political debate about their religious moral legal and practical implications National governments make rules that govern the creation destruction and use of embryos in the laboratory but they do so in profoundly different ways In *Embryo Politics* Thomas Banchoff provides a comprehensive overview of political struggles about embryo research during four decades in four countries the United States the United Kingdom Germany and France Banchoff's book the first of its kind demonstrates the impact of particular national histories and institutions on very different patterns of national governance Over time he argues partisan debate and religious secular polarization have come to overshadow ethical reflection and political deliberation on the moral status of the embryo and the promise of biomedical research Only by recovering a robust and public ethical debate will we be able to govern revolutionary life science technologies effectively and responsibly into the future

A Short History of Medical Ethics Albert R. Jonsen, 2000 A physician says I have an ethical obligation never to cause the death of a patient another responds My ethical obligation is to relieve pain even if the patient dies The current argument over the role of physicians in assisting patients to die constantly refers to the ethical duties of the profession References to the Hippocratic Oath are often heard Many modern problems from assisted suicide to accessible health care raise questions about the traditional ethics of medicine and the medical profession However few know what the traditional ethics are and how they came into being This book provides a brief tour of the

complex story of medical ethics evolved over centuries in both Western and Eastern culture It sets this story in the social and cultural contexts in which the work of healing was practiced and suggests that behind the many different perceptions about the ethical duties of physicians certain themes appear constantly and may be relevant to modern debates The book begins with the Hippocratic medicine of ancient Greece moves through the Middle Ages Renaissance and Enlightenment in Europe and the long history of Indian 7nd Chinese medicine ending as the problems raised modern medical science and technology challenge the settled ethics of the long tradition The Pursuit of Parenthood Margaret Marsh,Wanda Ronner,2019-08-06 A wide ranging history of assisted reproductive technologies and their ethical implications Finalist of the PROSE Award for Best Book in History of Science Medicine and Technology by the Association of American Publishers Since the 1978 birth of the first IVF baby Louise Brown in England more than eight million children have been born with the help of assisted reproductive technologies From the start they have stirred controversy and raised profound questions Should there be limits to the lengths to which people can go to make their idea of family a reality Who should pay for treatment How can we ensure the ethical use of these technologies And what can be done to address the racial and economic disparities in access to care that enable some to have children while others go without In The Pursuit of Parenthood historian Margaret Marsh and gynecologist Wanda Ronner seek to answer these challenging questions Bringing their unique expertise in gender history and women s health to the subject Marsh and Ronner examine the unprecedented means liberating for some and deeply unsettling for others by which families can now be created Beginning with the early efforts to create embryos outside a woman s body and ending with such new developments as mitochondrial replacement techniques and uterus transplants the authors assess the impact of contemporary reproductive technology in the United States In this volume we meet the scientists and physicians who have developed these technologies and the women and men who have used them Along the way the book dispels a number of fertility myths offers policy recommendations that are intended to bring clarity and judgment to this complicated medical history and reveals why the United States is still known as the Wild West of reproductive medicine

The making of British bioethics Duncan Wilson, 2015-11-01 This electronic version has been made available under a Creative Commons BY NC ND open access license *The making of British bioethics* provides the first in depth study of how philosophers lawyers and other outsiders came to play a major role in discussing and helping to regulate issues that used to be left to doctors and scientists It details how British bioethics emerged thanks to a dynamic interplay between sociopolitical concerns and the aims of specific professional groups and individuals who helped create the demand for outside involvement and transformed themselves into influential ethics experts Highlighting this interplay helps us appreciate how issues such as embryo research and assisted dying became high profile bioethical concerns in the late twentieth century and why different groups now play a critical role in developing regulatory standards and leading public debates The book draws on a wide range of original sources and will be of interest to historians
