Scott Henderson,2011-08-08 Since its inception in 1968 the brain death criterion for human death has enjoyed the status of one of the few relatively well settled issues in bioethics However over the last fifteen years or so a growing

number of experts in medicine philosophy and religion have come to regard brain death as an untenable criterion for the determination of death Given that the debate about brain death has occupied a relatively small group of professionals few are aware that brain death fails to correspond to any coherent biological or philosophical conception of death This is significant for if the brain dead are not dead then the removal of their vital organs for transplantation is the direct cause of their deaths and a violation of the Dead Donor Rule This unique monograph synthesizes the social legal medical religious and philosophical problems inherent in current social policy allowing for organ donation under the brain death criterion In so doing this bioethical appraisal offers a provocative investigation of the ethical quandaries inherent in the way transplantable organs are currently procured Drawing together these multidisciplinary threads this book advocates the abandonment of the brain death criterion in light of its adverse failures and concludes by laying the groundwork for a new policy of death in an effort to further the good of organ donation and transplantation

Dealing with Bioethical Issues in a Globalized World Joris Gielen, 2020-01-09 This book addresses the complexity of talking about normativity in bioethics within the context of contemporary multicultural and multi religious society It offers original contributions by specialists in bioethics exploring new ways of understanding normativity in bioethics In bioethical publications and debates the concept of normativity is often used without consideration of the difficulties surrounding it whereas there are many competing claims for normativity within bioethics Examples of such competing normative bioethical discourses can be perceived in variations and differences in bioethical arguments within individual religions and the opposition between bioethical arguments from specific religions and arguments from bioethicists who do not claim religious allegiance We also cannot merely assume that a Western understanding of normative bioethics will be unproblematic in bioethics in non

Western cultures and religions Through an analysis of normativity in Christian Hindu Buddhist Islamic and Jewish bioethics the book creates awareness of the complexity of normativity in bioethics The book also covers normative bioethics outside an explicitly religiously committed context and specific attention is paid to bioethics as an interdisciplinary endeavor It reveals how normativity relates to empirical and global bioethics which challenges it faces in bioethics in secular pluralistic society and how to overcome these By doing that this book fills an important gap in bioethics literature
