Natural Language Parsing David R. Dowty, Lauri Karttunen, Arnold M. Zwicky, 2005-11-24 This is a collection of new papers by leading researchers on natural language parsing In the past the problem of how people parse the sentences they hear determine the identity of the words in these sentences and group these words into larger units has been addressed in very different ways by experimental psychologists by theoretical linguists and by researchers in artificial intelligence with little apparent relationship among the solutions proposed by each group However because of important advances in all these disciplines research on parsing in each of these fields now seems to have something significant to contribute to the others as this volume demonstrates The volume includes some papers applying the results of experimental psychological studies of parsing to linguistic theory others which present computational models of parsing and a mathematical linguistics paper on tree adjoining grammars and parsing *Theoretical Issues in Natural Language Processing* Yorick Wilks, 2018-10-24 Accompanying continued industrial production and sales of artificial intelligence and expert systems is the risk that difficult and resistant theoretical problems and issues will be ignored The participants at the Third Tinlap Workshop whose contributions are contained in *Theoretical Issues in Natural Language Processing* remove that risk They discuss and promote theoretical research on natural language processing examinations of solutions to current problems development of new theories and representations of published literature on the subject Discussions among these theoreticians in artificial intelligence logic psychology philosophy and linguistics draw a comprehensive up to date picture of the natural language processing field **Framework and Resources for Natural Language Parser Evaluation** Tuomo Kakkonen, 2007

Connectionist Natural Language Processing Noel Sharkey, 2012-12-06 Connection science is a new information processing paradigm which attempts to imitate the architecture and process of the brain and brings together researchers from disciplines as diverse as computer science physics psychology philosophy linguistics biology engineering neuroscience and AI Work in Connectionist Natural Language Processing CNLP is now expanding rapidly yet much of the work is still only available in journals some of them quite obscure To make this research more accessible this book brings together an important and comprehensive set of articles from the journal CONNECTION SCIENCE which represent the state of the art in Connectionist natural language processing from speech recognition to discourse comprehension While it is quintessentially Connectionist it also deals with hybrid systems and will be of interest to both theoreticians as well as computer modellers Range of topics covered Connectionism and Cognitive Linguistics Motion Chomsky's Government binding Theory Syntactic Transformations on Distributed Representations Syntactic Neural Networks A Hybrid Symbolic Connectionist Model for Understanding of Nouns Connectionism and Determinism in a Syntactic Parser Context Free Grammar Recognition Script Recognition with Hierarchical Feature Maps Attention Mechanisms in Language Script Based Story Processing A

Morgan, Katherine Demuth, 2014-01-14

In the beginning before there are words or syntax or discourse there is speech Speech is an infant's gateway to language Without exposure to speech no language or at most only a feeble facsimile of language develops regardless of how rich a child's biological endowment for language learning may be But little is given directly in speech not words for example as anyone who has ever listened to fluent conversation in an unfamiliar language can attest Rather words and phrases or rudimentary categories or whatever other information is required for syntactic and semantic analyses to begin operating must be pulled from speech through an infant's developing perceptual capacities By the end of the first year an infant can segment at least some words from fluent speech Beyond this how impoverished or rich an infant's representations of input may be remains largely unknown Clearly in the debate over determinants of early language acquisition the input speech stream has too often been offhandedly dismissed as a potential source of information This volume brings together internationally known scholars from a range of disciplines linguistics psychology cognitive and computer science and acoustics who share common interests in how speech in its phonological prosodic distributional and statistical properties may encode information useful for early language learning and how such information may be deciphered by very young children These scholars offer a spectrum of viewpoints on the possibility that aspects of speech may provide bootstraps for language learning contribute important state of the art findings across a variety of relevant domains and illuminate critical directions for future inquiry The publication of this volume represents a significant step in renewing the bonds between two fields that have long been sundered speech perception and language acquisition **An**

Invitation to Cognitive Science: Language Daniel N. Osherson, Lila R. Gleitman, 1995 This text part of a set that offers selected examples of issues and theories from many subfields of cognitive science focuses on language It employs a case study approach presenting research topics in some depth and relying on suggested readings to convey the breadth of views and results **Research Methods in Linguistics** Robert J. Podesva, Devyani Sharma, 2014-01-23 A comprehensive guide to conducting research projects in linguistics this book provides a complete training in state of the art data collection processing and analysis techniques The book follows the structure of a research project guiding the reader through the steps involved in collecting and processing data and providing a solid foundation for linguistic analysis All major research methods are covered each by a leading expert Rather than focusing on narrow specializations the text fosters interdisciplinarity with many chapters focusing on shared methods such as sampling experimental design transcription and constructing an argument Highly practical the book offers helpful tips on how and where to get started depending on the nature of the research question The only book that covers the full range of methods used across the field this student friendly text is also a

Packard, 2010-11-05 This book is the first collection of studies on an important yet under investigated linguistic phenomenon the processing and production of head final syntactic structures Until now the remarkable progress made in the field of human sentence processing had been achieved largely by investigating head initial languages such as English The goal of the present volume is to deepen our understanding by examining head final languages and offering a comparison of those results to findings from head initial languages This book brings together cross linguistic investigations of languages with prominent head final structures such as Basque Chinese German Japanese Korean and Hindi It will inform readers of linguistics with both theoretical and experimental backgrounds as it provides accounts of previous studies offers experimentally based theoretical discussions and includes experimental stimuli in the original languages The Routledge Linguistics Encyclopedia Kirsten Malmkjaer, 2009-12-04 The Routledge Linguistics Encyclopedia is a single volume encyclopedia covering all major and subsidiary areas of linguistics and applied linguistics The 79 entries provide in depth coverage of the topics and sub topics of the field Entries are alphabetically arranged and extensively cross referenced so the reader can see how areas interrelate Including a substantial introduction which provides a potted history of linguistics and suggestions for further reading this is an indispensable reference tool for specialists and non specialists alike This third edition has been thoroughly revised and updated with new entries on attitudes to language conversation analysis English Language Teaching gesture and language idioms language and advertising language and new technologies linguistics in schools optimality theory research methods in linguistics slang The following entries have been recommissioned or substantially revised Animals and Language Artificial Languages Computational Linguistics to Language Engineering Contrastive Analysis Contrastive Linguistics Corpus Linguistics Critical Discourse Analysis Dialectology Discourse Analysis Dyslexia Genre Analysis Historical Linguistics Intonation Language and Education Language Gender and Sexuality Language Origins Language Surveys Language Universals Linguistic Typology Metaphor Pragmatics Rhetoric Semantics Semiotics Sociolinguistics Stylistics Systemic Functional Grammar Writing Systems

Text-based intelligent Systems Paul S. Jacobs, 2014-02-25 The symposium on which this volume was based brought together approximately fifty scientists from a variety of backgrounds to discuss the rapidly emerging set of competing technologies for exploiting a massive quantity of textual information This group was challenged to explore new ways to take advantage of the power of on line text A billion words of text can be more generally useful than a few hundred logical rules if advanced computation can extract useful information from streams of text and help find what is needed in the sea of available material While the extraction task is a hot topic for the field of natural language processing and the retrieval task is a solid aspect in the field of information retrieval these two disciplines came together at the symposium and have been cross breeding more than ever The book is organized in three parts The first group of papers describes the current set of natural

language processing techniques used for interpreting and extracting information from quantities of text The second group gives some of the historical perspective methodology and current practice of information retrieval work the third covers both current and emerging applications of these techniques This collection of readings should give students and scientists alike a good idea of the current techniques as well as a general concept of how to go about developing and testing systems to handle volumes of text

Japanese Sentence Processing Reiko Mazuka, Noriko Nagai, 2013-05-13 This volume is a direct result of the International Symposium on Japanese Sentence Processing held at Duke University The symposium provided the first opportunity for researchers in three disciplinary areas from both Japan and the United States to participate in a conference where they could discuss issues concerning Japanese syntactic processing The goals of the symposium were three fold to illuminate the mechanisms of Japanese sentence processing from the viewpoints of linguistics psycholinguistics and computer science to synthesize findings about the mechanisms of Japanese sentence processing by researchers in these three fields in Japan and the United States to lay foundations for future interdisciplinary research in Japanese sentence processing as well as international collaborations between researchers in Japan and the United States The chapters in this volume have been written from the points of view of three different disciplines with various immediate objectives from building usable speech understanding systems to investigating the nature of competence grammars for natural languages All of the papers share the long term goal of understanding the nature of human language processing mechanisms The book is concerned with two central issues the universality of language processing mechanisms and the nature of the relation between the components of linguistic knowledge and language processing This volume demonstrates that interdisciplinary research can be fruitful and provides groundwork for further research in Japanese sentence processing

Innovative Investigations of Language in Autism Spectrum Disorder Letitia Naigles, 2016-11-07 In recent decades a growing number of children have been diagnosed with autism spectrum disorder ASD a condition characterized by among other features social interaction deficits and language impairment Yet the precise nature of the disorder's impact on language development is not well understood in part because of the language variability among children across the autism spectrum The contributors to this volume experts in fields ranging from communication disorders to developmental and clinical psychology to linguistics use innovative techniques to address two broad questions Is the variability of language development and use in children with ASD a function of the language such that some linguistic domains are more vulnerable to ASD than others Or is the variability a function of the individual such that some characteristics predispose those with ASD to have varying levels of difficulty with language development and use Contributors investigate these questions across linguistic levels from lexical semantics and single clause syntax to computationally complex phonology and the syntax pragmatics interface Authors address both spoken and written domains within the wider context of language acquisition This timely and broadly accessible volume will be of interest to a broad range of specialists including linguists psychologists sociologists
