looking to harness the power of language generation technologies *Empirical Methods in Natural Language Generation*
Emiel Krahmer, Mariet Theune, 2010-09-09 Natural language generation NLG is a subfield of natural language processing
NLP that is often characterized as the study of automatically converting non linguistic representations e g from databases or
other knowledge sources into coherent natural language text In recent years the field has evolved substantially Perhaps the
most important new development is the current emphasis on data oriented methods and empirical evaluation Progress in
related areas such as machine translation dialogue system design and automatic text summarization and the resulting
awareness of the importance of language generation the increasing availability of suitable corpora in recent years and the
organization of shared tasks for NLG where different teams of researchers develop and evaluate their algorithms on a shared
held out data set have had a considerable impact on the field and this book offers the first comprehensive overview of recent
empirically oriented NLG research
