## **Naturalistic Epistemology A Symposium Of Two Decades:**

**Naturalistic Epistemology** A. Shimony, Debra Nails, 1987-03-31 1 AIMS OF THE INTRODUCTION The systematic assessment of claims to knowledge is the central task of epistemology According to naturalistic epistemologists this task cannot be well performed unless proper attention is paid to the place of the knowing subject in nature All philosophers who can appropriately be called naturalistic epistemologists subscribe to two theses a human beings including their cognitive faculties are entities in nature interacting with other entities studied by the natural sciences and b the results of natural scientific investigations of human beings particularly of biology and empirical psychology are relevant and probably crucial to the epistemological enterprise Naturalistic epistemologists differ in their explications of theses a and b and also in their conceptions of the proper admixture of other components needed for an adequate treatment of human knowledge e g linguistic analysis logic decision theory and theory of value Those contributors to this volume who consider themselves to be naturalistic epistemologists the majority differ greatly in these respects It is not my intention in this introduction to give a taxonomy of naturalistic epistemologies I intend only to provide an overview which will stimulate a critical reading of the articles in the body of this volume by facilitating a recognition of the authors assumptions emphases and omissions *The Philosophy of Psychology* William O'Donohue, Richard F Kitchener, 1996-10-28 This major text provides the first comprehensive anthology of the key topics arising in the philosophy of psychology Bringing together internationally renowned authors including Herb Simon Karl Pribram Joseph Rychlak Ullin T Place and Adolf Grünbaum this volume offers a stimulating and informative addition to contemporary debate With the cognitive revolution of the 1960s there has been a resurgence of interest in the study of the philosophical assumptions and implications of psychology Several significant themes such as the foundations of knowledge behaviourism rationality emotion and cognitive science span both philosophy and psychology and are covered here along with a wide range of issues in the fields **The Search for a Naturalistic World View: Volume 1** Abner Shimony, 1993-02-26 This two volume 1993 collection of his essays written over a period of forty years explores the interrelations between science and philosophy **E.A. Burtt, Historian and Philosopher** D. Villemaire, 2013-04-17 Burtt's book *The Metaphysical Foundations of Modern Physical Science* is something of a puzzle within the context of twentieth century intellectual history especially American intellectual history Burtt's pioneering study of the scientific revolution has proved to be prophetic in its rejection of both scientism and positivism Published in 1924 Burtt's book continues to be read in educated circles and remains both the rose and the thorn on university reading lists raising skeptical questions about science methods and science knowledge just as it did seventy five years ago This book examines Burtt's public academic and personal life From his politics of conscience after World War I on through the Cold War Burtt is shown to be a man of unparalleled integrity whose relentless search for philosophic understanding drove his more quixotic philosophical quests and steered his personal life including its tragic dimension toward simple virtue The many who have

been affected by The Metaphysical Foundations will be especially interested in this new perspective on the life and thought of its author Those who have not read Burtt's books might be inspired to study this unusual American thinker

Evolutionary Epistemology W. Callebaut, R. Pinxten, 2012-12-06 This volume has its already distant origin in an international conference on Evolutionary Epistemology the editors organized at the University of Ghent in November 1984 This conference aimed to follow up the endeavor started at the ERISS Epistemologically Relevant Internalist Sociology of Science conference organized by Don Campbell and Alex Rosenberg at Cazenovia Lake New York in June 1981 whilst injecting the gist of certain current continental intellectual developments into a debate whose focus we thought was in danger of being narrowed too much considering the still underdeveloped state of affairs in the field Broadly speaking evolutionary epistemology today consists of two interrelated yet qualitatively distinct investigative efforts Both are drawing on Darwinian concepts which may explain why many people have failed to discriminate them One is the study of the evolution of the cognitive apparatus of living organisms which is first and foremost the province of biologists and psychologists H C Plotkin *Ed Learning Development and Culture Essays in Evolutionary Epistemology* New York Wiley 1984 although quite a few philosophers professional or vocational have also felt the need to express themselves on this vast subject F M Wuketits *Ed Concepts and Approaches in Evolutionary Epistemology* Dordrecht Boston Reidel 1984 The other approach deals with the evolution of science and has been dominated hitherto by allegedly naturalized philosophers no book length survey of this literature is available at present Knowledge, Language and Logic: Questions for Quine A. Orenstein, P.

Kotatko, 2012-12-06 Quine is one of the twentieth century's most important and influential philosophers The essays in this collection are by some of the leading figures in their fields and they touch on the most recent turnings in Quine's work The book also features an essay by Quine himself and his replies to each of the papers Questions are raised concerning Quine's views on knowledge observation holism truth naturalized epistemology about language meaning the indeterminacy of translation conjecture and about the philosophy of logic ontology singular terms vagueness identity and intensional contexts Given Quine's preeminent position this book must be of interest to students of philosophy in general Quine aficionados and most particularly to those working in the areas of epistemology ontology philosophies of language of logic and of science

**Nietzsche, Theories of Knowledge, and Critical Theory** Babette Babich, Robert S. Cohen, 1999-08-31 Nietzsche Theories of Knowledge and Critical Theory the first volume of a two volume book collection on Nietzsche and the Sciences ranges from reviews of Nietzsche and the wide variety of epistemic traditions not only pre Socratic but Cartesian Leibnizian Kantian and post Kantian through essays on Nietzsche's critique of knowledge via his critique of grammar and modern culture and culminates in an extended section on the dynamic of Nietzsche's critical philosophy seen from the perspective of Habermas and critical theory This volume features a first time English translation of Habermas's afterword to his own German language collection of Nietzsche's Epistemological Writings **Hermeneutics and Science** Márta Fehér, O. Kiss, L.

Ropolyi,2013-04-17 Hermeneutics was elaborated as a specific art of understanding in humanities The discovered paradigmatic historical characteristics of scientific knowledge and the role of rhetoric interpretation and contextuality enabled us to use similar arguments in natural sciences too In this way a new research field the hermeneutics of science emerged based upon the works of Husserl Merleau Ponty Heidegger and Gadamer A dialogue between philosophers and scientists begins in this volume on hermeneutic approaches to physics biology ethology mathematics and cognitive science Scientific principles methodologies discourse language and metaphors are analyzed as well as the role of the lay public and the legitimation of science Different hermeneutical phenomenological approaches to perception experiments methods discovery and justification and the genesis of science are presented Hermeneutics shed a new light on the incommensurability of paradigms the possibility of translation and the historical understanding of science

*Incommensurability and Related Matters* Paul Hoyningen-Huene,H. Sankey,2013-04-17 Incommensurability and Related Matters draws together some of the most distinguished contributors to the critical literature on the problem of the incommensurability of scientific theories It addresses all the various problems raised by the problem of incommensurability such as meaning change reference of theoretical terms scientific realism and anti realism rationality of theory choice cognitive aspects of conceptual change as well as exploring the broader implications of incommensurability for cultural difference While it offers new work and new directions of discussion on the topic of incommensurability the book also recapitulates the history of the discussion of the topic that has taken place within the literature on incommensurability

**The Evolutionary Biology Papers of Elie Metchnikoff** H. Gourko,D. Williamson,A.I. Tauber,2013-04-17 Elie Metchnikoff 1845 1916 winner of the Nobel Prize in 1907 for his contributions to immunology was first a comparative zoologist who working in the wake of Darwin s *On the Origin of Species* made seminal contributions to evolutionary biology His work in comparative embryology is best known in regard to the debates with Ernst Haeckel concerning animal genealogical relationships and the theoretical origins of metazoans But independent of those polemics Metchnikoff developed his phagocytosis theory of immunity as a result of his early comparative embryology research and only in examining the full breadth of his work do we appreciate his signal originality Metchnikoff s scientific papers have remained largely untranslated into English Assembled here annotated and edited are the key evolutionary biology papers dating from Metchnikoff s earliest writings 1865 to the texts of his mature period of the 1890s which will serve as an invaluable resource for those interested in the historical development of evolutionary biology
