Nature and Scientific Method Daniel O. Dahlstrom, Daniel O. Dahlstrom, 2018-03-02 The present volume is a collection of systematic and historical studies addressing the terms of Aristotelian inference **Aquinas and Us (Volume 18)** Timothy Kearns, Gyula Klima, Alex Hall, 2022-10-06 This volume considers the contemporary relevance of Aquinas thought and what parameters should influence its reception It discusses the reception of Aquinas on creation ex nihilo and offers guidelines for reception in the fields of metaphysics and natural theology Chapters on physics and philosophy of mind intersect with key modern debates Contributions interpret Aquinas physics in light of contemporary findings and discuss his account of human self awareness **God and Reason in the Middle Ages** Edward Grant, 2001-07-30 Between 1100 and 1600 the emphasis on reason in the learning and intellectual life of Western Europe became more pervasive and widespread than ever before in the history of human civilization Of crucial significance was the invention of the university around 1200 within which reason was institutionalized and where it became a deeply embedded permanent feature of Western thought and culture It is therefore appropriate to speak of an Age of Reason in the Middle Ages and to view it as a forerunner and herald of the Age of Reason that was to come in the seventeenth century The object of this study is twofold to describe how reason was manifested in the curriculum of medieval universities especially in the subjects of logic natural philosophy and theology and to explain how the Middle Ages acquired an undeserved reputation as an age of superstition barbarism and unreason

Discipline and Experience Peter Dear, 2009-05-13 Although the Scientific Revolution has long been regarded as the beginning of modern science there has been little consensus about its true character While the application of mathematics to the study of the natural world has always been recognized as an important factor the role of experiment has been less clearly understood Peter Dear investigates the nature of the change that occurred during this period focusing particular attention on evolving notions of experience and how these developed into the experimental work that is at the center of modern science He examines seventeenth century mathematical sciences astronomy optics and mechanics not as abstract ideas but as vital enterprises that involved practices related to both experience and experiment Dear illuminates how mathematicians and natural philosophers of the period Mersenne Descartes Pascal Barrow Newton Boyle and the Jesuits used experience in their argumentation and how and why these approaches changed over the course of a century Drawing on mathematical texts and works of natural philosophy from all over Europe he describes a process of change that was gradual halting sometimes contradictory far from the sharp break with intellectual tradition implied by the term revolution **Natural Kinds, Laws of Nature and Scientific Methodology** Peter J. Riggs, 2013-03-09 Australia and New Zealand boast an active community of scholars working in the field of history philosophy and social studies of science Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for their work Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area In each

volume a majority of the contributors is from Australia or New Zealand Contributions from elsewhere are by no means ruled out however and are indeed actively encouraged wherever appropriate to the balance of the volume in question Earlier volumes in the series have been welcomed for significantly advancing the discussion of the topics they have dealt with The present volume will I believe be greeted equally enthusiastically by readers in many parts of the world R W Home General Editor Australasian Studies in History and Philosophy of Science VII ACKNOWLEDGEMENTS The stimulus to assemble this collection of essays grew from a number of interesting seminars conducted during the academic years 1991-92 under the auspices of the Victorian Centre for the History and Philosophy of Science which is centred at the Bundoora campus of La Trobe University in the outer suburbs of Melbourne Some of the seminar presentations to the Victorian Centre for HPS and other articles awaiting publication have been made available as part of the Pre print Series of the Victorian Centre

Kant's Theory of Natural Science Peter Plaass, 2012-12-06 Plaass's treatise stood at the beginning of a renewed wave of scholarship regarding Kant's Metaphysical Foundations of Natural Science MF Plaass argues that the MF represents an integral step in Kant's development between the two editions of the Critique of Pure Reason The MF repeats the Copernican turn using the conditions of subjectivity to derive the metaphysical determinations of matter as the object of natural science with the new method called metaphysical construction which simultaneously grounds the mathematizability of physics The translators provide background and analysis of Plaass's work extend it to include the body of the MF and offer a variation on the analysis of the relationship between mathematics and metaphysics in the MF They discuss its relevance for contemporary paradigm dependency approaches to the philosophy of science and for philosophical hermeneutics The book will be of interest to Kant specialists as well as to students of the philosophy of science in general

Scientific Realism and the Rationality of Science Professor Howard Sankey, 2012-10-01 Scientific realism is the position that the aim of science is to advance on truth and increase knowledge about observable and unobservable aspects of the mind independent world which we inhabit This book articulates and defends that position In presenting a clear formulation and addressing the major arguments for scientific realism Sankey appeals to philosophers beyond the community of typically Anglo American analytic philosophers of science to appreciate and understand the doctrine The book emphasizes the epistemological aspects of scientific realism and contains an original solution to the problem of induction that rests on an appeal to the principle of uniformity of nature

Theory, Evidence, Data: Themes from George E. Smith Marius Stan, Christopher Smeenk, 2023-11-27 This book builds on the path breaking work of George E Smith and further explores the notions of evidence and confirmation in the exact sciences from two perspectives conceptual and historical Contributions in this volume investigate the philosophical presuppositions explanatory scope and historical precursors of evidence in mathematical physics and related disciplines The papers are written by and of interest to philosophers and historians of science
