Nature By Design People Natural Process And Ecological Restoration:

Nature by Design Eric Higgs, 2003-04-25 Ecological restoration is the process of repairing human damage to ecosystems. It involves reintroducing missing plants and animals, rebuilding soils, eliminating hazardous substances, ripping up roads, and returning natural processes such as fire and flooding to places that thrive on their regular occurrence. Thousands of restoration projects take place in North America every year. In *Nature by Design*, Eric Higgs argues that profound philosophical and cultural shifts accompany these projects. He explores the ethical and philosophical bases of restoration and the question of what constitutes good ecological restoration. Higgs explains how and why the restoration movement came about, where it fits into the array of approaches to human relationships with the land, and how it might be used to secure a sustainable future. Some environmental philosophers and activists worry that restoration will dilute preservation and conservation efforts and lead to an even deeper technological attitude toward nature. They ask whether even well-conceived restoration projects are in fact just expressions of human will. Higgs prefaces his responses to such concerns by distinguishing among several types of ecological restoration. He also describes a growing gulf between professionals and amateurs. Higgs finds much merit in criticism about technological restoration projects which can cause more damage than they undo. These projects often ignore the fact that changing one thing in a complex system can change the whole system. For restoration projects to be successful, Higgs argues, people at the community level must be engaged. These focal restorations bring communities together, helping volunteers develop a dedication to place and encouraging democracy.

Restoration of Ecosystems - Bridging Nature and Humans Stefan Zerbe, 2023-02-13 In this interdisciplinary textbook, which bridges the gap between the natural and social sciences, both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented. The diversity of land use types with a focus on Central Europe is highlighted, and case studies of practical restoration projects are presented. The textbook offers students who deal with the environment, as well as scientists and practitioners, a profound and up-to-date but also critical overview of the state of knowledge. This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes. In further chapters, marine ecosystems and their restoration, as well as development potentials and the limits of restoration, are discussed in more detail. The ecological fundamentals are expanded through an interdisciplinary perspective, taking into account environmental ethics, sociology, anthropology, and economics. In addition to an up-to-date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration, the textbook provides a valuable basis for studies, science, and practice. The students also receive assistance in searching for literature and critical fact analysis, and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology.

Intelligent Tinkering Robert Jonathan Cabin, 2011-08-03 Robert J. Cabin uses the restoration of tropical dry forestland in Hawaii as an in-depth case study to investigate the scientific, practical, and philosophical issues associated with performing ecological

restoration in the messy real world Interweaving entertaining narratives of his own on the ground experiences as a practicing restorationist with reflections about his scientific training and background Cabin explores the relationship between science and practice in ecological restoration He observes that because restoration can be complex and value driven its implementation often turns out to be as much interdisciplinary art as hard science Despite the often distinct cultures and methodologies of scientists and practitioners Cabin shows how each has a vital role in effective restoration and offers suggestions for improving working relationships One approach he advocates is what he calls intelligent tinkering after the work of Aldo Leopold In this model practitioners employ the same kind of careful but informal trial and error strategy followed by such groups as indigenous peoples and hobbyist mechanics Cabin illustrates the power of intelligent tinkering using examples from his own work and other restoration projects The gap between science and practice is not unique to ecological restoration it is a widespread problem across all fields of applied science Written in a clear and engaging style Intelligent Tinkering offers an insightful look at the underlying causes of the problem along with invaluable suggestions for addressing it

Beyond Naturalness David N. Cole, Laurie Yung, 2012-06-22 The central concept guiding the management of parks and wilderness over the past century has been naturalness to a large extent the explicit purpose in establishing these special areas was to keep them in their natural state But what does that mean particularly as the effects of stressors such as habitat fragmentation altered disturbance regimes pollution invasive species and climate change become both more pronounced and more pervasive Beyond Naturalness brings together leading scientists and policymakers to explore the concept of naturalness its varied meanings and the extent to which it provides adequate guidance regarding where when and how managers should intervene in ecosystem processes to protect park and wilderness values The main conclusion is the idea that naturalness will continue to provide an important touchstone for protected area conservation but that more specific goals and objectives are needed to guide stewardship The issues considered in Beyond Naturalness are central not just to conservation of parks but to many areas of ecological thinking including the fields of conservation biology and ecological restoration and represent the cutting edge of discussions of both values and practice in the twenty first century This book offers excellent writing and focus along with remarkable clarity of thought on some of the difficult questions being raised in light of new and changing stressors such as global environmental climate change

Coral Reef Restoration Handbook William F. Precht, 2006-05-25 this book is the first to describe in detail the art and science of coral reef restoration It is to be hoped that the information that can be gleaned within the pages of this book will set a path towards continued preservation of this valuable underwater treasure to be used appreciated and experienced for future generations

Senator Beyond restoration ecology: social perspectives in Latin America and the Caribbean Eliane Ceccon & Daniel Roberto Pérez, 2017-09-05 This book invites us to reflect on the restoration of terrestrial ecosystems in the context of a region whose identity is still under construction Latin America and the Caribbean immersed in a social economic ecological and

political crisis whose roots originate historically and politically in colonialism and in the prevailing model of capital accumulation. For the first time insights and practical experiences on restoration are gathered from most Latin American and Caribbean countries. Furthermore, this book offers a social approach to restoration which will likely become preponderant in this field and in this region. The authors claim that a Latin American knowledge of restoration is under construction and that this discipline can be a significant tool to empower local populations which might in turn lead to a collective action of change. Case studies from 11 countries of the region were compiled involving multiple voices that emerge beyond generalist principles and with a bottom up approach. The main idea of the book is to open a debate about the identity of ecological and social restoration in this region. This book is targeted to restoration specialists, volunteers, environmental managers, researchers, politicians and NGOs working on the complexity of socioecological restoration in a region with unavoidable social problems. It is intended for people with similar concerns to those of the chapters' authors. This work tries to integrate a movement on the rise, almost silent, born with its own narratives of successes and failures that do not hinder its development. Finally, the determination and commitment of Latin American and Caribbean social actors to restore not only natural values but also social, ethical and cultural ones is remarkable.

Ecological Restoration and the U.S. Nature and Environmental Writing Tradition Laura Smith, 2022-01-12. This book presents a critical history of the intersections between American environmental literature and ecological restoration policy and practice. Through a storying, restorying, restoring framework, this book explores how entanglements between writers and places have produced literary interventions in restoration politics. The book considers the ways literary landscapes are politicized by writers themselves and by conservationists, activists, policymakers and others in defense of U.S. public lands and the idea of wilderness. The book profiles five environmental writers and examines how their writings on nature, wilderness, conservation, preservation and restoration have variously inspired and been translated into ecological restoration programs and campaigns by environmental organizations. The featured authors are Henry David Thoreau (1817-1862) at Walden Pond, John Muir (1838-1914) in Yosemite National Park, Aldo Leopold (1887-1948) at his family's Wisconsin sand farm, Marjory Stoneman Douglas (1890-1998) in the Everglades and Edward Abbey (1927-1989) in Glen Canyon. This book combines environmental history, literature, biography, philosophy and politics in a commentary on considering and developing environmental literature's place in conversations on restoration ecology, ecological restoration and rewilding.

Restoration Ecology Jelte van Andel, James Aronson, 2012-04-12. Enlarged, enhanced and internationalized edition of the first restoration ecology textbook to be published, with foreword by Dr. Steven Whisnant of Texas A M University and Chair of the Society of Ecological Restoration. Since 2006, when the first edition of this book appeared, major advances have taken place in restoration science and in the practice of ecological restoration. Both are now accepted as key components of the increasingly urgent search for sustainability at global, national and community levels; hence the phrase 'New Frontier' in the title. While the first edition focused on ecosystems and landscapes in Europe, this new

edition covers biomes and contexts all over the world Several new chapters deal with broad issues such as biological invasions climate change and agricultural land abandonment as they relate to restoration science and ecological restoration Case studies are included from Australia North America and the tropics This is an accessible textbook for senior undergraduate and graduate level students and early career scientists The book also provides a solid scientific background for managers volunteers and mid career professionals involved in the practice of ecological restoration Review of the first edition I suspect that this volume will find its way onto the shelves of many restoration researchers and practitioners and will be used as a key text in graduate courses where it will help fill a large void My own copy is already heavily bookmarked and will be a constant source of research ideas and lecture material Environmental Conservation Companion Website A companion website with downloadable figures is available at www.wiley.com/go/vanandel/restorationecology

Environmental Ethics Marion Hourdequin, 2024-01-25 What is environmental virtue Is developing good habits enough What does climate justice require Is ecological restoration just another form of the human domination of nature Exploring these questions and more this book provides an up to date and balanced introduction to environmental ethics It first examines ethical theory then ties theory to practice showing how values guide environmental policies but also how policies and institutions shape environmental values Updated and expanded to engage with the latest scholarship scientific findings and societal challenges this 2nd edition features New sections on food ethics multispecies justice intergenerational ethics and the Anthropocene Contemporary case studies focusing on the rights of nature the use of biotechnology in ecological restoration and just climate transitions Expanded coverage of diverse philosophical traditions including Confucian Daoist and Indigenous ethical perspectives Updated discussion questions further reading sections and online resources Exploring the possibilities and limitations inherent in both classical ethical models and modern theoretical approaches to the environment this is a key resource for teaching students to think ethically about the world we live in [The Spirit of Sustainability](#) Willis Jenkins, Whitney Bauman, 2009-11-01 The Spirit of Sustainability helps readers navigate the moral worlds and ethical concepts and social and religious practices related to sustainability In collaboration with the Forum on Religion and Ecology an established network of leading scholars it explores a wide range of topics and perspectives from the promise and problems of approaching sustainability through global and indigenous religions to major theories in philosophy and environmental ethics and professional practices and social movements This volume presents the various goals of sustainability ecological integrity economic health human dignity fairness to the future and social justice and provides a framework for reasoning through many interrelated environmental challenges for both current and future generations
