Nature Of Expertise In Professional Acting A Cognitive View:

The Nature of Expertise in Professional Acting Helga Noice, 2013-04-15 For nearly 25 years expertise has been considered an important testing ground for theories of cognition. Cognitive scientists have examined experts as diverse as chess masters, waiters, field hockey players, and computer programmers. Recently, increased attention has been given to the arts, including dance, music, appreciation and performance, and literary analysis. It is therefore somewhat surprising that except for the authors' program of research dating from the late 1980s, virtually no studies on the cognitive processes of professional actors can be found in the literature. These experts not only routinely memorize hours of verbal material in a very short time but they retrieve it verbatim along with the accompanying gestures, movements, thoughts, and emotions of the characters. The mental processes involved in this task constitute the subject of this recent research and are described in detail in this book.

Expertise, Pedagogy and Practice David Simpson, David Beckett, 2018-02-05 Expertise, Pedagogy and Practice takes as its focus recent work on situated and embodied cognition, the concepts of expertise, skill, and practice, and contemporary pedagogical theory. This work has made important steps towards overcoming traditional intellectualist and individualist models of cognition, group interaction, and learning but has in turn generated a number of important questions about the shape of a model that emphasizes learning and interaction as situated and embodied. Bringing together philosophers, cognitive scientists, and education theorists, the collection asks and explores a variety of different questions: Can a group learn? Is expertise distributed? How can we make sense of a normative dimension of expertise or skill? How situation specific is expertise? How can groups shape or generate expert practice? Through these lenses, this collection advances a more experientially holistic approach to the characterisation and growth of human expertise. This book was originally published as a special issue of *Educational Philosophy and Theory*.
