Nature Conservation In Britain The Formative Years:

Nature Conservation in Britain John Sheail,1998 In reviewing the first half century of official involvement in nature conservation this book offers insight into changing attitudes towards town countryside and coast and trends in ecological thinking and practical land use management It explains how nature conservation had achieved such stature within the wider environmental movement The text should be of interest to environmentalists and those with a professional academic leisure interest in the outdoors

Nature Conservation in Europe Graham Tucker,2023-05-25 A detailed description and analysis of European nature conservation and its achievements focussing on the EU and last forty years

An Environmental History of Twentieth-Century Britain John Sheail,2017-03-14 Environmental history the history of the relationship between people and the natural world is a dynamic and increasingly important field In *An Environmental History of Twentieth Century Britain* John Sheail breaks new ground in illustrating how some of the most pressing concerns came to be recognised and a response made Much use is made of archival sources in tracing a number of key issues including Management of change by central and local government The manner in which natural processes were incorporated in projects to protect personal and public health and ultimately environmental health New beginnings in forestry The emergence of a third force alongside farming and forestry in the countryside Management of a transport revolution and mitigation of environmental hazards Such instances of policy making are reviewed within the wider context of a growing awareness both on the part of government and business of the role of environmental issues in the creation of wealth and social well being for us all *An Environmental History of Twentieth Century Britain* is essential reading for all those concerned with these issues

Exploring Environmental History T. C Smout,2011-08-16 This volume brings together the best of T C Smout s recent articles and contributions to books and journals on the topic of environmental history

Warde,2009-07-23 Environmental History as a distinct discipline is now over a generation old with a large and diverse group of practitioners around the globe This book provides a reflection on the achievements diversity and direction of environmental history in its varied national international and continental contexts

Urban Planning and Real Estate Development John Ratcliffe,Michael Stubbs,Mark Shepherd,2004 The second edition of *Urban Planning and Real Estate Development* deals with the planning and development dimensions of land management The student is guided through the procedural and practical aspects of developing land from the perspective of both regulatory agencies and the developer In this edition the sections addressing dispute resolution urban regeneration and probity have been revised and updated New material addressing the private finance initiative sustainable development urban regeneration the renaissance in urban living and the experience economy has been added This textbook is intended for undergraduate and postgraduate students and explains the key dimensions of property development and town planning It should be of interest to students of real estate estate management land management and land economy

What is Land For? Matt Lobley,Michael Winter,2009-12 In recent decades

agricultural commodity surpluses in the developed world have contributed to a mantra of land surplus in which set aside extensification alternative land uses and wilding have been key terms in debates over land. Quite suddenly all this has changed as a consequence of rapidly shifting commodity markets. Prices for cereals, oil seeds and other globally traded commodities have risen sharply. A contributor to this has been the shift to bioenergy cropping fuelled by concerns over post peak oil and climate change. Agricultural supply chain interests have embraced the new environmentalism of climate change with enthusiasm proudly proclaiming the readiness of the industry to produce both food and energy crops and to do so with a neo liberal confidence in markets to determine the balance between food and non food crops in land use. But policy and politics have not necessarily caught up with these market and industry led changes and some environmentalists are beginning to challenge the assumptions of the new productivism. Is it necessarily the case they ask that agriculture's best contribution to tackling climate change is to grow bioenergy crops or invest in anaerobic digesters or make land over for windfarms? Might not there be an equally important role in maximising the carbon sequestration or water holding properties of biodiverse land? What is Land For tackles these key cutting edge issues of this new debate by setting out a baseline of evidence and ideas.

Histories of Technology, the Environment and Modern Britain Jon Agar, Jacob Ward, 2018-04-09

Histories of Technology, the Environment and Modern Britain brings together historians with a wide range of interests to take a uniquely wide lens view of how technology and the environment have been intimately and irreversibly entangled in Britain over the last 300 years. It combines for the first time two perspectives with much to say about Britain since the industrial revolution: the history of technology and environmental history. Technologies are modified environments just as nature is to varying extents engineered. Furthermore, technologies and our living and non living environment are both predominant material forms of organisation and self organisation that surround and make us. Both have changed over time in intersecting ways. Technologies discussed in the collection include bulldozers, submarine cables, automobiles, flood barriers, medical devices, museum displays and biotechnologies. Environments investigated include bogs, cities, farms, places of natural beauty and pollution, land and sea. The book explores this diversity but also offers an integrated framework for understanding these intersections.

England's Green David Matless, 2024-08-12

A sweeping history of how ecological challenges have shaped English society over the last sixty years. **England's Green** explores how environmental concerns have shaped and reflected English national identity since the 1960s. From agriculture to leisure, climate change, folklore, archaeology and religion, David Matless shows how national environmental debates connect to the local, regional, global and postcolonial worlds. Moving across a breadth of material including government policy, popular music, ecological polemic and television comedy, **England's Green** shows the richness and complexity of English environmental culture. Along the way, Matless tracks how today's debates over climate and nature, land and culture have been molded by events over the past sixty years.

Nature's Spectacle John

Sheail, 2014-06-17 National parks have always been an emotive and iconic symbol ever since the first parks of the modern era.

were created in the mid nineteenth century This book based on original research delves deeply into their character and significance and the larger context in which they developed The book celebrates the deserved attractiveness of the parks as wilderness or spectacle to millions of visitors but also emphasises how there was nothing inevitable self sustaining or without cost in their magnificence and accessibility Those early parks were a powerful unifying force as national playgrounds especially as motor transport democratised their use However they also provoked bitter conflict in their dispossession of local communities and perhaps deliberate segregation of people from scenery and wildlife That first century of national parks which concluded with the significant break of the Second World War and the subsequent development of more international approaches to conservation left an uncertain legacy It was a fragile foundation from which to build what became an integral part of today s conservation movement

Woodland Flowers Keith Kirby, 2020-08-06 A meticulously researched important and beautiful volume that goes well beyond the scope of its title to describe the hitherto neglected subject of woodland flora and place it in a broad ecological and historical context Stehan Buczacki Observing the plants of the forest floor the flowers ferns sedges and grasses can be a vital way of understanding our relationship with British woodland They tell us stories about its history and past management and can be a visible sign of progress when we get conservation right For centuries woodland plants have also been part of our lives in practical ways as food and medicines and they have influenced our culture through poetry perfume and pub signs In this insightful and original account Keith Kirby explores how woodland plants in Great Britain have come to be where they are coped with living in the shade of their bigger relatives and responded to threats in the form of storms fires floods the attentions of grazing herbivores and the effects of the changing seasons Along the way the reader is introduced to the work of important botanists who have walked the woods in the past collecting information on where plants occur and why In depth profiles of some of our most important and popular ground flora species provide extra detail and insight Beautifully illustrated Woodland Flowers is a must for anyone who appreciates and wants to learn more about British woodland and its plants

The Struggle for the Long-Term in Transnational Science and Politics Jenny Andersson, Eglė Rindzevičiūtė, 2015-04-10 This book reconsiders the power of the idea of the future Bringing together perspectives from cultural history environmental history political history and the history of science it investigates how the future became a specific field of action in liberal democratic state socialist and post colonial regimes after the Second World War It highlights the emergence of new forms of predictive scientific expertise in this period and shows how such forms of expertise interacted with political systems of the Cold War world order as the future became the prism for dealing with post industrialisation technoscientific progress changing social values Cold War tensions and an emerging Third World A forgotten problem of cultural history the future re emerges in this volume as a fundamentally contested field in which forms of control and central forms of resistance met as different actors set out to colonise and control and others to liberate The individual studies of this book show how the West European African Romanian and Czechoslovak long term was

constructed through forms of expertise computer simulations and models and they reveal how such constructions both opened up new realities but also imposed limits on possible futures

The Environment Paul Warde, Libby Robin, Sverker Sörlin, 2021-01-05 An in depth look at the history of the environment Is it possible for the economy to grow without the environment being destroyed Will our lifestyles impoverish the planet for our children and grandchildren Is the world sick Can it be healed Less than a lifetime ago these questions would have made no sense This was not because our ancestors had no impact on nature nor because they were unaware of the serious damage they had done What people lacked was an idea a way of imagining the web of interconnection and consequence of which the natural world is made Without this notion we didn't have a way to describe the scale and scope of human impact upon nature This idea was the environment In this fascinating book Paul Warde Libby Robin and Sverker Sörlin trace the emergence of the concept of the environment following World War II a period characterized by both hope for a new global order and fear of humans capacity for almost limitless destruction It was at this moment that a new idea and a new narrative about the planet wide impact of people's behavior emerged closely allied to anxieties for the future Now we had a vocabulary for talking about how we were changing nature resource exhaustion and energy biodiversity pollution and eventually climate change With the rise of the environment the authors argue came new expertise making certain kinds of knowledge crucial to understanding the future of our planet The untold history of how people came to conceive to manage and to dispute environmental crisis The Environment is essential reading for anyone who wants to help protect the environment from the numerous threats it faces today

Nature's Diplomats Raf De Bont, 2021-05-11 Nature's Diplomats explores the development of science based and internationally conceived nature protection in its foundational years before the 1960s the decade when it launched from obscurity onto the global stage Raf De Bont studies a movement while it was still in the making and its groups were still rather small revealing the geographies of the early international preservationist groups their social composition self perception ethos and predilections their ideals and strategies and the natures they sought to preserve By examining international efforts to protect migratory birds the threatened European bison and the mountain gorilla in the interior of the Belgian Congo Nature's Diplomats sheds new light on the launch of major international organizations for nature protection in the aftermath of World War II Additionally it covers how the rise of ecological science the advent of the Cold War and looming decolonization forced a rethinking of approach and rhetoric and how old ideas and practices lingered on It provides much needed historical context for present day convictions about and approaches to the preservation of species and the conservation of natural resources the involvement of local communities in conservation projects the fate of extinct species and vanished habitats and the management of global nature

Conflicts in Conservation Stephen M. Redpath, R. J. Gutiérrez, Kevin A. Wood, Juliette C. Young, 2015-05-07 Conflicts over the conservation of biodiversity are increasing and are serious obstacles to wildlife conservation efforts worldwide Changing patterns in land use over exploitation pollution climate change and the threat posed

by invasive species all challenge the way we currently maintain and protect biodiversity from the local management of single species to the international management of resources Integrating approaches from different academic disciplines policy makers and practitioners this volume offers a radically new cross disciplinary multi scale approach to deal with conflicts Groundbreaking strategies for conservation are analysed and a large section of the book is devoted to exploring case studies of conflict from around the world Aimed primarily at academics researchers and students from disciplines relating to conservation ecology natural resources management and environmental governance this book will be equally valuable to conservation NGOs and practitioners and the policy community at national and international levels **The Politics of Love**

Carla Christina Hustak, 2024-02-13 *The Politics of Love* explores the entanglement of emotions social movements and science in reconfiguring human and nonhuman relations As Darwin s evolutionary theory informed the development of sexual science and the sex reform movement between the 1890s and the 1920s sex reformers emerged as a group of diverse and culturally influential professionals doctors psychologists artists political activists novelists and academics who shared a profound commitment to changing the world by changing the practice of sex Sex reformers reinvented love as a scientific practice of sex that brought humans and nonhumans into the fold of early twentieth century racial gender and sexual politics Carla Christina Hustak illuminates how sex reformers insistence that love can shift human and nonhuman relations is more than just a historical narrative it is a moment in time interconnected with urgent contemporary concerns over the global implications of our emotional relationships to other humans animals the earth and atmospheric and technological forces

Shallow Lakes in a Changing World Ramesh D. Gulati, Eddy Lammens, Niels DePauw, Ellen Van Donk, 2007-11-03 This volume comprises the proceedings of the 5th International Symposium on Shallow Lakes held at Dalfsen The Netherlands in June 2005 The theme of the symposium was Shallow Lakes in a Changing World and it dealt with water quality issues such as changes in lake limnology especially those driven by eutrophication and pollution increased nutrient loading and productivity perennial blooms of cyanobacteria and loss of biodiversity *Invasive and Introduced Plants and Animals* Ian D.

Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including

biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate

Heathland Clive Chatters, 2021-03-04 In Clive we have an ever fascinating guide to Britain's heathery districts not only marvelling at the wildlife of such wild places but also celebrating their diverse origins uses and cultural resonances Andrew Byfield Heathlands are so much more than simply purple carpets of heather They are ancient landscapes found throughout Britain that support a complex of inter related species and an immense diversity of habitats They also possess a unique human history defined by the struggle between pastoralism and the competing demands of those who seek exclusive use of the land In this latest addition to the British Wildlife Collection Clive Chatters introduces us to Britain's heathlands and their anatomy He then takes the reader on a geographical heathland tour from the maritime sub arctic of the Shetlands to the mild wetness of the Atlantic coast with an in memoriam nod to those heaths that have been erased from common memory and understanding He concludes with a review of how people have perceived and used heathland wildlife over the ages and sets out a future vision for this iconic landscape its unique habitats and the species that live there Most of our heaths are pale shadows of their former selves However Chatters argues it is not inevitable that the catastrophic losses of the recent past are the destiny of our remaining heaths Should we wish their place in the countryside as an integral part of British culture can be secured

Natural Heritage Peter Howard, Thymio Papayannis, 2013-10-18 It has become more and more accepted that nature conservation is not possible without taking into account human activities Thus an integrated approach to both the natural and cultural heritage is being encouraged and developed Gathering a number of distinguished authors with diverse backgrounds from a religious leader to academics to conservation scientists the book aims to investigate the relationship between human beings and nature between nature and culture Looking at nature as heritage of the human race is a recognition both of the tremendous impacts both positive and negative that human activities have had on the natural environment as well as the acceptance of human responsibility for managing our planet in a sustainable and sensitive manner The texts included examine this interface between human beings and nature in specific places from the Everglades in Florida and Mont Saint Michel in Atlantic France to the UK Europe and the Mediterranean as well as on a theoretical basis and in the context of the international biodiversity conventions
