Autonomous Nature investigates the history of nature as an active often unruly force in tension with nature as a rational logical order from ancient times to the Scientific Revolution of the seventeenth century Along with subsequent advances in mechanics hydrodynamics thermodynamics and electromagnetism nature came to be perceived as an orderly rational physical world that could be engineered controlled and managed Autonomous Nature focuses on the history of unpredictability why it was a problem for the ancient world through the Scientific Revolution and why it is a problem for today The work is set in the context of vignettes about unpredictable events such as the eruption of Mt Vesuvius the Bubonic Plague the Lisbon Earthquake and efforts to understand and predict the weather and natural disasters This book is an ideal text for courses on the environment environmental history history of science or the philosophy of science *The Nature of Time: Geometry, Physics and Perception* R. Buccheri, Metod Saniga, William Mark Stuckey,2012-12-06

There are very few concepts that fascinate equally a theoretical physicist studying black holes and a patient undergoing seriolls mental psychosis Time undoubtedly can well be ranked among them For the measure of time inside a black hole is no less bizarre than the perception of time by a schizophrenic who may perceive it as completely suspended standing still or even reversing its direction The nature of time is certainly shrouded in profound mystery This perhaps since the concept entails multifarious and occasionally incongruous facets No wonder the subject attracts the serious attention of scholars on the one hand and of the lay public on the other Our Advanced Research Workshop is an excellent il lustration of this point as the reader will soon discover It turned out to be a unique professional forum for an unusually lively effective and fruitful exchange of ideas and beliefs among 48 participants from 20 countries worldwide selected out of more than a hundred applicants The present book is based on the select talks presented at the meeting and aims to provide the interested layperson and specialist alike with a multidisciplinary sampling of the most up to date scholarly research on the nature of time It represents a coherent state of the art volume showing that research relevant to this topic is necessarily interdisciplinary and does not ignore such delicate issues as altered states of consciousness religion and metaphysics
