the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation *Book Review Index*, 2004 Every 3rd issue is a quarterly cumulation *Information Technology Outlook 2002 ICTs and the Information Economy* OECD, 2002-06-21 This volume describes the main trends in industries and businesses supplying IT goods and services It looks at the impact of IT diffusion and applications as well as the growing importance of network effects as the use of IT expands *Proceedings of the Second Global Forum on Space Information for Sustainable Development* Ge Luo, 2025-04-27 This proceedings book gathers the latest research presented at the Second Global Forum on Space Information for Sustainable Development GFSISD 2024 which hosted by China Association of Remote Sensing Application CARSA supported by Guangzhou Association For Science Goal 14 Life Below Water which emphasizes the sustainable use of marine resources and Goal 15 Life On Land which focuses on the sustainable use of terrestrial ecosystems Furthermore the publication covers the methodologies and applications of remote sensing sensors both optical and radar that contribute to sustainability efforts Contributors to these proceedings include distinguished scholars and industry leaders from across the globe This collection serves as a valuable resource for researchers students professionals and policymakers involved in space science information science earth and environmental sciences and sustainable development *International Handbook of Research in History, Philosophy and Science Teaching* Michael R. must dovetail with learning about science this handbook is uniquely positioned as a locus for the discussion The handbook features sections on pedagogical theoretical national and biographical research setting the literature of each tradition in its historical context It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching and that lessons can be learnt from these engagements for the resolution of current theoretical curricular and pedagogical questions that face teachers and administrators Science educators will be grateful for this unique encyclopaedic handbook Gerald Holton Physics Department Harvard University This handbook gathers the fruits of over thirty years research by a growing international and cosmopolitan community Fabio Bevilacqua Physics Department University of Pavia
