**Salmonid Fisheries** Paul Kemp, 2011-06-13. Salmonid Fisheries is a landmark publication concentrating on river management, habitat restoration and rehabilitation, disseminating lessons learnt in relation to the intensively studied salmonids that are applicable to future interventions, not just for salmonid species but for other non salmonid species, biota and ecosystems. The contents of this book are the product of the Atlantic Salmon Trust's 40th Anniversary Conference held in association with the Game and Wildlife Conservation Trust. Drawing together carefully edited contributions from many of the world leaders in river restoration from academia, commercial management and government agencies, this important book highlights the need to view river management from the context of the catchment and to adopt an ecosystem based approach to restoration. The book is broadly divided into two sections which discuss first the status of current understanding concerning the relationship between lotic habitat management, the response of salmonid fisheries and the theory of river restoration and secondly the application of this to habitat management and river restoration. Salmonid Fisheries is an extremely valuable work of reference for fisheries managers, ecologists, environmental scientists, fish biologists, conservation biologists and geomorphologists. Libraries in all universities and research establishments where biological and earth sciences and fisheries management are studied or taught should have copies of this book on their shelves. Contributions from a wide range of well known experts. Published in association with the Atlantic Salmon Trust. Habitat management is crucial for dwindling wild salmon populations. Of great importance to aquatic ecologists and fisheries managers.

**The Design of Requirements Modelling Languages** Ivan Jureta,2015-09-30

This book explains in detail how to define requirements modelling languages formal languages used to solve requirement related problems in requirements engineering It moves from simple languages to more complicated ones and uses these languages to illustrate a discussion of major topics in requirements modelling language design The book positions requirements problem solving within the framework of broader research on ill structured problem solving in artificial intelligence and engineering in general Further it introduces the reader to many complicated issues in requirements modelling language design starting from trivial questions and the definition of corresponding simple languages used to answer them and progressing to increasingly complex issues and languages In this way the reader is led step by step and with the help of illustrations to learn about the many challenges involved in designing modelling languages for requirements engineering The book offers the first comprehensive treatment of a major challenge in requirements engineering and business analysis namely how to design and define requirements modelling languages It is intended for researchers and graduate students interested in advanced topics of requirements engineering and formal language design

Archaeology and Ancient Religion in the American Midcontinent Brad H. Koldehoff,Timothy R. Pauketat,2018-11-06 Analyses of big datasets signal important directions for the archaeology of religion in the Archaic to Mississippian Native North America Across North America huge data accumulations derived from decades of cultural resource management studies combined with old museum collections provide archaeologists with unparalleled opportunities to explore new questions about the lives of ancient native peoples For many years the topics of technology economy and political organization have received the most research attention while ritual religion and symbolic expression have largely been ignored This was often the case because

researchers considered such topics beyond reach of their methods and data In Archaeology and Ancient Religion in the American Midcontinent editors Brad H Koldehoff and Timothy R Pauketat and their contributors demonstrate that this notion is outdated through their analyses of a series of large datasets from the midcontinent ranging from tiny charred seeds to the cosmic alignments of mounds they consider new questions about the religious practices and lives of native peoples At the core of this volume are case studies that explore religious practices from the Cahokia area and surrounding Illinois uplands Additional chapters explore these topics using data collected from sites and landscapes scattered along the Mississippi and Ohio River valleys This innovative work facilitates a greater appreciation for and understanding of ancient native religious practices especially their seamless connections to everyday life and livelihood The contributors do not advocate for a reduced emphasis on technology economy and political organization rather they recommend expanding the scope of such studies to include considerations of how religious practices shaped the locations of sites the character of artifacts and the content and arrangement of sites and features They also highlight analytical approaches that are applicable to archaeological datasets from across the Americas and beyond
