Interpreting Complex Forensic DNA Evidence Jane Moira Taupin, 2019-11-14 Interpreting Complex Forensic DNA Evidence is a handy guide to recent advances and emerging issues in interpreting complex DNA evidence and profiles for use in criminal investigations In certain cases DNA cannot be connected to a specific biological material such as blood semen or saliva How or when the DNA was deposited may be an issue The possibility of generating DNA profiles from touched objects where there may not be a visible deposit has expanded the scope and number of exhibits submitted for DNA analysis With such advances and increasing improvements in technological capabilities in testing samples this means it is possible to detect ever smaller amounts of DNA There are also many efforts underway to seek ways to interpret DNA profiles that are sub optimal either relative to the amount required by the testing kit and potentially the quality of the obtained sample Laboratories often use enhancements in order to obtain a readable DNA profile The broad reaching implications of improving DNA sensitivity have led to this next emerging generation of more complex profiles Examples partial profiles that do not faithfully reflect the proposed donor or mixtures of partial DNA from multiple people A complexity threshold has been proposed to limit interpretation of poor quality data Research is now addressing the interpretation of transfer of trace amounts of DNA Complex issues are arising in trial that need to be reconciled as such complexity has added challenges to the interpretation of evidence and its introduction or dismissal in certain cases in the courts Key Features Addresses DNA transfer from person to person as well as to objects Outlines each stage required to produce a DNA profile from an exhibit including collection handling storage and analysis Discusses ethics subjectivity and bias including cognitive dissonance as they relate specifically to complex DNA evidence Highlights current techniques and the latest advances in DNA analysis including advances in familial DNA searches Interpreting Complex Forensic DNA Evidence provides tools to assist the criminal investigator forensic expert and legal professional when posed with a DNA result in a forensic report or testimony The result and any associated statistic may not reveal any ambiguity complexity or the assumptions involved in deriving it Questions from resolved criminal cases are posed and the relevant forensic literature provided for the reader to assess a DNA result and any associated statistic Case studies throughout illustrate concepts and emphasize the need for conclusions in the forensic report that are supported by the data

American Men and Women in Medicine, Applied Sciences and Engineering with Roots in Czechoslovakia Miloslav Rechcigl Jr., 2021-02-17 No comprehensive study has been undertaken about the American learned men and women with Czechoslovak roots The aim of this work is to correct this glaring deficiency with the focus on men and women in medicine applied sciences and engineering It covers immigration from the period of mass migration and beyond irrespective whether they were born in their European ancestral homes or whether they have descended from them This compendium clearly demonstrates the Czech and Slovak immigrants including Bohemian Jews have brought to the New World in these areas their talents their ingenuity the technical skills their scientific knowhow as well as their humanistic and spiritual upbringing reflecting upon the richness of their culture and traditions

developed throughout centuries in their ancestral home This accounts for their remarkable success and achievements of these settlers in the New World transcending through their descendants as this publication demonstrates The monograph has been organized into sections by subject areas i e Medicine Allied Health Sciences and Social Services Agricultural and Food Science Earth and Environmental Sciences and Engineering Each individual entry is usually accompanied with literature and additional biographical sources for readers who wish to pursue a deeper study The selection of individuals has been strictly based on geographical vantage without regards to their native language or ethnical background Some of the entries may surprise you because their Czech or Slovak ancestry has not been generally known What is conspicuous is a large percentage of listed individuals being Jewish which is a reflection of high level of education and intellect of Bohemian Jews A prodigious number of accomplished women in this study is also astounding considering that in the 19th century they rarely had careers and most professions refused entry to them

Science Funding Joseph Paul Martino,1992-01-01

Americans have become resigned to seeing Congress vote money for porkbarrel projects of all kinds roads dams post offices military installations in the districts of influential legislators In recent years Congress has almost without public notice extended this form of vote buying and pandering into a new domain science Where formerly scientific funding proposals were evaluated by outside experts on the basis of merit there is now an increasing consideration of congressional districts and fair geographical distribution In this ground breaking volume Joseph P Martino offers a critical examination of special interest funding and the danger it poses to the integrity of American society as a whole as well as to its scientific component Science Funding is distinguished by its comprehensive approach to the structural and historical background of the current situation It examines the history of science funding from the early twentieth century through present public vs to taxpayers instances of fraud and the effects of government funding for research in universities Martino s survey demonstrates conclusively that government has been inefficient in its funding capacity and that the shortcomings are inherent political criteria for the support of science congressional micromanagement freezing out of innovative ideas and the favoring of massive projects Big Science over small but significant experimental programs In his concluding chapter Martino provides an agenda for new thinking on the funding of science He proposes alternatives that suggest a plurality of approaches is preferable to the current monolithic model and shows how industrial support philanthropy and contributions from the public can be made more effective Science Funding is a major work on the interaction of science politics and society It will be of interest to sociologists policymakers and political scientist and the research science community
