**Regional input-output study** Walter Isard, 1971      *Input-Output Analysis* Ronald E. Miller, Peter D. Blair, 2009-07-30

This edition of a classic textbook is an essential reference for students and scholars in the input output research and applications community. New topics covered include SAMs and extended input output models and their connection to input output data structural decomposition analysis, SDA multiplier decompositions identifying important coefficients and international input output models.

**On the use of input-output models for regional planning** William Shafer, 2012-12-06. This book attempts to show in a style acceptable to both academics and hurried planning executives how simple analytic tools may be used to bridge the substantial gap between producing an input output table and using one. In pursuing this goal we eschew all discussions of complex programming models for example and concentrate on above all interpretation of the transactions table itself on such common tools as multipliers impact analysis projections models and self sufficiency analysis and on a few innovations such as income per employee indices development simulators and market analysis routines. Our primary purpose has been to show how planners both private and public can use regional input output analysis quickly and to their advantage. The Georgia Interindustry Study was sponsored by the Office of Planning and Budget and the Department of Industry and Trade of the State of Georgia; their support is gratefully acknowledged. The final study report of which this book represents a substantial revision benefited enormously from the support and incisive criticisms of Dr. William W. Nash, then with the Office of Planning and Budget; his efforts are warmly appreciated. Many other officials in Georgia government contributed to this study including Louis Schneider and Kenneth P. Johnson in the Office of Planning and Budget; James O. Bohanan, James Butler, George Rogers and H. W. Wiley in the Department of Industry and Trade; Joe Woodall and Corine Cross in the Department of Labor; William M. Nixon in the Department of Audits and J. B.      Rethinking

Input-Output Analysis Jan Oosterhaven, 2022-06-17. This textbook helps students to understand the social, economic and environmental importance of the mutual relations between industries in the same and in different regions and nations and demonstrates how to model these relations using regional, interregional and international input output IO models. It enables readers to extend these basic IO models with endogenous household expenditures to employ supply use tables (SUTs) that explicitly distinguish the products used and sold by industry and to use social accounting matrices (SAMs) that detail the generation, redistribution and spending of income. In addition to the standard demand driven IO quantity model and its accompanying cost push IO price model, the book also discusses the economic assumptions and usefulness of the supply driven IO quantity model and its accompanying revenue pull IO price model. The final chapters highlight three main applications of the IO model: 1. economic impact analysis of negative supply shocks as caused by, for example, natural disasters; 2. linkages key sector and cluster analysis; 3. structural decomposition analysis especially of regional, interregional and international growth and demonstrate the strengths and weaknesses of these IO applications. Written for graduate students.

of regional and spatial science as well as for economists and planners this book provides a better understanding of the foundations the power the applicability and the limitations of input output analysis The second completely revised edition expands on updating IO tables modelling the disaster reconstruction phase and includes an appendix on the necessary matrix algebra

Frontiers of Environmental Input-Output Analysis Shigemi Kagawa, 2011-08-26 Input Output Analysis IOA is widely used in the field of ecological economics industrial ecology and environmental sciences Industrial Ecology IE and Ecological Economics EE are promising and growing fields IOA plays a crucial role in analyzing the related environmental and resource issues and providing quantitative information to many research questions and policy implications The major aim of this book is to provide not only a comprehensive overview of environmental IOA from 1930s to the present but also the frontiers of environmental IOA including energy structural decomposition analysis spatial energy structural decomposition analysis multi regional waste make use analysis augmented waste input output analysis dynamic structural decomposition analysis with product lifetime distributions and endogenous input output analysis with product lifetime distributions to professionals practitioners and students This book presents a novel dynamic structural decomposition analysis to evaluate the effects of the product lifetime shifts and structural changes such as technological changes and final demand shifts on the life cycle energy consumptions It also contributes to modelling a simple social accounting method with cumulative product lifetime distributions and argues how product lifetime extension affects energy consumptions and income flow throughout the entire economic system The book demonstrates the author's expertise in IOA and is an essential read for students and scholars in the field

*Regional Economic Planning* R. C. Jensen, T. D. Mandeville, N. D. Karunaratne, 2017-09-05 Originally published in 1979 Decision makers at all levels need sufficiently detailed information on regional economic structure in order to undertake consistent and comprehensive regional planning A means is put forward here elevating the impracticable regional input output method to that of an operational planning technique This development represents a system which facilitates the examination both of the economic structure of individual regions in reasonable detail and of the regional structure of the state economy The technique termed the Generation of Regional Input Output Tables GRIT is designed for general use in the production of regional input output tables and other data sources contributing towards the holistic accuracy of the table thereby providing accurate maximisation of input output tables within a given budget constraint

Great Minds in Regional Science, Vol. 3 Peter Batey, David Plane, 2025-07-31 This book is the third volume in a series on Great Minds in Regional Science which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science This volume presents among others Walter Christaller Benjamin H Stevens William Alonso and Francois Perroux Each chapter combines factual biographical information about the Great Mind a description of their major contributions and a discussion of the broader context of their work as well as an assessment of its current relevance scientific recognition and policy impact The book attempts to fill a gap in our knowledge and to respond to the growing

interest in the formation and development of the field of regional science and its key influential figures
