Canada Natalia A. Ruppert, Margarete A. Jadamec, Jeffrey T. Freymueller, 2024-12-11 *Tectonics and Seismic Structure of Alaska and Northwestern Canada EarthScope and Beyond* The northwest of the North American continent is geologically dynamic and tectonically active. A network of seismic and geodetic instruments deployed across the region as part of the EarthScope project provided data crucial to understanding its geological tectonic and seismic processes. *Tectonics and Seismic Structure of Alaska and Northwestern Canada EarthScope and Beyond* presents review papers and new scientific studies using EarthScope data to advance understanding of the region's structure, seismic activity, and geodynamic processes. About this volume: Describes the infrastructure and capabilities of the EarthScope seismic and geodetic networks. Draws from a comprehensive set of geophysical data. Includes field studies, laboratory analyses, and numerical modeling. Spans processes from the Earth's interior and the lower mantle to the crust and surface. Covers examples from subduction zones, fault systems, and some of the largest recorded earthquakes. Provides scientific explanations for the natural landscapes and ongoing movements shaping the northwest of the North American continent. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals.

**Postcollisional Tectonics and Magmatism in the Mediterranean Region and Asia** Yildirim Dilek, Spyros Pavlides, 2006-01-01 The Mediterranean region and Asia provide a natural laboratory to investigate the driving forces of continental tectonics in an ongoing collisional orogen and the crustal and mantle response to various modes of deformation associated with plate boundary processes. The multidisciplinary research efforts in this region over the last fifteen years have produced a wealth of new data to better understand the interplay and feedback mechanisms between crustal and mantle processes and the dynamic landscape evolution in a complexly deforming area. A number of discrete collisional events between the Gondwana-derived continental fragments, i.e., Adria, Pelagonia, Arabia, India, and Eurasia, controlled the geodynamics of the Mediterranean region and Asia during the late Mesozoic and Cenozoic. This book is a collection of research papers presenting new data, interpretations, and syntheses on various aspects of the collision-induced tectonic, magmatic, metamorphic, and geomorphic processes that have affected the evolution of this orogenic belt. It should help us better understand the mode and nature of tectonic and magmatic processes and crustal evolution in active collision zones and the distribution and causes of seismic and volcanic events and their impact on landscape evolution.
