Multiregional Economic Modeling Boris Issaev,1982      *The Theory, Practice and Potential of Regional Development* Kelly Vodden,David J.A. Douglas,Sean Markey,Sarah Minnes,Bill Reimer,2019-07-04 Canadian regional development today involves multiple actors operating within nested scales from local to national and even international levels Recent approaches to making sense of this complexity have drawn on concepts such as multi level governance relational assets integration innovation and learning regions These new regionalist concepts have become increasingly global in their formation and application yet there has been little critical analysis of Canadian regional development policies and programs or the theories and concepts upon which many contemporary regional development strategies are implicitly based This volume offers the results of five years of cutting edge empirical and theoretical analysis of changes in Canadian regional development and the potential of new approaches for improving the well being of Canadian communities and regions with an emphasis on rural regions It situates the Canadian approach within comparative experiences and debates offering the opportunity for broader lessons to be learnt This book will be of interest to policy makers and practitioners across Canada and in other jurisdictions where lessons from the Canadian experience may be applicable At the same time the volume contributes to and updates regional development theories and concepts that are taught in our universities and colleges and upon which future research and analysis will build      **Rational Expectations in Macroeconomic Models** P.

Fisher,2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific subjects include i solving for model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i e the effect of temporary vs permanent anticipated vs unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research Group in Macroeconomics the London Business School and the National Institute of Economic and Social Research      **Handbook on**
