Energy Research Abstracts ,1978 Non-Proliferation Stockholm International Peace Research Institute, 2020-11-19 Is the appearance of new nuclear weapon states inevitable Who are the sponsors and apologists of nuclear weapons and why are others in favour of renouncing them What are the implications for international security of the increasingly wide use of nuclear energy How can nuclear threats be defused Originally published in 1985 SIPRI's study suggests some answers to these questions The book examines the situation in a number of countries of key importance for non proliferation the two nuclear weapon states which have declined to join the 1968 Non Proliferation Treaty China and France a group of nuclear threshold states also remaining outside the Treaty Argentina Brazil India Israel Pakistan South Africa and Spain and a group of states both developed and developing which for various reasons have joined the Treaty Canada Egypt South Korea Sweden Switzerland and Taiwan The focus of the book is on motivations for and against nuclear proliferation An analysis of these motivations leads the editor to make detailed recommendations aimed at halting the spread of nuclear weapons Appendices include a list of nuclear facilities in the countries studied specifying the degree of their coverage by international controls and other relevant documentation **The United Nations Disarmament Yearbook** ,1980 *Nuclear Proliferation: Future U.S. Policy Implications* United States. Lauwaars, 2024-12-02 **Nuclear Proliferation and International Security** Sverre Lodgaard, Bremer Maerli, 2007-06-11 The Nuclear Non Proliferation Treaty has long been key in non proliferation and disarmament activities The Treaty is the major international legal obstacle for states seeking nuclear weapon capabilities In retrospect and despite setbacks the overall impact of the Nuclear Non Proliferation Treaty has been significant and gratifying Its continued success is by no means guaranteed As old nuclear dangers persist and new ones evolve policies to halt nuclear proliferation are more disparate than at any other time Nuclear weapons remain an essential part of the security policies of leading states and many developmental states maintain strong nuclear weapon ambitions while terrorists have actively been seeking nuclear capabilities In search of an overarching strategy that recognizes both the flaws

of the existing non proliferation regime and the value of some of the corrections proposed by regime critics this volume assesses contemporary efforts to stem nuclear proliferation In doing so Nuclear Proliferation and International Security examines a number of cases with a view to recommending better non proliferation tools and strategies The contributors comprise renowned international scholars who have been selected to obtain the best possible analyses of critically important issues related to international non proliferation dynamics and the future integrity of the Non Proliferation Treaty Export Reorganization Act of 1976 United States. Krass,Peter Boskma,Boelie Elzen,Wim A. Smit,Stockholm International Peace Research Institute,2020-11-20 Originally published in 1983 this book presents both the technical and political information necessary to evaluate the emerging threat to world security posed by recent advances in uranium enrichment technology Uranium enrichment has played a relatively quiet but important role in the history of efforts by a number of nations to acquire nuclear weapons and by a number of others to prevent the proliferation of nuclear weapons For many years the uranium enrichment industry was dominated by a single method gaseous diffusion which was technically complex extremely capital intensive and highly inefficient in its use of energy As long as this remained true only the richest and most technically advanced nations could afford to pursue the enrichment route to weapon acquisition But during the 1970s this situation changed dramatically Several new and far more accessible enrichment techniques were developed stimulated largely by the anticipation of a rapidly growing demand for enrichment services by the world wide nuclear power industry This proliferation of new techniques coupled with the subsequent contraction of the commercial market for enriched uranium has created a situation in which uranium enrichment technology might well become the most important contributor to further nuclear weapon proliferation Some of the issues addressed in this book are A technical analysis of the most important enrichment techniques in a form that is relevant to analysis of proliferation risks A detailed projection of the world demand for uranium enrichment services A summary and critique of present institutional non proliferation arrangements in the world enrichment industry and An identification of the states most likely to pursue the enrichment route to acquisition of nuclear weapons **Regional Nuclear Fuel Cycle Centres** Regional Nuclear Fuel Cycle Centres Study Project,1977 ERDA Energy Research Abstracts United States.
